Pro-Line

Adjustable-Height Steel Cantilever Workbenches

- Load capacity: 750 lb., based on evenly distributed loads
- 1⅝"-thick steel construction and uprights
- Dark blue powder-coated finish
- Workstations measure 30"D

The modular design allows custom workbench configuration. Nonmarking HDPE glides protect floors and make moving unit easy. Standard Grounding Kit 2MXJ3 includes 2 banana jacks and a mounting bracket.

Electric Workstations adjusts with electric hydraulics, making the benches ideal for multiple users. 3-position memory allows workers to preset and access their own height preferences. Assemble workstations with standard tools. 120V.

Starter units with add-on units enable workspace customization. Steel frame-supported work surface is pull pin adjustable (independent of frame) from 30" to 36"H. Frames are 65"H.

Starter Units include work surface, frame, 2 top supports, and 2 horizontal leg supports.

Add-On Units include work surface, frame, 1 top support, and 1 horizontal leg support.

For ESD laminate surfaces; use Standard Optional Ground Kit 2MXJ3 and Wrist Strap 2WXT8, sold separately, to help protect static-sensitive electronics.

Adjustable-Height Workbenches and Accessories

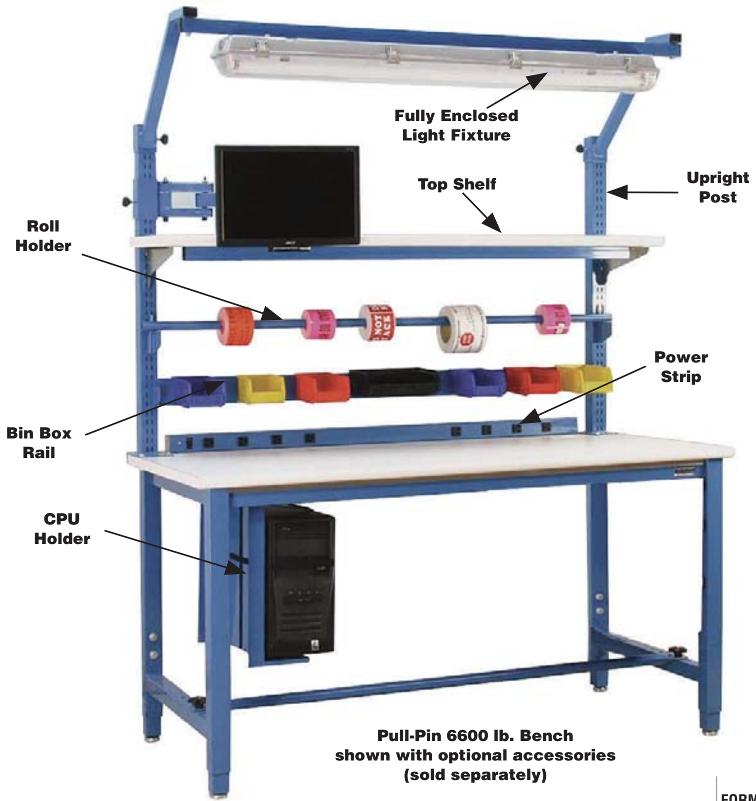
- Chemical- and corrosion-resistant powder-coated finish
- Easy to assemble
- 25-yr. warranty

When ordering Upper Shelf, Light Fixture, Bin Rail, Roll Holder, Articulating Monitor Arm, or Pegboard, Upright Post must be ordered additionally. Tool Balancers include one Tool Balancer Trolley, for additional Trolley, order 12V569.

Workbench with Electric Hydraulic Lift and Hand Crank—1000-lb. capacity workbenches include a heavy-duty leveling glide. Adjust up to 12" in height with either a hand crank or electric hydraulic lift. Legs are constructed with ¼"-thick diagonally welded steel tubing.

Pull-Pin—1600-lb. capacity workbenches are height-adjustable from 30" to 36"H with 13-ga. steel construction. 6600-lb. capacity workbenches provide a sturdy work surface and feature stainless steel trim and ergonomically contoured top.

Fixed Leg—20,000-lb. capacity workbenches feature heavy 3" square legs.



Pull-Pin 6600 lb. Bench shown with optional accessories (sold separately)

Adjustable-Height Steel Work/Machine Tables

- Gray powder-coated finish
- Load capacity: 1500 lb., based on evenly distributed loads
- Ship unassembled

Ideal for use with drill presses, arbor presses, lathes, and benchtop sanders/grinders; provide additional work and storage space. Leg flange on bottom prevents floor surface from being cut. Sturdy, 16-ga. steel top shelf. Full-depth lower shelf provides additional storage and added rigidity.

Stationary Shop Desks w/Hutch

- Locking drawer with recessed pull
- Durable powder-coated finish

These desks consist of a hutch mounted on top of a desk or storage cabinet. The hutch and the base provide shelf storage for large items. Doors conceal and protect contents. The desks also have a writing surface and a drawer that keeps pens and other loose items contained. Stationary shop desks are suitable for areas where they will not be moved often.

Low-Profile Mechanics' Mobile Shop Stools

Mechanics shop stools are less tall than other types of shop stools, and they allow workers to sit while making repairs on cars, machines, and other industrial equipment. Also known as maintenance repair stools and tool trolley stools, they have built-in storage for tools. These mobile shop stools have casters that allow them to roll when users need to move the stool. Seats adjust using a pneumatic lever.

ESD Static Control Pneumatic Stools

Electrostatic discharge stools help protect workers from static discharge and environmental pollutants while providing comfortable seating. They are commonly found in labs and work areas with chemicals or sensitive electronic components, such as bioscience, pharmaceutical, and computer applications. These backless stools have pneumatic seats that adjust to an optimal working height. Polyurethane seat with cast aluminum base.

Adjustable Desk Grommet

Flexible Desk Grommet

Self-Adhesive Wall/ Desk Wire Clips

J Style and Locking-Latch Channels

Desk Grommets, Wire Clips, and Channels

Problem Solving Products Master Manufacturing Master Caster · Supplier Diversity

Desk Grommets—Adjustable grommets open to 3 different widths. Flexible grommets can receive multiple wires from any direction.

Wall/Desk Wire Clips—Direct wires around corners or angles, keeping them safely off the floor and out of the way.

Channels—Block wires from view and prevent tangling. Self-adhesive backing. Locking-latch channels deter overstuffing; nonlocking ("J"-style) channels are designed for thicker cords.

FireKing®

Fire-Resistant File Cabinets

High-security Medeco key locks resist picking and drilling. UL Class 350 1-hr. fire rating with impact.

VERTICAL AND LATERAL FILE CABINETS

Fire-resistant insulation is 100% gypsum reinforced by a 1" x 2" lattice of 14-ga. galvanized welded-steel wire. Insulation is placed between each drawer to make each a separate fire-resistant container. Scratch-resistant and environmentally-friendly powder-coated finish. Drawer bodies have high sides for hanging files; no additional frames are required.

Safe-In-A-File vertical file cabinets conceal a 2.4 cu. ft. burglary-resistant safe behind a false-top drawer panel.

STORAGE CABINETS

Accommodate oversized documents, binders, or any other valuable items.

Flat Filing Systems

10-Drawer Flat File

FLAT FILE CABINETS

Organize and protect stored documents such as blueprints and drawings with these heavy-duty welded steel files. Hinged paper weights in drawer fronts and hoods at the rear keep papers from curling. Drawers open smoothly and quietly, while sturdy drawer rails help ensure smooth alignment. Drawer stops help prevent accidental drawer pull-out. Each drawer includes 2 pull handles and chrome label holder. Include field-installed lock kit with 2 keys. Durable powder-coated finish.

BASES

Durable powder-coated finish. Shipped unassembled.

Closed—Raise flat files 4" off the floor to ease access. Support up to 5 stacked file units.

Open—Raise a single file unit 20" off the floor. The lower shelf helps provide extra storage space.

Annin FLAGMAKERS

Outdoor Flags

Embroidered stars and reinforced fray-resistant lock-stitched stripes on the fly end of the flag. 6 x 10-ft. and smaller size flags have brass lock grommets; 8 x 12-ft. and larger flags have roped heading. Nylon flags provide the best UV resistance and fly in the lightest breeze. 2-ply spun polyester flags provide the longest wear and resist high winds. For additional Flags, Flag Poles, and Accessories go to Grainger.com.

Standard Copy and Printer Paper

Multipurpose Paper—Multipurpose paper can be used in copiers, laser printers, and plain paper fax machines. Its versatility makes it suitable for small business owners sending and processing work orders, invoices, estimates, and receipts.

Laser Paper—Withstands the high-heat process required to fuse powdered ink, or toner, in place via laser printing. Laser paper produces high-quality color images and text on documents such as design proposals, photographs, flyers, and brochures.

Inkjet Paper—Features high surface strength and even porosity to absorb the liquid ink used in inkjet printing processes. Its structure keeps wet ink from spreading and produces crisp lines for high-quality text and images.

Colored Multipurpose Paper

Suitable for use in both inkjet and laser printers, including copiers and plain paper fax machines. This versatile, matte finish paper is ideal for color-coding documents, such as work orders, invoices, estimates, and receipts for quick identification. Additional colors available on Grainger.com.

Paper Size Name	Sheet Size	Paper Weight	Color	Brand	Item No.	Pkg. Qty.
Letter	8 ½ in x 11 in	20 lb	Green	Universal One	**15U667**	500
Letter	8 ½ in x 11 in	20 lb	Orchid	Universal One	**15U672**	500
Letter	8 ½ in x 11 in	24 lb	Lunar Blue	Neenah Paper	**15U675**	500
Letter	8 ½ in x 11 in	24 lb	Solar Yellow	Neenah Paper	**15U676**	500

15U666

Glossy Finish Photo Paper

Offers a bright photo finish with vibrant white color. This paper is thicker and denser than standard paper, allowing it to absorb ink for high-quality photos and color images. It also dries quickly, which reduces wait times when producing presentation documents and portfolio images.

Paper Size Name	Sheet Size	Paper Weight	Item No.	Pkg. Qty.
A6	4 in x 6 in	11 mil	**15U664**	100
Letter	8 ½ in x 11 in	8 mil	**15U666**	50

Easy Peel—Simply bend the sheet to expose the Pop-up Edge for fast peeling.

EcoFriendly—All label paper and packaging consists of 100% recycled materials using chlorine-free processes that are still 100% recyclable. Soy- and vegetable-based inks are derived from renewable sources.

TrueBlock—Totally opaque labels completely cover old labels and markings to allow re-use of mailing tubes, boxes, and more.

WeatherProof—Durable polyester labels have an extra-strong adhesive that resists the moisture, scuffing, tearing, and smudging that can occur in many harsh environments.

Permanent—Holds tight to many surfaces for permanent labeling, unless otherwise noted.

Repositionable—Can be removed and reapplied without damaging the label or envelope. Labels become permanent over time and are guaranteed to not fall off.

Removable—Labels stick, stay, and can be removed cleanly without leaving any residue.

Numbering Stamps

Bands of numbers and special characters can be configured for custom identification. Self-inking numbering stamps automatically apply fresh ink to the stamp after each use, so they can be operated one-handed and don't require separate ink pads. The stamp's housing is made of metal.

Stamp Pads and Ink Refills

Stamp Ink Pads—Saturated with ink, these felt pads are used with rubber stamps to date and number invoices, or to apply seals to official documents. They are enclosed in resealable cases to prevent ink from drying out. They can be replenished with compatible ink refills.

Stamp Ink Refills—Replenish and extend the life of compatible ink pads, self-inking stamps, and pre-inked stamps.

Permanent Paint Markers

Oil-based valve-action pens make glossy, opaque markings on light or dark surfaces. Fast-drying paint formula resists spreading and running when in contact with water or water-based fluids. Create bright, permanent marks with superior adhesion on surfaces including steel and iron, aluminum, pipes and tubes, plastics, glass, rubber, and ceramic.

Permanent Markers

Felt tips that transfer permanent inks to writing surfaces and building materials. The fast-drying inks are formulated to be waterproof and smear-resistant, making the markers suitable for transferring measurements and cut lines to glass, wood, stone, metal, and some plastics. They can also be used on surfaces that are too moist, oily, or abrasive for pens or pencils.

Gel Pens & Rollerball Pens

- Plastic barrels
- Comfortable cushion grips

Water- and gel-based inks are less viscous than ballpoint inks, offering smoother and bolder writing, but with longer drying time. They are suitable for signing official documents, checks, and work orders.

Shredders Cut Style and Security Level Definitions

Strip-Cut—Shreds paper into strands. This style provides the lowest level of security, and is used for nonsensitive information.

Cross-Cut—Shreds paper both lengthwise and widthwise. These shredders create small pieces rather than strips and are used to shred everyday, nonpersonal paperwork.

Micro-Cut—Cuts paper into tiny bits. These shredders are used for sensitive personal information in law firms, medical practices, and accounting firms.

High-Security—Thoroughly destroys confidential documents. These shredders are for any business that needs to securely dispose of highly sensitive documents.

Security Levels—The higher the assigned security level number, the smaller the shredded pieces will be.

Standard Paper Shredders

HSM®

Intermittent Duty—Require brief rest periods between shredding jobs to keep motors cool and functioning properly.

Continuous Duty—Capable of running continuously, without the need to stop and cool down. These shredders are ideal for high-volume shredding jobs.

HSM®

High-Security Paper Shredders

These continuous-duty shredders with higher security levels are capable of cutting paper into smaller pieces for additional protection against identify theft and fraud.

Paper Only—Paper-only high-security shredders cross-cut paper into small pieces to prevent exposure of sensitive or confidential data.

Paper and More—These shredders cut paper and other materials into thin, small pieces for protection against identity theft and fraud. They are capable of shredding items such as credit cards, staples, and CDs.

HSM®

CD and Hard Drive Shredders

These continuous-duty shredders offer secure disposal of data storage media, including hard drives, credit cards, CDs, DVDs, floppy disks, USB sticks, and magnetic tapes. They reduce the digital data carriers into small particles, making data re-creation or recovery virtually impossible, and reducing the possibility of identify theft and fraud.

HSM®

Cardboard Shredders

Cut and perforate used cardboard to convert it into packing material. The resulting product is a soft, perforated layer of padding that offers an alternative to air bubble packaging. These continuous-duty shredders reduce waste by allowing users to re-use cardboard boxes that would otherwise be discarded.

Shredder Bags and Oils

Shredder Bags—Clear plastic HSM shredder bags fit inside compatible HSM shredders for containing and disposing of shredded particles. They help to keep work areas clean by eliminating messes caused by dumping shredder bins. Recyclable.

Shredder Oil—Petroleum-based circulating mineral oil is designed specifically for use in machines and resists rust, oxidation, and wear. It reduces friction between parts and helps reduce squeaks and other noises.

Desktop Label Printers

High speed label printers quickly create paper labels for packages, envelopes, file folders, name badges, and postage. Auto cutter allows for printing 1 or multiple labels at time, eliminating wasted label sheets. Permit users to create and print customized labels. Compatible with Windows, Linux and Mac and integrates with Microsoft Word, Excel, and Outlook. Free download App allows you to design labels with your mobile device when connected to a wireless network. Up to 300 dpi print resolution for crisp text and graphics. Drop-in rolls require no ink or toner.

QL-800—Create easy-peel Black/Red labels with 420R61, sold separately on Grainger.com. Prints up to 93 labels per minute.

QL-1110NWB and QL-1100—Use direct thermal label printing. Automatic crop function lets on-line sellers easily print barcode labels and other product labels from A4/Letter size label sheet templates (Windows only). Prints up to 69 standard labels per minute.

DYMO

LabelWriter Printers and Labels

Print mailing, filing, and media labels from a variety of software programs. Print up to 71 labels per minute. Feature DYMO Label version 8 software to create and print a variety of labels. DYMO Stamps software (included) allows printing USPS-approved postage. All printers include power supply, USB cable, CD user's guide, quick-start guide, and address labels.

LW450 Turbo—Maximizes efficiency with high-speed label printing.

LW450 Twin Turbo—Labeler can hold 2 label rolls at once for even greater efficiency. Includes stamps.

LW450 Duo—Prints paper and plastic labels: top portion uses white paper label rolls; bottom uses permanent D1 label tape cartridges. Includes stamps and ¾" black on white D1 label cartridge.

LW 4XL—Prints labels up to 4.16"W, including 4.1"W x 6.275"L shipping, warehouse, barcode and identification, bulk mailing, and other large-format labels. Thermal printing technology never requires ink or toner.

D1 LabelManager Printers and Labels

Create smearproof labels using thermal transfer technology. Use D1 label tape cartridges.

LM160 with QWERTY Keyboard—Computer-style QWERTY keyboard allows fast text entry. Choose from 6 font sizes, 8 text styles, and 4 boxes plus underline, as well as 228 symbols and clip art images. Format with 1-touch smart keys for text size, bold, italic, underline/box, and vertical text. Large LCD display allows you to preview an image of your label.

LM210D Labeler and Kit—Labeler has a large semigraphical display that displays label before printing. Prints 6 font sizes, 7 styles, 8 boxes, and underline. Includes a ½" black-on-white label cartridge. Requires 6 AA batteries or AC adapter 5AU10, sold separately on page 370. Kit 2RCJ2 comes with a labeler, two ½" black-on-white label cartridges, 6 AA batteries, AC adapter, and carrying case.

LM360D—Prints up to 4 lines of text with choice of 7 font sizes. 1½" x 2¾" display shows 2 lines of label text. Printer comes with lithium-ion battery, AC adapter, and starter label cartridge.

LM500TS with Touch Screen—Create, edit, and format customized labels directly from the full-color touch screen. Choose from 10 fonts, 25 font sizes, and 5 boxes plus underline, 32 text styles, and 325 built-in symbols and clip art images. Create and save user profiles to store settings and data for up to 5 different users. Computer-style keyboard permits fast text entry, while the automatic label cutter speeds cutting.

D1 Label Tape Cartridges—Tape cartridges are 23 ft. long. Durable, polyester-coated labels are scratch and chemical resistant. All cartridges feature easy-peel, split-back tape.

Handheld Embossing Label Maker and Tape

DYMO

- Accepts ⅜" and ½" tape widths

Office-Mate II Embossing Label Maker—Produces 3/16" H characters by raising the surface of a letter or symbol to make it easier to read or detect rather than using ink. Includes a 0–9 and A–Z character set. Features a jam-free manual tape cutter with automatic tab for easy tape-backing removal. Includes forward and reverse tape control, 0.200" H horizontal character wheel, and one ½" W roll of black vinyl adhesive tape.

Vinyl Embosser Label Tape Rolls—Adhesive labels are designed for indoor or outdoor applications and are more resistant to weather, chemicals, ultraviolet light, and temperature changes than standard paper labels.

Guillotine Paper Cutters

- Steel blade

Guillotine paper cutters have a blade mounted on a hinged arm that is raised and lowered to slice through sheets or stacks of paper. These cutters create professional-quality cuts in documents or thick materials like posterboard or foam. They are ideal for high-volume projects because they cut large amounts of paper accurately in a single pass. Alignment grids on the trimmer base help users create precise cuts. Free Standing cutter is mounted on a wood stand.

Storage Boxes

BANKERS BOX®

BASIC-DUTY

Designed for inactive files.

Stor/File™—Lid ships attached, then tears off for storage.

MEDIUM-DUTY

Designed for occasional access to files.

Shipping and Storage—Reusable shipping and storage box in 1. Adhesive strip seals for secure transport. Shipping lid tears off, with flip-top storage lid inside.

Stor/File™—FastFold quick, easy assembly. 2PWU6 and 2PWU7 have smooth rolled edges to deter paper cuts and add strength. 2PWU8 and 2PWU9 have reinforced plastic handle.

Stor/File™ DividerBox™—FastFold quick, easy assembly and multilayer construction with five 5" dividers.

HEAVY-DUTY

Designed for durability and frequent use.

Presto™—Instant setup; simply push corners. Double-bottom, double-end, double-side construction with tear-resistant handholes. 2PWT2 has extra reinforcement and ergonomic handholes.

R-Kive®—Multilayered corrugate construction enhances stacking strength. Reinforced handholes resist tearing. FastFold quick, easy assembly.

R-Kive® DividerBox™—Three 5" dividers keep contents upright and organized. FastFold quick, easy assembly.

Liberty®—FastFold quick, easy assembly. Reinforced plastic handle.

BinderBox™—Hold eight 1½" binders, or a variety of binders up to 3". FastFold setup, tear-resistant hand holes.

Document Displays

Organize, protect, and display reference documents. Durable, powder-coated metal brackets encase wire-reinforced PVC pockets.

Document Wall Displays—Mount to wall, expand desktop displays, or mount to accessories. Include index tabs. 1HEP2 features antimicrobial display pockets, for greater workplace health and safety.

Desktop Document Displays—Viewable at a 60° angle on a desktop, or at a 30° angle when wall-mounted. Available in portrait or B-size landscape formats. Include desk base, mounting bracket, display pockets, and index tabs.

Catalog Racks—Hold 1" or 2" sections of bulky manuals at a 45° reading angle. Heavy-gauge steel construction with powder-coated finish.

Display Accessories—For mounting wall displays to other surfaces to keep documents accessible for easy viewing. 1HEN2 telescoping desk column mounts to assembly benches or desks. 1HEN3 rack/shelf bracket mounts to shelving or pallet racks.

Duct & Repair Tape

Tapes are high-strength, durable, and have an adhesive on one side that conforms and adheres to uneven surfaces when pressure is applied.

General Purpose Duct Tape—For general, temporary repair and patching, as well as labeling, marking, and wire pulling.

Transparent Repair Tape—For discreet patching and repair work such as covering a hole in a window screen, or mending a tear in a tent.

Clean Removal Duct Tape—Tape can be left in place and exposed to outdoor elements for up to six months before removing. For use in applications where temporary but durable taping is needed, such as seasonal weather sealing.

UL-Printed Duct Tape—This tape is used in HVAC applications to seal, seam, and join ductwork and provide evidence that the work is UL-compliant.

Flame Retardant Duct Tape—For use in high-temperature applications such as sealing ductwork, insulating wiring, and environments that require flame-retardant materials.

Nuclear Grade Duct Tape—For sealing and repairing in harsh environments, it resists corrosion that could result from exposure to harsh substances found in nuclear power plants, ship yards, and steel mills. It leaves little or no residue after being applied for six months and is useful for temporary sealing, insulating, or wrapping applications.

Metalized Duct Tape—Metalized coating blends with ductwork, foil-covered sheathing and insulation.

Foil Tape

- Indoor and outdoor use

The metal backing on foil tape reflects light and heat, and it resists vapor, UV rays, and weathering. It is high strength, durable, and has an adhesive on one side that conforms and adheres to uneven surfaces when pressure is applied. Foil tape seals ductwork and foil-covered insulation in HVAC applications, and it repairs metal parts and sheeting in construction and industrial applications.

UL-Printed—Seals, seams, and joins ductwork in HVAC applications and provides evidence that the work is UL-compliant.

General Purpose—Seals ductwork and foil-covered insulation in HVAC applications, and it repairs metal parts and sheeting in construction and industrial applications.

FSK—Foil scrim kraft (FSK) tape features a combined backing of aluminum foil, kraft paper, and fiberglass scrim (lining) that provides a barrier against vapor. Tape is used for sealing and patching FSK ductwork and insulation and provides a finished look for exposed HVAC systems.

Corrosion-Resistant—Nonmagnetic tape is used in food processing plants or in harsh environments such as marine and nuclear facilities. It is useful for patching scratched coatings on surfaces where corrosion could occur if left exposed.

Anti-Vibration—Features sound-dampening qualities that reduce resonating vibration. It is used in aerospace and automotive applications where vibration could cause excessive noise and equipment fatigue.

ASJ—All surface jacket (ASJ) foil tape has a bleached white paper backing. It wraps around pipe for a clean white facing that resists extreme heat and provides a barrier against vapor. Used in HVAC applications to cover exposed pipe systems inside a building.

Reinforced—Bolstered with glass cloth, it is strong and flexible with abrasion- and heat-resistant properties. Suitable for bundling items that may be exposed to movement or vibration. It is useful in aerospace and automotive industries for protecting and insulating high-temperature equipment such as fuel lines.

General Purpose Masking Tape

497C19

23M203

- Tan color
- Rubber adhesive
- Indoor use only

This tape has a stronger adhesive than painter's tape and may leave adhesive residue when removed. It is used for temporary holding, wrapping, marking, and labeling applications.

Electroplating Masking Tape

15D106

- Lead backing
- Silver color
- Rubber adhesive
- Indoor use only
- Temp. range: -60° to 225°F

Masking tape is electrically and thermally conductive and protects surfaces in electroplating applications. This pliable tape conforms to detailed shapes for masking areas that are not intended for exposure, and removes cleanly after use.

Imperial Tape WxL	Tape Thickness	Series	Item No.

Sealing Foam Tape

15D042

- Series 4500
- Black color
- Indoor and outdoor use
- Temp. range: 0° to 250°F

These continuous rolls of tape have a vinyl foam backing that is flexible and conforms to uneven surfaces. The acrylic adhesive adheres to surfaces when pressure is applied and provides cushioning, insulates from weather, dampens sound, and absorbs vibration. It can be used in applications for weather stripping, protecting equipment, and insulating pipes to prevent condensation.

Drywalling Fiberglass 6FFA4

High-Temperature Sealing 15C122

Outdoor Line Set 10A411

Sealing Cloth & Film Tape

- Indoor and outdoor use, except No. 6FFA4 is indoor use only

These continuous rolls of tape are high-strength, durable, and have an adhesive on one side that conforms and adheres to uneven surfaces when pressure is applied.

Drywalling Fiberglass Mesh Tape—It has a light adhesive to keep the tape in place while compounds are applied. This tape is used to reinforce sealants such as paint-on mastic in ductwork and joint compounds or mud in drywall applications.

High-Temperature Sealing Glass Cloth Tape—Tape wraps and seals ducts, cables, and pipes in high-heat applications such as thermal spray masking and submerged arc welding.

Outdoor Line Set Film Tape—This tape is UV- and weather-resistant. Line sets are hoses and fittings that connect indoor HVAC equipment to outdoor equipment such as a condenser.

POLYKEN®

Residue-Free Gaffer's Tape

- Series 510
- 11.5 mil thickness
- Indoor and outdoor use
- Temp. range: 40° to 200°F

Gaffer's tape has a heavy, vinyl coated cloth-backing and does not leave an adhesive residue. The rubber adhesive adheres well to a variety of surfaces, including carpet. It is water- and heat-resistant, but less conformable than duct tape. This tape is often used to temporarily secure lighting and cables without causing surface damage. It is also used in assembly, manufacturing, construction, general maintenance and repair.

Multi-Surface
41C898

Painter's Tape

Continuous rolls of tape cover and protect surfaces from exposure to paint, while also creating clean, painted borders and reducing bleed through. Conforms to curves, irregular surfaces and removes cleanly in a single strip without splintering or leaving adhesive residue. Crepe paper backing, except 15F777 is polyethylene film and 41C895 is washi, a type of durable and flexible paper.

Multi-Surface—For use on smooth or lightly textured walls, trim, baseboards, tile, and glass.

Rough Surface—This tape has a stronger adhesive than multi-surface painter's tape and used on rougher surfaces such as brick, concrete, and stucco.

Delicate Surface—Tape has a lighter adhesive than multi-surface painter's tape. For use on faux finishes, primed wallboard, wallpaper, or one-day-old, freshly painted surfaces.

Containment Tape

- Rubber adhesive

Tape helps containment of harmful dust and particles in painting, sanding, remodeling, mold remediation, and asbestos removal.

Double-Sided—This tape has a painter's-tape-grade adhesive on one side for adhering to wood trim, painted walls, tile, and glass. The other side has a strong adhesive to hold poly sheeting and other coverings in place.

Single-Sided—It has a strong adhesive to hold poly sheeting and other coverings in place.

Double-Sided Splicing Tape

3M

- Indoor use only

Tape has a strong adhesive on both sides and a pull-away liner to assist with application. The liner can be left in place until material is ready to be attached.

Double-Sided Polyester Film—This tape is extra high-strength to withstand rigorous splicing applications without peeling or breaking. Primarily used for splicing in high-speed web printing applications.

Double-Sided Paper—Tape is hand-tearable and maintains its shape when exposed to changes in humidity or temperature. Primarily used for temporary holding of parts during the milling process or for core starting of papers, foils, films, and fabrics.

Double-Sided Polypropylene Film—This tape is high-strength and UV-resistant.

Specialty Application Tape

3M · Shurtape

- Indoor use only

Condensation Management Tape—This film tape reduces condensation formed on pipes to minimize the risk of water droplets falling and contaminating areas below. For use in applications where intermittent high humidity conditions cause condensation, such as the hot cleaning process in food processing facilities that must maintain a cool environment.

Light Blocking Tape—It is designed to block light exposure on sensitive materials such as film, graphic art, and printing materials. This film tape is primarily used in photography and lithography applications.

Riveter's Tape—This tape holds rivets in place to prevent movement during the riveting process. It is zone-coated, which means it only has adhesive on the sides of the tape and not down the center. The transparent, adhesive-free center of the tape provides visibility without leaving residue.

High-Temperature Film Masking Tape & Tape Discs

- Indoor/Outdoor use

These continuous rolls of tape resist high temperatures and conform to uneven surfaces. Thin translucent tape is colored for visibility and removes cleanly from surfaces without slivering or breaking. It is used in masking for powder coating, masking metal surfaces, and solder masking.

Polyimide Film Masking Tape—Tape is thermal, chemical, and abrasion resistant, with higher heat and abrasion resistance than polyester-backed masking tape.

Polyester Film Masking Tape—This tape is flexible with thermal and chemical resistance.

Polyester Film Masking Tape Discs—Discs cover and protect small surfaces, like a screw head, from unwanted exposure. Their uniform shape eliminates the need to trim tape to fit a surface or area.

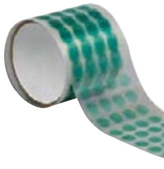
Polyimide Film Tape 15C630

Polyester Film Tape 15C567



Polyester Film Discs 15C489

Double-Sided VHB (Very High Bond) Foam Tape & Tape Shapes

- Acrylic adhesive
- Indoor and outdoor use, except 1YBZ5 and 54EN23 are indoor use only
- Pkg. qty. of 1, except 54EN23 is 9

Continuous rolls of foam tape have a high-strength, double-sided adhesive that forms a permanent, long-term bond when applied with pressure. It has a pull-away liner to assist with application and adheres well to metal, glass, and composites.

TAPE

High-Temperature Firm—They have a denser construction than conformable foam tape and perform best when applied to smooth surfaces, such as metal. Suitable for applications such as bonding for high-temperature paint processing without the use of tools and hardware.

Transparent Firm—They have a denser construction than conformable foam tape and are intended for bonding surfaces together such as glass or clear resin. This foam tape is used to attach clear dispensers or backlit transparent signs to walls without the use of tools and hardware.

Very Conformable—Made of a foam that has more conformability than other foam tape. It adheres to irregular and mismatched surfaces with a thick foam that fills gaps to provide an even adhesive base. Used in general industrial applications to mount a window on a painted control panel or bond a polycarbonate lens over an LCD.

Low-Temperature Conformable—Adheres to irregular and mismatched surfaces. The thick foam fills gaps to provide an even adhesive base. For use in low-temperature applications to attach roofing parts or bond stiffeners to panels without the use of tools and hardware.

Conformable—Tape adheres to irregular and mismatched surfaces with a thick foam that fills gaps to provide an even adhesive base. For use in general industrial applications to display signs and mount wiring ducts or electronic displays without the use of tools and hardware.

Firm—Has a denser construction than conformable foam tape and performs best when applied to smooth surfaces. It is used in general industrial applications to display signs, mount trim, or attach stiffeners to panels without the use of tools and hardware.

CONFORMABLE TAPE SHAPES

- Acrylic adhesive & backing material
- Gray color
- Indoor and outdoor
- Pkg. qty.: 5

Tape shapes eliminate the need to trim tape to cover a surface or area.

Double-Sided Film Tape

General Purpose
45K174

Repositionable
48UV66

- Acrylic adhesive

General Purpose Film—Adhesive on both sides and a pull-away liner, they are intended for one-time, permanent bonding of materials together or mounting of light-duty items such as signs, nameplates, or point-of-purchase (POP) displays.

Repositionable—Adhesive on one side and a light adhesive on the liner side, they are designed for lightweight items such as labels, paper signs, and advertisements that need to be moved or replaced frequently. The light adhesive removes cleanly when items are repositioned.

Silicone-Free Slick Surface Film
15D237

PTFE & Silicone Slick Surface Tape

- Silicon adhesive, except 2DEF1 is rubber adhesive

PTFE (polytetrafluoroethylene) tape provides a smooth anti-stick surface to reduce friction between moving parts. It withstands high temperatures for covering heated machinery and equipment. It is resistant to chemicals and provides clean-adhesive removal and cleanup of substances such as ink.

Glass Cloth Tape—This tape provides the most heat and abrasion resistance of all PTFE film tape. Reinforced glass cloth backing withstands tears, punctures, and high heat. It is used in applications such as heat sealing and ironing equipment, and on high-contact parts such as conveyor rollers and belts.

Film Tape—Film tape provides higher chemical resistance than glass cloth, and removes cleanly after applied.

Silicone-Free Film Tape—Used for composite bonding and painting applications where non-silicone tape is preferred.

Preservation Sealing Tape

- Tape thickness: 9.5 mil
- Polyethylene film backing
- Rubber adhesive
- Indoor and outdoor use

Continuous rolls of tape are often used to seal heavy sheeting or tarp to protect and preserve material and equipment for transportation and storage in marine, military, and industrial applications.

UHMW Slick Surface Film Tape

- 5-yd. length

UHMW (ultra-high molecular weight) slick surface film tape is used to limit squeaking, rattling, and vibrations produced in applications with heavy moving parts or materials. This tape has a liner for die-cutting uniform shapes to fit specific applications and is used in aerospace, automotive, printing, and general maintenance and repair industries.

PE Slick Surface—The polyethylene (PE) backing is resistant to abrasions and chemicals. It provides clean adhesive removal and cleanup when using substances such as ink. It is used on conveyor guard rails, chutes, plates, and belts.

PO Slick Surface—The polyolefin (PO) backing is resistant to abrasions. It is used on conveyor guide rails and chutes that require a more durable surface, such as glass bottling processing. This tape can also be used on drawers to create friction-free movement.

Surface Protection Film Tape

- Indoor and outdoor

These continuous rolls of translucent film tape temporarily protect surfaces. This tape has a mild adhesive and removes cleanly after use.

General Purpose—Protects glass, wood, metal, and plastic surfaces from scuffs, scrapes, and paint exposure.

UV-Resistant—Protects glass, metal, and painted surfaces that are exposed to sunlight.

Abrasion-Resistant—For applications that need a stronger tape to withstand punctures, tearing and erosion. It has a polyester liner to assist in applying the tape to surfaces for temporary protection.

Double-Sided Foam Tape & Tape Shapes

These continuous rolls of strong foam tape have a double-sided adhesive with a pull-away liner.

TAPE

- Tape rolls sold in qty. of 1, except 54EN24 is 9

Firm—This tape has a denser construction than conformable foam tape and performs best when applied to smooth surfaces. It is used for mounting heavier items where a stronger bond is needed.

Transparent Firm—Used for bonding transparent surfaces together such as glass or clear resin.

Conformable—The thick foam fills gaps in irregular or mismatched surfaces, such as tile or brick, to provide an even adhesive base for mounting items. Used to mount signs, nameplates, and dispensers.

Removable Firm—This tape has a denser construction than conformable foam tape and performs best when applied to smooth surfaces. It is used for mounting heavier items where a stronger bond is needed.

TAPE SHAPES

- Acrylic adhesive, except 5T160 is rubber

Precut shapes eliminate the need to trim tape to cover a surface or area.

Adhesive Transfer Tape

These continuous rolls consist of a very thin adhesive layer. The adhesive is applied to a surface and the pull-away liner is removed. The liner protects the adhesive side of a single- or double-sided tape until it's ready to be applied.

Reverse-Wound—This tape is wound onto a roll with the adhesive side out. It is designed to be loaded into an adhesive transfer gun (ATG) dispenser (sold on this page) where the adhesive is applied while the liner is pulled away. It is used for light-duty mounting in repetitive print and framing processes where a uniform application of adhesive is needed.

General Purpose—Tape does not have a carrier like double-sided tape. Adhesive is applied to a surface and the pull-away liner is removed. For use on a variety of surfaces including metal, glass, wood, and paper. It is primarily used for light-duty mounting of signs, posters, picture frame mat boards, and dust covers.

Reverse-Wound 45AW55

Adhesive Transfer Tape Dispensers

- 1" compatible core dia.

Adhesive transfer gun (ATG) dispensers are designed for reverse-wound adhesive transfer tape (sold on this page), which is tape wound with the adhesive side out. The dispenser applies the adhesive while at the same time peeling up the liner and threading it back into the dispenser. For use in light-duty mounting in repetitive print and framing processes where a uniform application of adhesive is needed.

Adhesive Transfer Tape Squares

Poly Coated Kraft Paper 15C892

- Indoor and outdoor use

These precut shapes consist of a very thin transparent adhesive layer. The adhesive is applied to a surface and the pull-away liner is removed. Tape performs well on a variety of surfaces including metal, glass, wood, and paper. For use on light-duty mounting of signs, posters, picture frame mat boards, and dust covers.

VHB (Very High Bond) Adhesive Transfer Tape & Shapes

TAPE

- Acrylic adhesive
- Poly coated kraft paper liner
- Indoor and outdoor use

These continuous rolls of adhesive transfer tape have a high-strength transparent adhesive that forms a permanent, long-term bond when applied with pressure. It is UV- and chemical-resistant. It consists of a very thin adhesive layer only, and does not have a carrier like double-sided tape.

The adhesive is applied to a surface and the pull-away liner is removed, exposing the adhesive for immediate bonding. This adhesive transfer tape can replace metal fasteners and liquid adhesive for mounting frames, metal trim, and stiffeners to panels.

TAPE SQUARES, STRIPS & DISCS

- 2 mil thickness

Tape shapes eliminate the need to trim tape to cover a surface or area.

Reclosable Fasteners

3M Dual Lock Interlocking mushroom-shaped stems snap together to provide tensile strength strong enough to replace mechanical fasteners. Acrylic adhesive backing is suitable for outdoor use. Bond to glass, bare metal, sealed wood, vinyl, and polystyrene. Low-profile models are thinner and more flexible.

Standard Rubber Packaging Tapes

Tape is shorter than machine length rubber packaging tape and is used in conjunction with a hand tape dispenser.

Polypropylene-Backed Tapes—Material is smooth, flexible, and tear-resistant. It is commonly used for boxes that are made of recycled material, have been previously used, or have rough surfaces.

PVC Natural Rubber-Backed Tapes—Material is strong, flexible, and resistant to heat, chemicals, and abrasion. This tape is quiet when pulled off the roll.

Standard Acrylic Packaging Tapes

Tape sticks to many surfaces and can withstand harsh environments such as high humidity and temperature extremes. Tapes fit into a hand or counter dispenser.

Clear Acrylic—Adhesive and backing will not yellow, and is commonly used for sealing white and other colored boxes, tubes, and mailers.

Colored Acrylic—Can be used for color coding on boxes, mailers, and tubes. It is commonly used to identify inventory dates, product codes, and warehouse locations.

Tan Acrylic—Tape blends in with Kraft-colored boxes, mailers, and tubes.

Standard Hot Melt Packaging Tapes

Tape instantly sticks to boxes, mailers, and tubes for an immediate seal. It resists tearing, splitting, and ripping and releases quicker off the roll than acrylic tape. Material withstands high temperatures and has outstanding holding power and tensile strength. For use by hand or with a dispenser.

Clear Standard Hot Melt Tapes—Clear tape will not yellow. It is commonly used for sealing white and other colored boxes, tubes, and mailers.

Colored Standard Hot Melt Tapes—It is commonly used to identify inventory dates, product codes, and warehouse locations.

Tan Standard Hot Melt Tapes—Tape blends in with Kraft-colored boxes, mailers, and tubes.

Machine Length Clear Acrylic Packaging Tapes

Tape is longer than standard acrylic packaging tape. It is for use with machines in high-volume applications only, and will not fit on a hand or counter dispenser. The tape is fed through a machine, usually on a conveyor line, that applies the length of tape needed for the package. It will not yellow.

Standard Packaging Benchtop Tape Machines

Tape Machine
11J978

Carousel Dispenser
20XE12

- For 3" dia. core

Benchtop tape machines, also known as box sealers, apply tape to the top and bottom of cardboard cases. They are compact for use on a tabletop and do not utilize a conveyor. The tape size needed is preselected by the user. These machines are most commonly used for sealing regular slotted containers (RSC).

Strapping Tapes

Strapping tape is fiberglass-reinforced and has high tensile strength and good tear resistance. It is moisture- and solvent-resistant and will not delaminate, split, or crack. It's commonly used on pallets and features a polypropylene tape backing material.

Light-Duty—Used for light-duty applications such as strapping tubes together.

Standard-Duty—An economical alternative to plastic or metal strapping for strapping heavy boxes together.

Heavy-Duty—Strongest option for palletizing, bundling, and sealing cartons for heavy items such as metal pipes.

Water-Activated Kraft Tapes

Kraft

White

Water-activated Kraft tape, also known as reinforced tape, is run through a tape machine that applies water, activating the glue on the tape. It is made of reinforced fiberglass strings that are difficult to tear apart. A box cutter or utility knife is required to cut the tape.

Packaging Tables

- Min. tabletop height: 30"
- Max. tabletop height: 36"

Packaging tables are used by employees in warehouses as a workspace for wrapping and taping boxes, mailers, and tubes for shipment.

Laminate-Top—Tables resist scratches and stains. Laminate is lightweight, nonconductive, and can be cleaned easily in the event of a spill.

Particle Board-Top—Used for light- and medium-weight packaging applications. They resist denting and distortion and are easy to clean.

Solid Maple-Top—These tops are more durable than particle board tops and are used for high-volume medium- and heavy-weight applications.

Cardboard Storage Stand—Optional stand keeps boxes clean and off the floor. Compatible with PRO-LINE benches.

Foot-Operated Bottom Carton Staplers

Foot-operated bottom carton staplers have a built-in stand. A box is placed into the stand and the foot-operated stapler seals the bottom of the box. These staplers are commonly used in high-volume packaging applications.

Manual Foot-Operated—Staplers operate when pressure is applied using a foot pedal to activate the stapler arm, sealing the carton with each step.

Pneumatic Foot-Operated—Staplers operate when pressure is applied using a foot petal, engaging an air hose, applying air pressure to seal the staple.

UPS Guidelines	Fiber Box Handbook	Box Type
30-lb.	65-lb.	32 ECT Single Wall
40-lb.	65-lb.	200# Single Wall
50-lb.	95-lb.	44 ECT Single Wall
60-lb.	100-lb.	48 ECT Double Wall
80-lb.	120-lb.	51 ECT Double Wall
—	160-lb.	71 ECT Double Wall
—	280-lb.	90 ECT Triple Wall

What strength do you need?

Using the chart (at left), find the weight of your shipment to see the box strength that you'll need to support it. You may need to follow a particular set of guidelines depending on your carrier. Both the UPS and Fiber Box Handbook recommendations are represented in the chart.

There are two tests of box strength to consider:

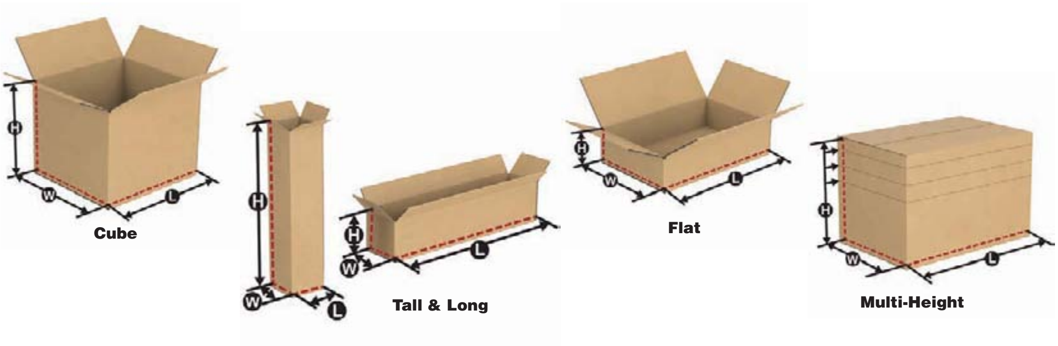
ECT (Edge Crush Test) measures the stacking strength of the box. The greater the number, the greater the amount of force required to crush the box during stacking.

200# is a rating given to boxes that have received The Mullen Test for bursting strength. These boxes provide greater overall stacking strength than ECT boxes.

Single Wall, also known as double face boxes, have walls constructed of a corrugated medium glued between two sheets of linerboard.

Double Wall boxes can be used to ship rough-edged items. The walls are constructed of two corrugated mediums glued between three sheets of linerboard.

Triple Wall boxes can be used to ship heavy, sharp-edged metal parts. They have walls constructed of three corrugated mediums glued between four sheets of linerboard.



Standard Shipping Boxes

Boxes are made of corrugated cardboard for storing and shipping products. For additional box sizes, see Grainger.com.

Multi-Height Boxes— Create multiple heights out of one box.

Insulated Box Liners

- Min. temp.: -60°F
- Max. temp.: 180°F

Made of flexible air bubble packaging with a layer of shiny, reflective film. They fold into a shape that lines boxes and close at the top and seal the contents. Used for shipping perishable products, and keep excess heat or cold out of the package, preserving the contents and preventing spoilage of food or medication. FDA compliant materials.

Gaylord Container

Bulk Cargo Container

Lids for Gaylord & Bulk Cargo Containers

Gaylords and Bulk Containers and Lids

Half Slotted Container (HSC) closure style boxes have bottom flaps that meet at the center of the box; however, there is no cover or flap on top. These boxes are for applications where boxes require frequent loading and unloading. Typically, a lid is required to close the box. Regular Slotted Container (RSC) have top flaps that meet at the center of the box when folded and are usually closed using tape or staples.

Gaylord Containers—These large boxes have outside measurements of 48"L x 40"W and varying heights that fit on a pallet. They hold and organize bulk loads and transfer large shipments between locations. They are commonly used to collect recycling, trash, or debris at a facility.

Bulk Cargo Containers—Are measured with outside dimensions for matching to pallet sizes. These large boxes consolidate and transfer large shipments that need to stay together from one location to another. They are commonly used for master packing bulk loads of similar products or to collect garbage or recyclable materials in a facility.

Lids for Gaylord and Bulk Cargo Containers—Cover and close bulk cargo and gaylord containers while protecting the contents from dirt and dust during transport or storage. They allow bulk cargo and gaylord containers to be stacked within warehouses or storage facilities. They can be reused as covers or flipped upside down and used as a tray to store and organize items in a warehouse or facility.

Reinforced Literature Mailers

52RT03

- White color

Triple-layer sidewalls and double-layer front panels prevent the package from tearing or bursting during transit. They are stronger than standard literature mailers and ideal for shipping fragile items wrapped in protective packaging material.

Printed Moving Boxes and Kit

Printed Moving Boxes—Large enough to hold household items and small enough to be handled by movers and stacked in a truck or container for transport. They are preprinted with labels that allow movers to write in identifying information.

Kit—Includes a combination of products for packing and moving household items. Boxes have labeled areas for writing in contents or other identifying information. Protective packaging material wraps fragile items to protect them from damage during transport such as cracks or chips. Tape seals a packed box, and markers label boxes with contents. Moving kit includes:

1PKA2

(5) boxes: 16" x 12-½" x 12-½"; (4) boxes: 18" x 18" x 16"; (2) boxes: 24" x 18" x 18"; (1) tall box: 26" x 6" x 36-½"

(2) rolls of tape: 2" x 55 yds.; (2) rolls of bubble wrap: 16" x 9"; and (1) black marker.

Corrugated Pads

Standard-Duty pads are sheets of cardboard for layering between items on a pallet. They separate products in a stack, protecting them from damage or slippage and can protect the floor from pallet base damage.

Heavy-Duty double-walled cardboard sheets are for layering between heavy products, such as paint cans, bricks, or appliances.

Paint Can Shipping Kits

- Berlin brand items are UN Rated
- Polar Tech brand items are UN/USA D.O.T. Approved containers

These preassembled boxes are for shipping containers of paint, primers, or floor coatings. They are labeled with codes that identify the contents, and they are printed with arrows that help handlers keep the boxes in an upright position during transit.

Cold Packs

- Reusable

Gel—These packs are flexible when not frozen and contain refrigerant gel that stays colder longer than ice. They help maintain a consistent temperature inside boxes or pallets of perishable products. Moisture safe packs have a nonwoven poly cloth that absorbs moisture.

Freezer—Rigid cold packs resist damage from punctures and can last for years. They contain a nontoxic gel that helps maintain a consistent temperature in coolers and ice chests to prevent perishable products from spoiling.

Cold Packs—These leakproof packs of refrigerant gel stay colder longer than ice. They help maintain a consistent temperature inside boxes or pallets of perishable products.

Insulated Foam Shipping Container 12F276

Insulated Box & Foam Shipping Kit 12F337

PolarTech Industries

Insulated Shipping Kits

Box and Foam Kits—Preassembled kits include a shipping box with a lidded foam insert for packaging and shipping food, beverage, and pharmaceutical products. The foam container holds the product and fits securely into the box. These kits help keep the package temperature constant and prevent damage to the products from excessive heat or cold.

Foam Containers—Lightweight boxes made of expanded polystyrene have a tight-fitting lid that closes the box opening with an insulated seal. These reusable containers resist leaks and keep food and medical supplies cold during transport.

SONOCO THERMOSAFE

Insulated Plastic Shipping Containers

Reusable boxes or totes secure food products for transport. These hard plastic containers help maintain a constant temperature inside the package and protect the contents against damage from excessive heat or cold. They are more durable and maintain temperature longer than corrugated boxes and foam containers.

Insulated Mailers

- ³⁄₁₆" bubble

These envelopes with a self-sealing closure hold small product samples or individual pill containers. They are made of air bubble packaging material with a layer of shiny, reflective film that keeps excess heat and cold out of the package. They maintain a consistent temperature for the contents, preventing spoilage of food products or damage to medications. FDA compliant materials.

Poly Bubble Mailers

White

- 3/16" bubble

White mailers resist tearing, cushioning and padding items and protecting them from moisture and water. A self-sealing closure secures the contents for shipment. Commonly used for shipping small parts, sample products, and small gift items that aren't fragile.

Paper Bubble Mailers

Kraft

- 3/16" bubble

Mailers cost less than poly bubble mailers and are constructed of a kraft color paper envelope with a bubble liner. The self-sealing closure secures the contents in the envelope for shipment, and the liner provides cushioning to protect the item from damage. Commonly used for shipping small parts, sample products, and small gift items that aren't fragile.

Tear-Resistant Poly Mailers

White

Tear-resistant poly mailers are flexible envelopes that cannot be easily torn open. They are water-resistant and protect the contents against moisture. These envelopes seal closed. They do not have a padded liner and are ideal for mailing clothing and other items that are not fragile.

Stayflat Tab-Locking Chipboard Mailers

Tab-locking chipboard mailers have a tabbed flap that folds over the opening. The tabs lock into slots to close the mailer. The tabs allow the mailer to be opened and reclosed, making the mailer reusable. Stiff paper prevents contents from folding or bending during shipment and are ideal for shipping flat items such as photos.

Sealed Air®

Jiffy Rigi Self-Sealing Fiberboard Mailers

Kraft color chipboard flat mailers are made of stiff, thick paper, and they prevent the envelope contents from folding or bending during transit. Feature a self-seal flap. Insert contents and fold over to seal. To open, tear strip. They are ideal for shipping flat items that must not bend, such as photos.

Stencil Rollers

These rollers are used to apply roll-on inks to shipping stencils and transfer a message from the stencil to a shipping container or product.

Stencil Rollers—Shipping stencil rollers come with replaceable handle and head.

Stencil Brush—A valve dispenses compatible Rolmark and K-1 ink into hog hair brush bristles. The protective cover prevents drying when not in use.

Foam Roller with Handle—Economical stenciling system uses Rolmark ink on porous and nonporous surfaces for occasional stenciling.

Replacement Fountain Brush Tip—Replacement tip with hog hair bristles is for stencil fountain brush 5A134.

Stencil Ink

Shipping stencil inks are applied to shipping stencils to transfer the message from the stencil to a shipping container or product.

Spray Cans—Aerosol cans are used to spray ink onto a shipping stencil. This is a faster way to apply ink than rolling it on.

Roller Inks—Water-resistant ink is rolled onto a shipping stencil with a compatible ink roller.

Roller Ink Cartridges—These cartridges screw into express roller 4HY28 sold on this page.

Stencil Cutting Machines and Oil Boards

4W224 w/Oil Board
(Sold Separately)

Stencil Cutting Machines—Punch out letters and numbers on oil boards to create custom stencils for marking shipping containers with messages, warnings, and handling instructions. Compatible with individual shipping stencil oil boards. Not compatible with shipping stencil oil board rolls.

Stencil Oil Boards—Individual rectangular sheets of material are used with cutting machines to create custom stencils. After the machine punches the message into the board, ink is applied to paint the message onto a container or product. Boards are made from materials that resist ink bleedthrough, which helps ensure crisp, readable messages. They can be used on flat or curved surfaces.

General-Purpose Pre-Printed Packing List Envelopes

A message on the front of the envelope identifies the contents within. Adhesive-backed plastic pouches are stuck to the outside of a package to hold shipping documents.They ensure invoices, packing lists, and safety data sheets are visible and reduce the risk of them getting damaged, lost, or thrown out. Use on boxes, cartons, mailers, tubes, and large envelopes.

Thermal Transfer Labels

Blank paper labels require a ribbon to produce crisp images that will last longer than direct thermal label images. An adhesive backing allows the labels to stick to shipping containers. A thermal barcode label printer is used to customize the labels with print addresses, barcodes, and company logos. **Thermal transfer label rolls** save time because they contain more labels than a fanfold. **Fanfold labels** consist of multiple labels that are folded into a stack. **Colored labels** can be used for color-coding shipments, shipping locations, and products.

Thermal Transfer Ribbons

Use with thermal barcode label printers to print information on thermal transfer labels. The ribbons contain ink that is absorbed into the label material to form a crisp image during printing. **Wax ribbons** create smudge-resistant images. They are suitable for labels that will be used in indoor environments. **Wax/Resin** and **Resin ribbons** resist smudges and scratches and can be used in indoor and outdoor environments. Wax/Resin ribbons may be exposed to light or moderate abrasion. Resin ribbons may be exposed to heat, heavy abrasion, greases, oils, and harsh chemicals.

Barcode Label Printers

Label printers use heat to print barcodes and other useful information on direct transfer or thermal transfer labels. They let users create custom labels with barcodes, addresses, company logos, and other information for shipping, tracking, inventory, product identification, and barcode pricing applications.

DESKTOP BARCODE LABEL PRINTERS

ZD420 Series—Uses both standard ribbon and cartridge. It alerts the user when a ribbon needs replacing. **ZD620 Series—**Features a three-button interface with five LED status icons or an optional 10-button interface with color LCD display.

INDUSTRIAL BARCODE LABEL PRINTERS

ZT411 Series—Printer performs both thermal transfer and direct thermal printing. It has a side-loading metal print mechanism and toolless printhead replacement. Metal media cover has enlarged clear viewing window. A bi-fold media door decreases overall operating space. **ZT510 Series—**Features a customizable, back-lit multiline graphic LCD display with intuitive menu and keypad for quick operation. It is capable of thermal transfer and direct thermal printing.

MOBILE BARCODE PRINTERS

ZQ320 Series—3" printer for labels, receipts or both. It has scuff-resistant, durable housing that can withstand outdoor elements. Printer uptime is improved with monitoring and troubleshooting capability in real-time from a remote central location. **ZQ510 Series—**Used for 3" receipt printing and has military-grade durability to withstand significant drops to concrete, sprayed liquids, and dirt. It has large buttons and a user-friendly interface for easy operation, even when wearing gloves. **ZQ630 Series—**Features radio-frequency identification (RFID) technology and large color graphics display. Wake-up feature allows the printer to enter sleep mode when idle and wake up when the user presses the print button. Roaming technology ensures that there is always a dependable internet connection.

Damage Indicators

DROP N TELL® SHOCKWATCH® TILTWATCH® XTR

Shock indicators provide clear visual indication if a shipment has been dropped or otherwise exposed to an impact force that exceeds a predetermined level.

Drop N Tell Indicators are self-stick damage indicators that attach to shipping containers. They come with warning labels that are also applied to the shipping container to give clear instructions for receiving the shipment if mishandling has occurred during transportation.

ShockDot Indicators are always activated and include a QR code for traceability.

ShockWatch Indicators can be used with compatible companion labels that are also applied to the shipping container to give clear instructions for receiving the shipment if mishandling has occurred during transportation.

ShockWatch 2 Indicators are field-armable to eliminate activation until impact detection is needed.

ShockWatch Indicator Companion labels are used on shipments that contain ShockWatch brand shock indicators. The labels instruct people how to handle the shipment and receive it if damage is indicated on the ShockWatch indicator. The companion label is placed on the shipping container and then the ShockWatch label is placed over the companion label, as indicated by the illustration on the companion label.

Barcode Label Scanners

Scanners read barcodes on labels, and capture address and tracking information on items, process inbound and outbound shipments, price products, and manage inventory. They are used in warehouses, retail stores, e-commerce businesses, shipping and receiving departments, product picking tasks, and healthcare facilities. **Corded Barcode Label Scanners—**Plug into USB outlets. Commonly used at counters at retail stores. **Cordless Barcode Label Scanners—**Portable scanners are powered by batteries. They are suitable for applications where the scanner needs to be used in many different locations. **Industrial Cordless Barcode Label Scanners—**These portable scanners are more rugged than standard cordless barcode scanners. They can withstand more impact from being dropped or knocked around during use and are suitable for freezer applications. They are powered by batteries.

Direct Thermal Labels

Create custom labels with barcodes and other useful information. These blank paper labels do not require a ribbon, ink, or toner for printing. Adhesive backing sticks to surfaces such as packages, shipping containers, and warehouse or retail racks. A compatible thermal barcode label printer is used to print addresses, barcodes, company logos, etc., see page 1379. **Direct Thermal Rolls—**Multiple labels are stored on a roll core. **Colored Direct Thermal Label Rolls—**These labels can be used for color-coding shipments, shipping locations, and products in a container.

Heat Poly Bag Sealers

Seal parts in plastic bags for shipping, distribution, or storage. Bag sealers use pressure and heat to close poly bags with a watertight, airtight seal. They crimp the top of a bag and apply heat that melts a strip of the bag to close it. **Foot Operated—**These sealers help with floor sealing jobs. **Tabletop Impulse Sealers—**Spot crimp sealing for flat and gusseted poly bags or poly tubing. **Repair Kits—**Include heating element, lower PTFE tape, and upper PTFE fabric.

Gusseted, Open-End Poly Bags

- FDA compliant

Clear bags have a wide bottom that lays flat on surfaces and creased sides that expand to form to the shape of bulky items. Sold in case packs. For heat impulse sealers, see page 1409.

Poly Tubing and Dispensers

- Clear tubing
- 3" core dia.
- FDA compliant

Standard Poly Tubing—Cut to length for a customizable storage solution. It can be closed with a heat seal, staple, tie, or tape and keeps contents organized and protects them from dirt, dust, and moisture during shipping and storage.

Cleanroom Poly Tubing—Manufactured in a Class 100 cleanroom, where environmental control of particulate and microbial contamination is maintained. Use of Class 100 tubing is required in aseptic manufacturing/packaging environments.

Poly Tubing Dispensers—Mount on a counter, bench, or wall and provide access to poly tubing. The width of the dispenser will determine the roll size that it will house.

Poly Tubing Dispenser 8AYX4

Reclosable Poly Bags

MINIGRIP
A Member of Inteplast Group

- LDPE material, except polypropylene where noted in footnote
- FDA compliant

Reclosable clear poly bags and drawstring bags have a closing mechanism that can be opened and closed multiple times. They eliminate the need for a heat sealer or twist ties, and are commonly used to store mail, food, or small, static-sensitive parts.

Single Zip Seal—Bags are reinforced to help prevent splitting when bags are opened or filled. These bags can be opened and closed quickly.

White Block Write on Surface—Bags have a section on the middle of the bag for writing a custom message, such as an address, using a marker or pen.

Double Zip Seal—Bags provide a secure lock that keeps out moisture and air. The heavy-duty zipper helps prevent leaks and eliminates spills and contamination. These bags have a wide opening for easy sealing and resealing.

Slide Seal—Bags have a seal mechanism that glides smoothly across the bag to help eliminate spills or contamination.

Drawstring Reclosable—Bags have a drawstring closure to seal the bag securely. The drawstring can be used to hang a sealed bag containing additional parts or instructions where needed.

Single-Drawstring

Single-Drawstring Bag with Tag

Midwest Pacific®

Drawstring Bags

- Cotton/Poly blend
- 3.98 oz/sq yd fabric weight
- Pkg of 100

Bags have a pull string closure that is used to keep the bag closed. These tear-resistant bags are used to transport and store small parts and hardware such as bolts, screws, and hex keys.

Single-Drawstring Bags— Bags can also be used to hang the bag from equipment or door handles.

Single-Drawstring Bags with Tag—Bags include a tag for printing customizable information such as addresses.

Double-Drawstring Bags— Bags have two drawstrings that can be tied into a tight knot to help keep items from falling out.

Moving Blankets and Covers

Moving blankets and covers can be wrapped around appliances, door jambs, and furniture to protect against dents, scratches, and other damage while items are in transit.

Cotton/Poly Quilted Moving Blankets— Zigzag stitching helps keep the blankets from unraveling. They have one-piece linear batting and finished corners to cushion items and protect from dust and dirt.

Non-Woven Quilted Moving Blankets— Zigzag pattern, stitched padding provides cushioning for the items being moved.

Cotton/Poly Quilted Furniture Covers— Zigzag stitching helps keep the covers from unraveling. Hook-and-loop fasteners help hold the covers in place.

Cotton/Poly Quilted Appliance Covers— Covers are slipped over appliances to help absorb shock. Zigzag stitching helps keep the blankets from unraveling. They have one-piece linear batting and finished corners to cushion items and protect from dust and dirt. These covers have ties to help prevent them from sliding.

Cotton/Poly Quilted Hand Truck Cover— Slip over hand trucks to help absorb shock while items are being moved.

Cotton/Poly Quilted Doorjamb Cover— Protect doors and furniture when items are being moved through a doorway. The double-insulated padding has three heavy-duty springs that are used to hold the cover on the door frame. These covers can also be used on stairway banisters.

Forearm Lifting Straps and Moving Harness—Encourage proper lifting techniques by using leverage so that items being moved seem lighter. Also won't leave scrapes and scratches on floors like dollies or hand trucks.

Packing Peanuts

- S-shaped peanut

Reusable, loose packing peanuts fill excess space in a container around a product and provide some protection against damage during transit for items that are not fragile.

Recycled Polystyrene Peanuts—Dissolve in water. Reusable.

Biodegradable Peanuts—For packages that will not be exposed to moisture. 100% recycled fill is reusable and static-free. Will not chip or dust.

Anti-Static Peanuts—Are made of material that does not accumulate static electricity, so they are a good choice for filling space in containers around electronics or computers. They reduce the risk of electrostatic discharge, which can damage fragile electronic components.

Virgin Polystyrene—Peanuts are reusable loose packing material.

Instant Foam Packaging

The foam relies on pressure to form into the shape of items in a container. It doesn't need to be warmed and works faster than foam that requires heat. It is supplied in a bag containing two compounds. When mixed with pressure, the compounds harden into foam that surrounds the item in the box and fills all void space.

BubbleWrap

Bubble Rolls for General Use

- Clear

Flexible plastic material made with regularly spaced air pockets is used to wrap and cushion items inside a package.

Standard—Ideal for e-commerce companies that pack and ship lightweight or midweight items without sharp corners.

Parcel-Ready—Because they're smaller than standard rolls, they are a good choice for small e-commerce businesses that ship low volumes of items and have limited space to store shipping supplies. Meet standard UPS shipping guidelines.

Heavy-Duty—Stronger than standard bubble packaging. The air pockets are made from more layers of plastic, making them ideal for packing heavy or sharp objects edges during transit.

Insulated Bubble Rolls

- 3⁄16" bubble
- Min. temp.: -60°F
- Max. temp.: 180°F

Bubble rolls are layered flexible plastic material with regularly spaced, uniform air pockets that has a layer of shiny, reflective film on one side. It can be cut or torn to length to line a container to protect foods, beverages, and pharmaceutical products during transit. The packing material helps maintain a consistent temperature in the container, preventing heat or cold from entering and spoiling food or damaging medications. Silver color.

Kraft Paper Crumpling Machines and Paper

These products tightly pack paper to fill voids in packages keeping items from moving during shipping and shielding them from damage. Machines are only compatible with paper of the same brand.

Kraft Paper Crumpling Machines—Pregis-Quantum is designed for high volume operations but is small enough to support decentralised pack stations. **Sealed Air-Fasfil** delivers paper on-demand for small and low-fragility voids.

Kraft Paper Bundles—Brown paper can be dispensed from a stand so that the required amount can be torn off. It can be used to wrap or layer between items, or to fill excess space inside packages.

Air Pillow Films

Air pillow films are rolls of a double layer of thin plastic film. Film is inflated and sealed in sections with an air pillow machine of the same brand as the film to form a packing "pillow." Perforations between each pillow allow them to be separated into singles or lengths of pillows as needed to fill void space in a package prior to shipment. The air pillows provide some cushioning for packaged items, preventing them from shifting in transit.

Air Pillow Machines

Air pillow machines hold a roll of air pillow film of the same brand as the machine. They have a mechanism to pull film from the roll and swiftly inflate and seal each pillow. The machines can be mounted on a wall or table in a packaging station, or they can be fitted to a stand with casters so they can be moved around a facility. Air pillow machines are a good choice for packaging stations with limited space because the machine and film rolls take up less space than other types of protective packaging, such as peanuts or packing paper.

Desiccant Bag

Cartridge

Desiccant Bags

Bags are packets filled with material that absorbs moisture. When added to packages, these packets absorb water vapor and protect items that must not get wet. They protect leather items, food products, or medicines.

Tyvek—These tear-proof, dust-free bags meet FDA specifications for contact with food and drugs. They are used to absorb moisture when shipping food, pharmaceuticals, and electronic components.

Cartridge—FDA-approved cartridge is for use in food and pharmaceutical applications. The silica gel is packed in a hard cartridge to save space when used in pharmaceutical bottles. Cartridge is best suited for use at temperatures below 100°F, but can be used at up to 302°F.

Standard Foam Rolls

Foam sheeting is ideal for packing large volumes of fragile or breakable items. Rolls fit on a dispenser stand so foam can be pulled from the roll and cut to size or torn at perforations. White color packaging foam is thin, flexible and protects glass, ceramics, metal parts, or wood products from scratching or breaking during shipment.

Humidity Indicator Cards

Moisture-sensitive spots measure the percentage of relative humidity inside a shipment. The card hangs on the inside of a container wall. If the humidity level exceeds a certain percentage, the moisture sensing spot on the card changes color from blue to pink, alerting shippers to check the package for moisture or damage.

Dunnage Bags

Bags are inflated with air and placed between items in a shipping container or truck. They prevent large items from shifting during transit, protecting against damage to the shipment.

Kraft Paper Dunnage Bags—Are recyclable and reusable if not punctured. They provide a firm cushion around large items and protect products against damage.

Industrial Poly-Woven Dunnage Bags—Made of polypropylene and resist damage from punctures and chemicals. They are waterproof and ideal for stabilizing heavy loads in open railcar shipments.

Vinyl Dunnage Bags—Bags are flexible and reusable if not punctured. They are ideal for bracing perishables, beverages, and odd shaped loads.

Corrosion Inhibiting VCI Paper Rolls

Heavy packaging paper can be cut or torn to size. Rolls fit in a dispenser for use at a packing station. The paper wraps metal parts for shipment and storage, and it prevents rust from building up on items.

Corrosion Inhibiting VCI Stretch Wrap

VCI (volatile corrosion inhibiting) film is wrapped around a bundle or pallet to protect machinery and ferrous parts where corrosion of metal parts is a concern. **Hand-grade wrap** can be applied with or without a handheld dispenser. The worker applies the wrap by holding the roll and walking around the bundle. These rolls are smaller than machine-grade wrap rolls, making them easier to transport around a facility. It is used in low- to moderate-volume wrapping applications. **Machine-grade wrap** is installed on a stretch wrap machine. It comes on larger, heavier rolls than hand-grade wrap. Opaque stretch wrap cannot be seen through, which provides added security by hiding product labels when shipping sensitive or valuable items.

Corrosion Inhibiting VCI Pads

Foam pads are infused with a volatile corrosion inhibitor for preventing rust. They can be placed in or between fragile metal items or electronic components to cushion them during transit or storage. VCI pads prevent moisture from accumulating on fragile metal parts that would cause water damage or rust.

W	L	Area Protected	Pads per Case	Thickness	Item No.	Pkg. Qty.

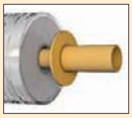
Stretch Wrap Style and Handle Types

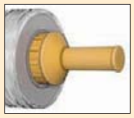
Cast Stretch Wrap
High-clarity wrap tears quietly off the roll and is ideal for uniform loads.

Blown Stretch Wrap
Puncture-resistant wrap is ideal for irregular loads.



Handle w/Brake

Longer Core



Reusable Handle

15G118

Hand-Grade Stretch Wrap

Protect pallets and bundles from contaminants such as dirt and moisture, keep items together, and prevent tampering. This wrap is for use with or without a hand-held dispenser. Apply the wrap by holding the roll and walking around the bundle. These rolls are smaller than machine-grade wrap rolls. Use to wrap boxes and irregular loads or bundles, such as lumber or pallets with irregular sides.

Cast Stretch Wrap Films—This wrap is quieter to apply, and has more cling than blown film. It also provides improved clarity over blown film for viewing bundle contents and requires less force to stretch the wrap during application for uniform loads.

Blown Stretch Wrap Films—Puncture- and tear-resistant wrap is a good choice for irregular loads with sharp edges. It is less likely than cast film to change shape or stretch after application, which makes it good for heavy loads or loads that might shift during transport.

GOODWRAPPERS HANDWRAPPERS

Color-Coding Stretch Wrap with Handles

Color-coding is used to quickly identify contents to sort and route items, and can be used to indicate tampering or repalletizing. This hand-grade stretch wrap has a handle that workers hold while applying wrap, protecting hands from cuts and scrapes caused by sharp cores and reducing hand fatigue. **Handle with brake stretch wrap** features a brake between the roll and the user's hand. **Reusable handle stretch wrap** can be removed from the roll when it's empty and reused. Ergonomic grip helps reduce worker fatigue.

Stretch Wrap with Handles

Handles are included to protect hands from the sharp edges of the core and reduce cuts and abrasions. To apply the wrap, the worker holds the handle and walks around the bundle. Smaller than machine-grade wrap for easy portability.

Longer Core Handle Stretch Wrap Films—Built-in handle extends from each end of the core, allowing workers to hold the core while wrapping. Handles are disposable.

Reusable Handle Stretch Wrap Films—Handles can be removed when the roll is empty and installed on refill rolls. An ergonomic grip allows wrap to be applied with one hand and helps reduce hand fatigue.

Handle with Brake Stretch Wrap Films—Hand-grade stretch wrap has a reusable handle with a brake between the handle and core to protect workers' hands from sharp edges.

Blown Wrap

Blown Wrap, Anti-Static

Machine-Grade Stretch Wrap

This wrap is installed on a stretch wrap machine. It comes on larger, heavier rolls than hand-grade wrap. Stretch wrap machines are used in medium- to high-volume packing and shipping applications.

Cast Stretch Wrap Films—The film protects the contents from tampering and damage, and is quieter to apply and has more cling than blown film. It also provides improved clarity over blown film for viewing bundle labeling and requires less force to stretch the wrap during application, reducing worker fatigue.

Blown Stretch Wrap Films—Blown film is less likely than cast film to change shape or stretch after application, which makes it a good choice for heavy, irregular loads with sharp edges.

Blown Anti-Static Stretch Wrap—Used to protect sensitive electronics from electrical shock or static during storage or transportation.

Extra-Wide Portable Stretch Wrap

Stretch wrap covers more of the pallet than traditional wrap. This reduces the number of times a worker must walk around the pallet to cover it completely, minimizing fatigue and conserving wrap for cost efficiency. Wrap is applied using a rolling dispenser and can easily be wheeled around a facility.

Gauge	Overall Width	Overall Length	Item No.
80 ga	40"	5,000 ft	**56HG15**
80 ga	50"	5,000 ft	**56HG16**
80 ga	60"	5,000 ft	**56HG17**

Pre-Stretched Wrap

Stretch wrap has been mechanically stretched close to the breaking point, then wound onto rolls, requiring less energy to hand wrap around a pallet. Offers consistent wrapping tension, good load stability, and light weight. It can be applied using a walk-forward technique.

Gauge	Overall Width	Overall Length	Cling Type	Rolls per Case	Item No.
25 ga	17"	1,476 ft	2-Side	4 Rolls	**56HG13**

39 ga	15"	1,476 ft	2-Side	4 Rolls	**56HG14**

GOODWRAPPERS HANDWRAPPERS

Top Sheeting Replacement Roll

Top sheeting is used to cover the top of a pallet before wrapping the sides. Replacement rolls are composed of perforated sheets. They have handles with brake and are smaller than top sheeting rolls, making them ideal for low-volume and hand-wrapping applications.

Product-Concealing Stretch Wrap

15A905

Opaque cast wrap provides added security by hiding product labels when shipping sensitive or valuable items. It is a continuous length of plastic that is wrapped around the sides of a pallet or bundle to protect the package from dust and moisture, prevent and indicate tampering, and keep items together.

Handle Opaque Stretch Wrap Films—Wrap has an integrated handle that protects hands from the sharp edges of the core, reduces cuts and abrasions, and eliminates the need to purchase a handle separately.

Hand Opaque Stretch Wrap Films—Wrap is manually wrapped and can be applied with or without a handheld dispenser. These rolls are smaller than machine-grade wrap rolls, making them easier to transport around a facility. Hand-grade wrap is used in low- to moderate-volume wrapping applications and can be used to wrap boxes and irregular loads or bundles, such as lumber.

Machine Opaque Stretch Wrap Films—This wrap comes on a larger roll than hand-grade wrap and is installed on a stretch wrap machine. It is used in medium-to-high volume packing and shipping applications to conceal bundle contents.

GOODWRAPPERS HANDWRAPPERS

High-Performance Stretch Wrap

Hand-Grade 49XF32

This wrap provides the same strength and puncture resistance at a thinner gauge than standard stretch wrap. It is a continuous length of plastic that is wrapped around the sides of a pallet or bundle to protect the package from dust and moisture, prevent and indicate tampering, and keep items together.

Hand-Grade—Used in low-to-moderate volume wrapping applications or to wrap boxes and irregular loads or bundles, such as lumber.

Machine-Grade—Larger and heavier than hand-grade stretch wrap.

Orbital Dispenser 6MGV3

End Caps 29PH58

Stretch Wrap Dispensers

These dispensers hold stretch wrap rolls, making it easier and quicker to manually apply stretch wrap to pallets and bundles.

Bar Handle Dispensers—Ergonomic handle and grip provide two-handed control when applying wrap. These dispensers are used with larger hand-grade stretch wrap, usually rolls 12" to 20" wide. Handles protect hands from sharp core material and reduce hand fatigue and strain.

Rope Applicators—These applicators apply wrap at full width and have an attachment that can be used to compress the full-width stretch wrap to the thickness of a rope. Stretch rope provides added stability over full-width wrap alone when bundling large or heavy loads.

Stand Up Bar Handles—Long handle allows workers to apply stretch wrap at the bottom of the pallet without stooping or bending at the waist or reaching up to wrap the top of tall pallets. They hold larger stretch wrap rolls, usually 12" to 20" wide.

Reusable Mini-Wrap Handles—Reusable handle and rotating mount allow workers to apply stretch wrap with one hand. The handle protects hands from the sharp edges of the core, reduces hand fatigue, and speeds application. Reusable mini-wrap handles are used with narrow stretch wrap rolls, generally 2" to 5" wide.

Orbital Bundler Dispensers—Manually-operated dispensers hold bundles off the ground while stretch wrap is applied vertically around the bundle. They can hold regular or irregularly shaped bundles. Arms can be adjusted vertically and horizontally to ensure bundles of different sizes are centered when wrapping.

End Caps—Caps are inserted into the stretch wrap roll core and protrude slightly from the core to provide a smooth surface that protects workers' hands from cuts and abrasions caused by sharp core edges. End caps can be removed and reused.

Steel Ramp 6HH16

Stretch Wrap Machine 3KB51

Stretch Wrap Machines, Turntables, and Ramps

Machines—Rotate the product and apply wrap in one operation, eliminating the need for workers to walk around a pallet, reducing worker fatigue, and freeing them up for other tasks. Use them on loading docks and in storage facilities to wrap pallets with uniform or irregular sides.

Turntables—Electric turntable holds the bundle and slowly rotates while workers stand in one place and hold the wrap. Use stretch wrap turntables on loading docks and in storage facilities to wrap pallets with uniform or irregular sides.

Ramps—Ramps allow operators to use a pallet jack to load heavy pallets onto stretch wrap machines and remove the pallet when wrapping is complete. The jack is pushed up the ramp, providing quick access to the machine table.

Heat-Activated Shrink Wrap Films

Wrap tightly around items to keep them contained during transport or protected against weather. Film shrinks when exposed to heat. Use to protect small packages, loaded pallets, and dry docked boats. For use with heat guns or shrink tunnels, sold separately.

Industrial, Single-Wound Polyethylene Shrink Films—Waterproof, durable, and high puncture and tear resistant. Provides UV protection for up to 9 months. Shrink with propane heat gun, sold separately.

Centerfold Polyolefin Shrink Films—Polyolefin wrap is approved for direct food contact. It forms a skintight protective wrap over packages.

Centerfold PVC Shrink Films—Clear PVC has maximum shrink of 40%. This shrink film is economical for manual applications. It forms a skintight protective wrap over packages.

PVC Shrink Tubing—Provides crystal-clear, skintight wrap around contents. Makes bags of any length.

PVC Domed Shrink Bags—Domed feature provides extra space. Insert package into bag and seal open end.

PVC Shrink Bags—Insert package into bag and seal open end.

PVC Shrink Bands—Fit 4-, 8-, 12-, 16-, 24-, and 32-oz. deli pack containers with 4⅝"-dia. lid. Available clear or clear with red print that reads "Sealed for Your Protection." Preformed with round shape and built-in lip to quickly fit over container lids.

SIGNODE®

Standard Steel Strapping

Applied by hand, this strapping secures heavy loads with irregular or rough edges. **Standard-duty**, low-carbon steel strapping is for securing most moderate-to-heavy loads, such as heavy wooden crates. **High-tensile strapping** is used in the railroad industry. It is made of heat-treated high-carbon for use with heavy loads such as cement blocks, lumber, and machinery. **Portable standard-duty** is packaged on smaller rolls in a dispenser box. It is suitable for securing pipe and other quick strapping needs.

Seals for Steel Strapping

These high-grade galvanized steel seals are pinched tight around strapping ends to secure them in place. A tensioning tool is used to pull the strapping tight and a sealer tool compresses a seal to hold the strapping in place, see page 1424. **Open seals**, sometimes called snap-on or open flange seals, secure steel strapping around flat surfaces, such as boxes and pallets. They have an open face that is placed around the strapping during or after tensioning. **Pusher seals** secure steel strapping around round surfaces such as pipe and rebar. They are installed by threading the strapping through the seal.

Steel Strapping Kits

These kits include a selection of items that work together to hold, store, transport, tension, and seal steel strapping. Wheeled strapping carts store and transport coils and tools around a facility. Tensioners pull strapping tight to ensure a secure fit, sealers apply seals to keep the straps from slipping, and cutters cut strapping to length.

SIGNODE® CARISTRAP MIP Midwest Industrial Packaging

Strapping Carts

Carts secure coils through the core, so operators can pull strapping off the coil as needed. Wheels allow operators to move the carts around worksites. A brake stops the roll from turning or unwinding when not in use. A built-in bucket or tray holds tools and seals. **Carts for Plastic** hold polyester and polypropyene strapping coils. They are not compatible with steel or poly cord strapping coils. **Carts for Poly cord** are sized to hold poly cord strapping coils and are not compatible with steel, polyester, or polypropylene strapping coils. **Carts for Steel** hold core sizes and widths of steel strapping coils and are not compatible with plastic or poly cord strapping coils. **Carts for Plastic and Steel** feature an extension bar that holds wider cores than those generally found on steel strapping. They are for steel, polyester, and polypropylene strapping coils and are not compatible with poly cord strapping coils.

Cutter Tools for Steel Strapping

Cut off excess strapping to reduce the risk of injury caused by sharp edges. Strapping band cutters are used to cut steel and zinc-coated steel strapping to length, trim ends, and cut strapping free after it's been secured.

1-Handed—Use on light- to medium-duty strapping. One-handed operation keeps the opposite hand free.

2-Handed—Use with medium- to heavy-duty and high-tensile strength steel and zinc-coated steel strapping. Two-handed operation provides the extra power needed for quick cuts.

Combination Tools for Steel Strapping

These tools tension, seal, and cut steel and zinc-coated steel strapping in a single operation, eliminating the need to use different tools for each operation. They are used in medium- to high-volume applications to speed the processing and reduce operator fatigue over using separate tools to perform the same functions. Combination tools can be used on flat or round surfaces such as bundles and pipe.

Manual—Manually-operated tools can be brought to the work location and do not require an external power source or attachments, so are often used in applications where access to a power source is limited.

Pneumatic—Air-powered combination tools, are powered by a compressed air system. They speed the operation and reduce operator fatigue compared to manually-operated combination tools.

Sealer Tools for Steel Strapping

Crimp and secure strapping seals for steel and zinc-coated steel strapping. Strapping is wrapped around a bundle or package and tightened, then a seal is crimped in place using a sealer tool.

Manual—Use for low-volume applications or where access to an external power source is limited. They can be carried to the work location. The operator squeezes a lever to crimp and press the seal in place.

Pneumatic—Also called air-powered sealers, these tools connect to a compressed air system to automatically apply seals to steel strapping in medium-to-high volume applications. They can be used on flat and round surfaces, such as pallets and pipe, and are compatible with all seal sizes and strapping strengths.

Tensioner Tools for Steel Strapping

Pull the ends of the strapping to secure the strap around the bundle before sealing the ends together.

Manual—These tools can be brought to the work location and do not require an external power source or attachments. They are used for low-volume applications. The operator pushes a lever to tighten straps before a seal is applied using a sealing tool.

Pneumatic—Also called an air-powered tensioner, this tool connects to a compressed air system to secure the ends of steel strapping in medium- to high-volume strapping applications. The operator presses a button or squeezes a lever and the tool automatically tightens the steel strapping, speeding operation and reducing fatigue. It can be used on flat or round surfaces, including bundles and pipe.

Poly Cord Strapping

Embedded cords provide more strength and higher resistance to shock and tearing than standard polyester. Poly cord is similar in strength to steel strapping but is more flexible. It does not scratch or mar surfaces and is more resistant to shock. It won't rust and withstands temperature changes when used outdoors. The ends are secured using a handle tie or sealed with a strapping buckle, seal, friction weld, or heat. Apply and seal using a strapping machine or manually-operated tools.

Nonwoven—Light-duty strapping (sometimes called composite strapping) has embedded fibers along its length to resist snapping and tearing when securing lightweight boxes, papers, and magazines.

Woven—This nonmarring cord is used to secure heavier loads than nonwoven poly cord. Fibers run the length of the strapping and across the strapping to provide added strength and resistance to breaking. Use to secure bundles of brick, stone, and steel.

Buckles for Poly Cord Strapping

Metal buckles maintain tension on poly cord strapping. Each end of the strapping is wrapped around the buckle and tightened using a tensioning tool. The buckles use strap tension to hold strapping in place and do not require sealing. They have a phosphated seal finish. **Standard-duty buckles** secure poly strapping in light-to-medium weight strapping applications. **Heavy-duty buckles** resist corrosion and secure poly strapping in medium- to heavy-duty applications, such as securing lumber, bricks, stone, metal, and pallets.

Poly Cord Strapping Kits

These kits include a selection of items that work together to hold, store, transport, tension, and seal poly cord strapping. **Metal buckles** secure heavy products such as lumber, bricks, stone, or metal. **Plastic buckles** resist corrosion, won't scratch packages, and are ideal for bundles shipped using the U.S. Postal Service. **Strapping, tensioner, buckles, and tool box** kit lets your wrap strapping around a box, bundle, or item and then wrap each end of the strapping around the buckle. Pull the strapping tight using a tensioner. Buckles use strap tension to hold strapping in place and do not require sealing. Tool boxes hold and transport all necessary items.

Tools for Poly Cord Strapping

Tension and cut strapping after it has been threaded through a buckle. Correct tensioning ensures bundles or packages stay secure. **Manual tools** can be carried to a work location. They do not require an external power source or attachments, so are often used in low-volume applications where access to a power source is limited. **Battery tool** is rechargeable and easily moved around a worksite. **Pneumatic tool** speeds processing and reduces fatigue compared to manual tools when used in medium-to-high volume settings.

Polyester Strapping

These coils secure lumber, heavy pallets, and other medium-to-large loads for storage and shipment. Polyester construction is noncorrosive so it will not damage surfaces. It is a safer alternative to steel and is more rigid and stretches less than polypropylene strapping, allowing it to retain tension over time. Polyester strapping is stronger than polypropylene strapping, but has less overall strength than stainless steel strapping. Apply strapping using manually-operated strapping tools or a strapping machine.

Hand-Grade—Manually apply to lumber, heavy pallets, and other medium-to-large loads. This strapping is generally used in low-to-moderate volume applications. It is secured using tensioning tools, seals, and sealers.

Machine-Grade—This strapping does not require seals. Automatic strapping machines are used in moderate-to-high volume applications.

Seals for Polyester Strapping

A textured surface grips the smooth polyester surface to prevent the strapping from slipping and losing tension. Secure seals using a manual strapping sealer.

Open—These seals secure polyester strapping on flat surfaces. They are placed over the strapping during or after tensioning and can be used where high-tensile strength is needed.

Gripper—Sometimes called serrated seals, these gripper-style seals have barbs that grip the polyester strapping.

Combination Tools for Polyester Strapping

- Friction weld joint type

Tension, seal, and cut strapping in a single operation, eliminating the need to use a different tool for each operation. Combination tools can be used on flat or round surfaces, and are used in medium-to-high volume applications.

Battery—A rechargeable battery allows the tool to be easily moved around a worksite. One-hand operation with no need for external attachments or power sources.

Pneumatic—Also called air-powered combination tools, these pneumatic tools are powered by a compressed air system. They can be operated with one hand.

Seals and Buckles for Polypropylene Strapping

2CXP3

- Regular-duty seals
- Flat seal surface

Apply to overlapping strap ends to maintain tension and keep the strapping from slipping.

Open Seals—Secure poly strapping on flat surfaces using a manually-operated sealing tool. Seals are placed over the strapping during or after tensioning and can be used where high-tensile strength is needed.

Buckles—Strapping is threaded around the buckle and pulled tight. Buckles are held in place with the tension on the strap and do not require special tools to ensure a secure fit.

Polypropylene Strapping Kits

These kits include a selection of items that work together to hold, store, transport, tension, and seal polypropylene strapping. Polypropylene strapping, sometimes called poly strapping, is a lightweight strap used to bundle newspapers, seal and bundle cartons, and secure light loads. The embossed surface makes the strapping flexible to make it easier to bend the strapping around edges and irregular shapes.

Strapping, Tensioner, and Buckles—Strapping is wrapped around a bundle and tightened with a tensioner tool. The ends of the strapping are wrapped around the buckle and tightened manually.

Strapping, Tensioner, Sealer, and Seals—These items work together to perform all the tasks required to strap and secure strapping. Pull the strapping tight using a tensioner, then use a sealing tool to secure a seal that ensures strapping does not come loose.

Strapping and Seals—Lightweight strap is used to bundle newspapers, seal and bundle cartons, and secure light loads. Seals secure strapping to maintain correct tension.

Strapping and Buckles—These kits can be used to replenish supplies at workstations and on strapping carts, or can be used independently of carts and workstations. The buckles are secured manually, without the need of a sealing tool.

Corrugated

HDPE

No Stack Cones

Corrugated cone attaches to the top of a shipment with packing straps as a notification that the pallet will not tolerate the weight of stacking.

HDPE pallet cones resist bending compared to corrugate pallet cones.

PAC Strapping Products Inc. SIGNODE

Semi-Automatic Strapping Machines

These machines tension and heat-seal plastic strapping in medium- to high-volume shipping applications, such as loading docks and fulfillment centers. These machines require the operator to feed the strapping around the package. They speed processing and reduce operator fatigue by eliminating the need for workers to manually tension and seal strapping.

Edge and Corner Protectors

Edge and corner packaging protection helps safeguard large packaging from dents and damage during shipment or storage. They are placed on and around boxes and containers to help stabilize and protect items.

Shipping & Receiving Bench Scales

These scales weigh or count the number of packages to be shipped and determine accurate shipping cost estimates.

GENERAL PURPOSE UTILITY BENCH SCALES

They have a analog or LCD readout capability. The display is on the front of the scale rather than on the extended neck included with platform scales.

POSTAL BENCH SCALES

These scales, also known as parcel scales, weigh packages using software that is compatible with UPS, FedEx, USPS, and other postal carrier shipping systems. These scales display weight information only on an LCD readout.

COMPACT COUNTING BENCH SCALES

Scales can measure both the weight of items to be shipped and the total number of parts to be shipped. A sample of one item is used to calculate the entire quantity of items. The LCD or LED display is located on the front of the scale, rather than on the extended neck included with platform scales.

PLATFORM COUNTING BENCH SCALES

These bench scales have a large platform for weighing more items and larger packages than compact counting scales. These scales can also be used to count the number of items being weighed by sampling an individual item and calculating the total quantity. The LCD display is located above the scale on an extended removable neck pole.

MEASURETEK OHAUS B-TEK ADAM PINNACLE SCALE FAIRBANKS®

Shipping & Receiving Floor Scales

Shipping and receiving floor scales measure the weight of heavier items than bench scales. Floor scales are commonly used to weigh drums, pallets, and bulk cargo in shipping and receiving docks.

COUNTING FLOOR SCALES

These scales are large, flat scales with a remote display that can be viewed when the scale is covered by large objects such as a group of boxes or paint cans.

PALLET FLOOR SCALES

Pallet scales are large floor scales used to weigh items loaded on standard pallets. These scales indicate the weight of the entire object being weighed, including parts of the item that hang over the edge of the scale. Ramps for use with a forklift can be added to pallet scales.

BEAM BALANCE FLOOR SCALES

Beam balance floor scales have a graduated scale display similar to scales in medical exam rooms. These scales can be used in areas where electricity is not accessible.

DRUM FLOOR SCALES

Scales have a digital display and are for weighing plastic and steel drums up to 2500 lb.

PLATFORM FLOOR SCALES

These scales are larger than bench platform counting scales and can fit larger items. They are placed on a packaging station floor, rather than on a countertop or bench, and are used to measure heavy items. Weight information is displayed on a removable neck.

GENERAL PURPOSE COMPACT BENCH SCALES

These bench scales are designed for use in general purpose applications.

COMPACT COUNTING BENCH SCALES

These scales offer digital operation. Counting scales can be powerful asset for parts counting in applications such as inventory and quality inspections in warehouse or production environments.

WASHDOWN GENERAL PURPOSE COMPACT BENCH SCALE

This washdown scale is suitable for use in washdown environments. Features digital operation and offer quick entry of SKU package, item, and tare weights using alphanumeric keypads and dual-line alphanumeric display.

WASHDOWN COMPACT COUNTING BENCH SCALE

Scale is suitable for use in washdown environments, such as industrial and food processing applications. Functions include weighing, checkweighing, and parts counting. IP68 waterproof scale has ABS housing with removable stainless steel platter. Powered by AC adapter and NiMH rechargeable battery.

Lab Scales

- LCD

Precision balance scales provide outstanding weighing performance and can be used for many different things for example, pharmaceuticals, chemical companies, and more.

5RCZ4, 5RCZ5, and 5RCZ6—Functional, portable design include high-contrast backlit LCD, hinged pan cover, low-battery indicator, and auto shutoff. Operate on 2 AAA batteries (included).

5AE95 and 5AE96—Compact and portable units have a low battery indicator and overload and underload indicators. Constructed with a protective snap-on cover and button activated luminescent display. Easy to calibrate. Operate on 2 AAA batteries (included).

3WRE8—Compact and portable IP67 washdown scale is great for harsh industrial environments, wet areas, and kitchens. Removable pan can be fully submersed in water for cleaning. Uses 6 AA batteries or AC adapter (optional). Battery level indicator with auto shutoff.

Digital Food Scales

- LCD display

Scales are for use in industrial and food processing applications where consistent weight control is essential. Units are durable enough to meet the needs of the required application, while maintaining the importance of accuracy.

1NZA5, 1NZA6, and 1NZA8—Constructed with stainless steel housing and pan with added chemical resistance. Functions include weighing, percent weighing, combined zero/tare, and specific gravity (S). Operate on AC adapter or up to 100 hr. on 4 C batteries (not included).

3NZG9—Compact scale is ideal for commercial food service applications. Includes a tare function and auto-off feature. Runs on batteries (not included) or AC adapter.

Mechanical Hanging Scales

Designed to be suspended from an overhead anchor point, each features a hook to hang an object to determine its weight. Used in places where no flat, stable surface is available. Applications include agricultural feed portioning to weighing fish and game. Can also weigh shipping packages.

3JKN1—Constructed of heavy-gauge japanned steel with a large, easy-to-read dial. Includes convenient zero adjustment screw and plated top loop and bottom hook.

5A354 and 4VG68—Feature a heavy-gauge solid brass construction with precision steel springs. Can be used in salt water applications. Feature avoirdupois and metric graduations.

3JKN5 and 3JKN7—Extra heavy-duty steel and cast-iron construction and have a recessed pointer with deeply embossed numbers and graduations.

Calibration Weights - Certifications and Classifications

DOCUMENTATION:

- **Traceable—**Certificate meets ISO and traceability requirements for Classes 4 to 7 and Class F weights

CLASSIFICATIONS:

- **Class 5 & 6—**Weights used for laboratories
- **Class 7—**For rough weighing operations in physical and chemical laboratories, such as force measuring apparatus

RICE LAKE WEIGHING SYSTEMS

Calibration Weights

- More sizes, documentations, and classifications are available online, see Grainger.com®

For routine calibration of scales or verification checks.

CAST IRON

Painted weights with an adjustable sealing cavity. Typical application is field standard for testing industrial weighing devices.

SLOTTED

Weights with a slot to stack on a hanger for checking or calibrating devices that do not have a surface to stack weights.

STAINLESS STEEL

Type 2 design weights feature a sealing cavity for adjusting material in 100g or larger weights. Applications include field standard for testing light industrial weighing devices.

Types of Disposable Cups

Poly-Coated (PE) Paper

Polymer coating provides extra insulation and makes these cups ideal for hot or cold beverages. This material also helps protect the outside of the cup from weakening due to condensation or "sweating."

Foam

A great option for hot or cold beverages, foam cups hold their shape better than paper cups. 1-pc. molded construction provides effective insulation in a durable, low-cost vessel.

PET

Polyethylene terephthalate, or PET, is part of the polyester family and is lightweight and proficient at blocking moisture. PET cups are also strong and impact-resistant. Use only with cold beverages. Recyclable.

PLA

Polylactic acid fiber is a nontoxic, sustainable material made from plant-derived materials. Provides an eco-conscious alternative to petroleum-derived products.

Polystyrene

Heavy-duty, flexible cups have a medium wall construction that flexes but still remains crack-resistant, making them a perfect choice for parties and catered events.

DART®

White Cold/Hot Foam Cups & Lids

Standard white foam cups are an economical and efficient choice for insulating beverages. Not microwave safe.

SmartStock™ CUTLERY DISPENSER DIXIE

SmartStock Dispensers and Cutlery

Enclosed dispensers store utensils and distribute one at a time for hygienic dispensing. Also help reduce waste and countertop clutter. Mini Dispensers are 30% shorter and take up 30% less counter space versus the Classic SmartStock Dispenser. Dispensers work with preassembled disposable cutlery refills, see table below.

NEWCO BUNN CRESTWARE

Airpot and Infusion Coffee Brewers

- NSF Certified (except leaver airpots)
- For coffee, see page 1440

Stainless steel units brew directly into airpots (sold separately). Newco 48FP52 is a fresh water system and only boils the required amount of water that is poured into the brewer, for a fresher cup of coffee. 48FP57 features a dump valve system and a water level detection system and a tank on/off switch. Bunn airpot brewers include hot water faucet and cold brew lockout capability. SmartWAVE brewers are low-profile and feature an energy-saver mode.

Decanter-Style Coffee Brewers

- NSF Certified
- UL Listed
- 120V, 15A
- Stainless steel
- Carafes not included
- For coffee, see page 1440

Automatic Electric Coffee Brewers—Use dump valve solenoid operation for accurate brew volumes and brew temperatures. Standard ready light, pulse water inlet, gravity fed water faucet, and auto-arm with a smart multi-server base design. Plumbing required.

Pourover Coffee Brewers—Have a traditional displacement hot water tank system, a ready light for optimum brewing temperature, and a master On/Off power switch.

Kitchen Utility Carts

- 2 raised handles
- 4 swivel casters
- Shipped unassembled

Utility carts are lighter than metal shelf and utility carts and can resist dents, corrosion, and water damage. Carts are used to organize, transport, and store items in a wide range of settings, including offices, schools, mail rooms, medical facilities, loading docks, warehouses, and stock rooms.

Bulk Storage Bins

Stores dry bulk ingredients.

MOBILE BULK STORAGE BINS

Sloped, clear plastic hinged lid. 3" casters (2 rigid, 2 swivel).

BULK STORAGE BINS

Allow 1-handed access to contents while bins are stacked. Feature first-in, first-out barrier for proper rotation of ingredients. Clear windows and ingredient labels. Include scoop.

MOBILE INGREDIENT BINS

Clear sliding lid reduces handling and provides quick content identification. Designed to fit under work tables. All bins have a slant top, except 4UJT2 has a flap top. No liners are needed. 3" casters with 2-front swivel, and 2-fixed. Scoop not included.

Food Service and Food Processing Cutlery

Stain-free, hand-honed blade provides ultimate edge for easier slicing.

Basics—Slip-resistant polypropylene handle.

Traditional—Natural hardwood handle is secured to blade with brass compression rivets.

Sani-Safe—Textured, slip-resistant handle withstands high and low temperatures. Impervious blade-to-handle seal provides sanitation.

Prodex—Pronounced ribbed textured handle provides slip-resistance gripping positions.

SofGrip—Nonslip soft rubber grip helps reduce stress, fatigue, and common wrist injuries.

iCUT-PRO—Soft Santoprene handle for comfortable grip. German stainless steel blade provides durability.

Scales TAYLOR.

Mechanical—Rotating dial allows container weight deduction and ingredient measuring. Removable stainless steel platform and shatter-proof lens protect dial, except plastic model 3NZN2. 3NZN2 includes dish-washer safe bowl and lid and weighs in ¼ oz. and 5g increments.

Digital—LCD readout with tare and auto/off features. Overload and low battery indicators. 3NZG9 and 3NZH1 include AC adapter or operates on one 9V battery. All others run on batteries only.

Stainless Steel Food Processing Tools

Electropolished finish enhances corrosion resistance and allows easier cleaning.

Shovels—D-handle shovels are specifically designed for use with food, drug, beverage, and chemical processing equipment. Can also be used as a snow shovel.

Forks—For meat, poultry, and other industries where cross-contamination is a concern.

Scoops—Pharma scoops are ideal for use in the pharmaceutical industry and other hygienic applications.

Pails—Heavy-duty, corrosion-resistant construction with no rolled edges or areas to collect dirt or bacteria.

Mixing Paddles—Durable paddles are ideal for moving bulk materials.

Dump Buggies—Heavy-duty construction with a reinforced bottom plate and solid top rim. Standard lifting fitting can be used with most standard loaders and dumpers. Include push handle, replaceable molded plastic wheels, stainless-steel spanners, nuts, and bolts. Use in food processing plants to move food products from one operation to another.

Popcorn Makers and Wagons

Popcorn Makers have enclosed heat lamp and heated corn deck that keeps popcorn warm. Auto shut off safety features included with Goldrush and T-3000 models. Eye level rocker control switches and illuminated kettle heat switch makes machine easy to operate. The 1-pc., nickel plated all steel popping kettle features a clean-in-place design. 31EW23 includes 32 oz. popper and caramelizer mounted on welded stainless steel table; ideal for caramel corn and cheese corn production.

Commercial Refrigerators and Freezers

Provide years of reliable service in demanding commercial applications. Most models come with heavy-duty casters (height does not include casters). Include NSF-certified temperature gauge and a dynamic condenser that delivers superior performance in high-temperature food service environments. Adjustable shelves feature stainless steel supports and chrome-plated clips. Freezer lids include locks, except for 6PPK6 and 6PPK8.

Note: For repair parts, go to Grainger.com.

Pillows

SURE CHECK

Self-deodorizing, nonallergenic, and flame-retardant pillows have thousands of microscopic vents covering the entire pillow. These vents help destroy bacteria by allowing fresh air to flow through the pillow.

GOLD CHOICE

The poly-cotton ticking with extra hollow siliconized fiber fill of these pillows provides ideal comfort and support.

MICROVENT SOFT

Durable without sacrificing comfort, the microscopic air vents as well as an antibacterial, antistatic, flame-retardant, and fluidproof finish make these pillows an ideal choice for healthcare facilities.

MICRO DENIER

Soft micro fiber filling provides a down-like feel using blown polyester. Pillows have a 100% cotton T230 ticking with piped edges.

MARTEX BRENTWOOD

Cluster fiber pillows have a down-like softness and are easy care. Soft and comfortable microcluster polyester fiber fill with polyester/cotton cover.

COMFOREL

The 100% cotton T230 ticking with piped edges and cluster fiber fill provide both comfort and support. The hypoallergenic and antimicrobial protection inhibits a variety of odor causing molds, bacterias, and funguses. Washable.

ECOPURE

Soft, warm, and comfortable fiber fill reprocessed as a recycled, environmentally friendly product with cotton cover.

LOCK-UP®

Bedding Encasements

Lock-Up pillow, mattress, and box spring encasements trap any existing bed bugs and keep invading bugs out. Pillow and mattress covers also protect against allergens and dust mites, and have soft, breathable fabric for comfortable, sound sleep. Pillow cover is water-resistant. Premium mattress covers have a waterproof lining and feature a double-zipper enclosure for added protection. Standard mattress covers have a waterproof top and also feature a double-zipper enclosure. Box spring covers are durable stretch knit with double-knit corners for snag protection.

Bed sets feature a high-performance, foam-encased edge system to support sitting and sleeping. The twice-tempered coils will maintain approximately 98% of their height over the lifetime of the mattress. Open coil unit is supportive, comfortable, lightweight and easy to handle. The gel-infused foam inserts help to promote a cool, restful sleep. A no-skid foundation keeps mattress in place for easier housekeeping.

Institutional Bunks and Beds

- Polyethylene construction

Feature durable, one-piece, rotationally-molded design for increased strength. These beds are easy to clean and maintain and are stain-resistant. Ideal for use in correctional and behavioral health facilities, residential institutions, and public safety facilities. Endurance Bunk has molded-in side slots for property box storage and can be reverse-mounted to eliminate property box storage feature. Endurance Bed 2.0 is designed with lower side rails that help make entry and exit easier, and end shelving provides open storage for personal items.

Pool Care Troubleshooting Guide

Skin and Eye Irritation—Caused by improper pH levels of the water in your pool or spa, especially a pH level of below 7. Test the water pH level; adjust as needed to maintain the proper pH range of 7.2 to 7.6. Shock to destroy any contaminants.

Algae Problems—Test and adjust your pool or spa water pH level to 7.4. If you are seeing the beginning of algae growth, shock the water. Wait 24 hr. after shock and then use an algaecide.

Cloudy Water—Check the filter system and pump to make sure they are operating effectively. Check the filter for holes that are letting fine particulars pass through. Make sure you are running the filter long enough to clean your pool. Test water for total alkalinity and pH and adjust as needed. Check the chlorine level and check for the presence of dead algae. Shock the water. Use a clarifier for small particles that the filter does not catch.

Pool Chemicals

Keep water in hot tubs, whirlpools, and swimming pools crystal clear, clean, and healthy. Weekly monitoring with test kits ensures all water is balanced and safe for use in spas, hotels, and health clubs.

Balancers—Balancing your pool water ensures that it has an optimal pH level, including total alkalinity and mineral content levels.

Chlorine—Chlorinating your pool water properly sanitizes it, killing harmful bacteria and aiding in the control of algae.

Pool Shock—Water shocking formulas have algae killing crystals which control and kill off green, black, and mustard algae along with bacteria. Reduces chlorine odor and removes swimmer containments such as body oils, sweat, and urine. Shocking the water cleans cloudy water without impacting pH, helping the water stay clear. 494P18 is a 4 in 1 formula; kills bacteria, is suitable for vinyl pools, improves filter performance, and the water is swim-ready in 15 minutes. 494P19 is a 6 in 1 formula; kills and prevents algae, kills bacteria, is suitable for vinyl pools, improves filter performance, the water is swim-ready in 15 minutes, and is fast dissolving.

Algaecide—Quickly and effectively kills green, mustard, and black pool algae. For use with all pool types. Stays active in your pool water, with minimal loss of effectiveness due to water temperature, sunlight or swimming use.

Filter Aid—Granular formula with pure diatomaceous earth removes small particles and metals from swimming pool water.

Water Clarifier—Aids water filtration by binding together microscopic particles that are too small, and making them easier to remove.

Water Test Kit—Offers 6-way test strips to test your water weekly to prevent pool water problems. Tests for total hardness, total chlorine, free chlorine, pH, total alkalinity, and stabilizer. Free online water testing available.

Water Analysis Kits—Detect a wide range of bacteria, including E. coli, pseudomonas, Klebsiella, and salmonella.

Pool Lifts and Accessories

- ADA compliant

Lifts provide access to aquatic environments for both mobility-challenged individuals and seniors. Lifts feature true operational redundancy and can be operated from the control box and the handset. Hi/Lo 11Z850 can be used for facilities that have both in-ground and above-ground spas and pools.

Note: Deck profile sheet required with order; returns not accepted.

Splash!—Removable lifting system easily detaches from the stainless steel deck anchor.

PAL (Portable Aquatic Lift) and PAL2—Lifts are portable and free-standing. Can be fixed to the deck with optional Pool Lift Wheel-Away Kit 16V951, sold separately. Option to store when not in use.

Pole and Crank

Motor with Remote Control Operation

Exterior Sun Shades

- Easy-install system

Motor with Remote Control Operation, PVC Coated Polyester Yarn—Powered by a 12-ft. AC cord on right side of shade (cannot be moved to left side). A cable system secures shade and helps prevent flapping during light winds. The remote control is a multi-channel remote. Each remote can operate up to five shades. Hardware is oil-rubbed bronze and power cord and remote are white. Fabric comes standard as a reverse roll.

Pole and Crank Operation, PVC Coated Polyester Yarn—A flexible bungee system helps prevent flapping in light wind. Includes a 48" pole (with receiving ring on the right side of the shade). Hardware and crank pole are oil-rubbed bronze. Ring can be moved to the left side of the shade. Fabric comes standard as a forward roll.

Aluminum Bleachers

Feature all aluminum construction. Tip & roll bleachers have swivel casters for movement, and caster brakes keep the bleacher from rolling when stored as well as non-marring rubber footpads to protect wood floors. Always check your local code for bleachers to ensure you are compliant. ADA options are available; go to Grainger.com and search "ADA Compliant Aluminum Bleachers".

Commercial-Grade Resin Chairs, Tables, and Umbrellas

Grosfillex

Durable, weather-resistant outdoor furniture is constructed for heavy-duty use in commercial environments. Molded melamine table tops are highly weather-resistant, as well as burn-, heat-, and scratch-resistant, to help minimize maintenance costs. ASTM tested 400-lb. weight capacity meets the high performance standards for nonresidential use. Include manufacturer commercial warranty.

Market Umbrellas—Provide shade and protection from the elements in outside food areas. 2-pc. wooden construction includes corrosion-resistant brass connectors, durable and color-fast canopy acrylic fabric, 8 ribs and a wind vent.

Umbrella Bases—Secure umbrellas to tables. 6DVK1 is sand- or water-filled and features a nonmarring resin glide. 6DVH3 is cement-filled and features molded anchor bolt holes to secure base to deck. UV-resistant and easy to clean with soap and water.

enMotion Motion-Activated Roll Towel and Dispenser Systems

enMotion motion-activated paper towel systems combine hands-free, touchless hygiene and jam-free performance for state-of-the-art, quiet dispensing with an attractive, sleek design. One-at-a-time automated dispensing helps prevent cross contamination and improves hygiene. Convenient and customizable settings include: delay, sheet length, and dispense mode so hands-free dispensers can be programmed to meet your specific operational needs, while also helping to reduce waste.

Each touchless dispenser features a set of batteries with excellent battery life to dispense up to 150 rolls, help reduce maintenance, and improve reliability. They come with a one-time, lifetime sublease agreement from Grainger (see bottom of page), backed by a 10-year warranty from Georgia-Pacific.

enMotion brand towels are soft, thick, and absorbent. Long-lasting rolls help reduce the time spent filling dispensers. EPA-Compliant, recycled rolls are also available.

8-in Wide enMotion Flex Paper Towels Rolls and Dispensers

- Hardwound rolls
- Motion-activated dispensers

Disposable paper towels dry hands, wipe surfaces, and clean up spills. Hardwound rolls are compatible with corresponding dispensers. Hands-free dispensers offer 99% jam-free dispensing. Dual-roll, auto-switch technology uses the smallest roll available first and uses 100% of the roll before switching to the standby roll to ensure zero waste. The intuitive design makes refilling easy. Automated dispensers are proprietary and are designed to be used with compatible hardwound paper towel rolls.

8-in Wide enMotion and enMotion Impulse Paper Towel Rolls and Dispensers

- Hardwound rolls
- Motion-activated dispensers

Paper towel rolls offer softness and absorbency to dry hands and clean surfaces quickly. Rolls are compatible with corresponding dispensers. Dispensers have adjustable settings and offer 99% jam-free dispensing. All dispensers are plastic, surface wall-mount, except 2NY13 is stainless steel, recessed mount. Batteries included. 2NY14 and 2NY15 are ADA-Compliant trash receptacles for use with 2NY13 dispenser. Motion-activated dispensers are proprietary and are designed to be used with compatible hardwound paper towel rolls.

Dispenser Sublease Information

Note: The enMotion towel dispensers, owned by Georgia-Pacific Consumer Products LP (GP), are not available for sale, but are subleased to end user customers by Grainger, an authorized distributor of these products. The Grainger price is therefore a one-time sublease acquisition fee. The sublease requires that only Georgia-Pacific enMotion products be used in these dispensers. By paying the one-time sublicense fee, you hereby agree to be bound by the sublease. You can review the sublease by visiting Grainger.com listing for the relevant product.

Pacific Blue Ultra Paper Towel Rolls and Dispensers

52RW80

52RW81

- Hardwound rolls

High-capacity paper towel rolls dispense one-at-a-time. Use with compatible proprietary Pacific Blue Ultra motion-activated or pull paper towel dispensers. Motion-activated dispenser offers touchless, hands-free dispensing using infra-red sensors. Manual pull dispenser has no buttons, levers, or cranks, eliminating any touch points that would spread germs.

Paper Towel Sheets and Pull Dispensers

Multifold—Interfolded for continuous one-at-a-time dispensing. Eliminates tabbing, tearing, and multiple towel dispensing.

Single-Fold—Sheets are folded in half for one-at-a-time dispensing.

C-Fold—Folded into the shape of a "C" and stacked on top of the other for single sheet dispensing reducing tabbing.

Dispensers—Pull paper towel dispensers are manual operation with no buttons, levers, or cranks to spread germs.

Compact Coreless Toilet Paper and Dispensers

TOILET PAPER ROLLS
Coreless design eliminates stub roll waste. Poly package reduces inventory space and provides easier product storage than corrugated boxes.

TOILET PAPER DISPENSERS
Covered design fits any decor and allows one-at-a-time roll usage, while protecting the spare roll.

TOILET PAPER ADAPTER SPINDLES
Cost-effective way to double tissue capacity using your existing standard-size dispenser.

General Purpose Dry Wipes

Dry wipes absorb spills, clean messes, and dust surfaces. Use as an alternative to cloth towels to help prevent cross-contamination and to paper towels for added strength. Wipes come with different levels of absorbency and strength.

Light-Duty Small Task Wipes—Single-use task wipes are commonly used to clean smaller spills and messes on glass and smooth surfaces.

Medium-Duty Routine Task Wipes—Wipes have a cloth-like softness for cleaning and polishing, as well as wiping hands and faces.

Heavy-Duty Large Task Wipes—Clean large surface areas on equipment and in vehicles. Disposable, absorbent alternative to economy rags.

Extra Heavy-Duty Repeat Task Wipes—Resistant to harsh cleaning agents, these wipes can be used many times before discarding. Use on abrasive surfaces to clean up oil, dirt, and grime. An alternative to premium rags and shop towels.

Critical Area and Delicate Task Wipes

- Low lint

Soft and nonabrasive, wipes are used on delicate items like small parts and lab instruments and won't leave fibers behind on electronics or lenses.

KIMTECH Prep ScottPure—Cloth-like softness with high absorbency for cleaning and disinfecting.

WypAll—Wipes are acid-, base-, and solvent-resistant to prepare surfaces and clean up oil, grease, and ink.

Cleanroom Dry Wipes

- Low lint

Commonly used to remove surface contaminants and spills in controlled environments with low levels of pollutants like dust, airborne microbes, and chemical vapors.

KIMTECH Pure W4—Acid-, base-, and solvent-resistant. Wipes are double-bagged in an antistatic package.

KIMTECH Pure W5—High absorption rate and capacity. Double-bagged in an antistatic package.

Tough Guy—Laser-sealed edges.

EXCEL

XLERATOR Touchless Hand Dryers

- Up to 95% cost savings compared to paper towels
- Use up to 80% less energy than conventional models
- UL Listed and CE Certified

Innovative hand dryers feature reliable performance and can dry hands up to 3 times faster. These industrial models come with adjustable speed and sound. BuildingGreen Approved and can help you qualify for LEED v4 credits and Green Globe Certification.

Heated Air—Feature adjustable heat setting controls and an externally visible LED service light.
- 8 sec. dry time
- 3.7 Wh energy per use

Non-Heated Air—No-heat technology helps provide reliable and highly-efficient performance.
- 10 sec. dry time
- 1.7 Wh energy per use

ThinAir—Surface-mount design has a slim profile, adjustable heat setting, and externally visible service LED.
- 14 sec. dry time
- 3.7 Wh energy per use
- C-UL Listed

Accessories—Wall Guards 15Z471, 15Z472, and 38G831 feature an antimicrobial surface. Xchanger Combo Kits 38G830 and 38G829 include a recess accessory.

dyson

Airblade Hand Dryers

- 110 to 127V
- Integral nozzle

Touch-free design provides an extremely fast and hygienic way to dry hands. 50% quieter than original Dyson Airblade dryers and tough enough for high-traffic areas. HEPA filter removes 99.97% of bacteria from air used to dry hands. Engineered to fit a variety of restroom environments. 489J80, 489J76, and 489J78 are tap-operated combination units that allow you to wash and dry hands at the sink.

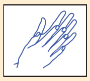
Correct Handwashing Technique

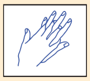
Hands should be cleaned, at minimum, at the end of each work period, prior to breaks, and when visiting the bathroom. Developing good handwashing technique is essential to ensure hands are thoroughly clean. After hands are washed, it is also important to make sure that they are thoroughly rinsed and dried to help keep skin from chapping and cracking.

Proper technique includes the following:

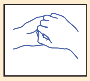
Rub palm to palm



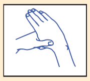
Rub palm over the back of the hand, fingers interlaced



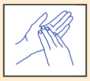
Palm to palm fingers interlaced



Fingers interlocked into palms



Rotational rubbing of thumb clasped into palm



Rotational rubbing of clasped fingers into palm

Foam Dispensing Systems

Touch-free or manual dispensers automatically deliver the correct amount of hand soap. Lockable with large sight window for easy refill check.

Surface Disinfectants & Sanitizers Information

These products reduce germs on hard, nonporous surfaces to keep germs from spreading. Clean surfaces with cleaners that remove dirt and other impurities before using disinfectants or sanitizers. Disinfectants are antimicrobial chemicals that destroy or eliminate most pathogens and disease-causing microorganisms on cleaned surfaces, lowering the risk of spreading infection. Sanitizers are antimicrobial chemicals that reduce germs on a cleaned surface, but may not completely destroy or eliminate all bacteria or viruses. **National Sanitation Foundation (NSF) International** manages a voluntary registration program for nonfood compounds and proprietary substances that provides specific ratings to help Food Processing operations understand where certain products should and should not be used.

NSF RATINGS, CATEGORIES, AND INTENDED USE

3D: Food Processing - Substances for Washing Fruits and Vegetables

B1: Laundry (Food Contact) - Products for Fabrics that May Come into Contact with Food Products

B2: Laundry (Nonfood Contact) - Products for Fabrics that Do Not Come in Direct Contact with Food Products

C1: Nonprocessing Area - General Products

C2: Nonprocessing Area - Compounds for Use in Toilets/Dressing Rooms

D1: Antimicrobial - Antimicrobial Agents Always Requiring a Rinse

D2: Antimicrobial - Antimicrobial Agents Not Always Requiring a Rinse

G4: Water Treatment - Chlorine Products

K1: Solvent Cleaners - Cleaning/Degreasing Solvents for Use in Nonprocessing Areas

Q4: Shell Egg Products - Chlorine Sanitizers

Bleach

Liquid bleach is commonly used to deodorize and disinfect hard, nonporous surfaces to eliminate germs, mold, odors, and a broad range of pathogens, including bacteria, fungi, and viruses. The surfaces should be cleaned with soaps or detergents before applying bleach. Diluted bleach can also be used to whiten and brighten fabrics during laundering. Germicidal bleach is more concentrated than standard bleach, so less product is needed to create a solution for disinfecting surfaces.

Disinfecting Wipes

- All are EPA registered

Disinfecting wipes are ready to use and presaturated with a disinfectant that helps stop the spread of bacteria, fungi, and viruses. Clean surfaces first, then use wipes to reduce the risk of spreading infection. They offer a convenient alternative to using multiple items, such as rags, buckets, and spray bottles.

Food-Processing Industry Sanitizers

- All are EPA registered

Sanitizers are antimicrobial chemicals that significantly reduce the amount of germs (up to 99.999%, including fast-spreadng cold and flu viruses) on a surface, but may not completely destroy or eliminate all bacteria or viruses. Surfaces require precleaning with soap or detergents before sanitizing for optimum results. These sanitizers are commonly used in restaurants, food service, and food and beverage manufacturing.

Degreaser Information

BASE FORMULA DEFINITIONS

Water-Based
These degreasers use water as their primary solvent, plus detergents, emulsifiers, cleaning agents, surfactants, and other compounds, to dissolve soil or make contaminants more dissolvent in water.

Solvent-Based
Chemical-based degreasers use chemicals to remove petroleum, grease, dirt, and fatty oils.

Natural Solvent-Based
Natural degreasers use organic sources for their base including citrus, soybean oil, coconut oil, and ethyl lactate (renewable carbohydrates). Scents are lighter and fresher than solvent-based cleaners.

General Purpose Water-Based Degreasers

General purpose degreasers use water as the primary solvent to break down and lift off deposits of grease, oils, and dirt. They are biodegradable and commonly used to clean parts, machinery, and electrical components. Cleaner form is liquid for all degreasers, except 44F776 is a foam-dispensing gun cleaner that includes a spray adapter.

Strong-Acting Solvent-Based Degreasers

Strong-acting industrial degreasers are more effective than general-purpose degreasers at cutting through the toughest petroleum greases and fatty oils. Solvent-based degreasers use natural (citrus, soy, or pine oil) or chemical-based solvents to break down and dissolve grease, oils, ink, grime, and adhesives. Degreasers clean and remove contaminants from tools, parts, and machinery.

Food-Processing Industry Degreasers

Degreasers are NSF Certified. They break down and remove grease, oils, and dirt without harmful contamination or hazardous disposal. These solutions clean cooking surfaces, machinery, drain lines, and grease pits in restaurants, food service, and food and beverage manufacturing sites. Cleaner form is liquid for all degreasers, except 2CXU9 is powder packets.

Electrical Contact Cleaners Information

Plastic Compatibility

Safe on All Plastics indicates safe for use on plastic housings without damage.

Safe on Most Plastics designates safe on most plastic housings without cracking or damage. Testing cleaner for compatibility before use is recommended.

Dielectric Strength Range

Dielectric strength is the maximum voltage an insulator can withstand before breaking down and allowing electric current through if contacts are energized before cleaner evaporates. The higher the dielectric strength level, the greater the insulation against sparks, current breakthrough, or electrical shorts. When power can't be disconnected, look for cleaners with the highest dielectric strengths.

National Sanitation Foundation (NSF) International manages a voluntary registration program for nonfood compounds and proprietary substances that provides specific ratings to help food processing operations understand where certain products should and should not be used.

Electrical Contact Cleaners

- Ready to use liquid

Contact cleaners remove dust, dirt, oil, flux residue, and other contaminants from sensitive electronics and electrical components without excessive scrubbing or wiping. These fast-drying cleaners improve conductivity by removing contaminants from the energized surfaces of electronic components, devices, and equipment.

Plastic-safe contact cleaners eliminate any incompatibility with plastic components or rubber gaskets that house or surround sensitive electronics or electrical components. These precision electrical contact cleaners remove dust, dirt, oil, and other contaminants without damaging plastic, rubber, or conductive surfaces. Safe for most plastics. Test for compatibility before use.

Aerosol Dusters

- Aerosol can
- Ready to use liquid

These compressed air cans shoot a powerful stream of air to remove surface contaminants including dust, dirt, and debris from sensitive equipment including computer keyboards, test instruments, circuit boards, and machinery. Air is nonabrasive and evaporates quickly without leaving any residue.

Freeze Sprays

- Safe on all plastics
- Nonflammable
- 0% VOC content
- Trigger spray can
- Ready to use liquid

Sprays are aerosol coolants that emit icy cold air to instantly dissipate heat and cool circuits. Freezing components helps locate thermal intermittent failures and shorts in computers, electronics, data processing equipment, and testing equipment. Nonabrasive freeze sprays evaporate instantly without any residue.

Toilet & Urinal Cleaners

Cleaners keep bathrooms clean and odor free. They break down stains, urine, rust, limescale, and mineral deposits to keep the water in toilet bowls and urinals clear. They also disinfect and deodorize surfaces to eliminate odors and prevent bacteria growth. Cleaners with thickeners cling to surfaces as they break up and penetrate soils.

Drain Cleaners, Maintainers and Openers

Ready-to-use, bio-enzymatic products break down organic matter in drain lines. They produce bacteria to actively digest and liquefy organic matter in drains to help prevent and eliminate clogs and odors. Regular use of bio-enzymatic formulas can help prevent future clogs by eliminating buildup. Recommended for use in commercial and institutional food service operations, where buildup from fats, oils, and grease is common.

Odor Eliminator Machines

Odor machines dispense air fresheners into the air to eliminate foul smells. 33NY31 is a portable machine that treats odors originating from hard surfaces. Commonly used in large, commercial spaces such as hotel rooms, dormitories, and hospital rooms. 33NY30 is a stationary machine used to remove odors in dumpster rooms, compactor rooms, and loading docks. Find compatible Freshwave IAQ odor-eliminating liquids in the ad above.

Odor Control Information

NON-PARA CAKES/BLOCKS

Non-para or water-activated deodorizers include enzymes that break apart and dissolve with use and won't clog drains.

PARA CAKES/BLOCKS

Air-activated deodorizers are unaffected by water and melt slowly. Para blocks or rim hangers contain a chemical that's restricted for use in some states.

36WE50

489M94

55FJ83

2ZXE5

Urinal Screens

- Non-Para

Sit on urinal drains to eliminate unwanted odors in public and commercial restrooms. Urinal screens deodorize with a fresh scent and filter debris to prevent clogged drains.

Urinal Cakes & Toilet Tank Blocks

- Round shape

Urinal cakes sit at or near the drain of a urinal to maintain odor control in public and commercial restrooms. They absorb odors and leave a fresh fragrance with every flush to counteract odors.

Toilet tank blocks drop inside toilet tanks to control or eliminate odors at their source, especially in public and workplace restrooms. They are biodegradable and contain beneficial bacteria that release enzymes to help break down organic materials.

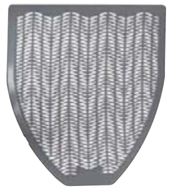
Toilet & Urinal Mats

Toilet Mat
2LHK1



Urinal Mat
2LHJ9

Sized to fit and placed near urinals and around toilets to absorb drips and splashes. Mats protect restroom floors from stains, absorb odors to keep restroom smelling fresh, and keep liquids from pooling around fixtures to help prevent slips and falls. They hold up through daily cleaning and foot traffic.

Dish Soap

Liquid dish detergent helps remove grease and food residue from dishes, pots, and pans in handwashing applications.

Pots and pans cleaners are specially formulated to remove tough grease and oil. Cleaners generate long-lasting suds to help reduce sink turnover. 33NT91 is a pretreat for your pots and pans, just spray and wipe.

Foam scrubbers break up dirt from surfaces to remove tough dirt and grime, including buildup and stains.

Laundry Detergents

- Phosphate free

Detergents for high-efficiency (HE) machines are specially formulated to clean clothing and fabrics in energy-saving front- or top-load washing machines that use less water. They also work with traditional washing machines.

Detergents for traditional machines remove tough, ground-in dirt and stains from clothing and linens. Traditional washing machines use more detergent and water than HE machines to clean.

61KK32 includes fabric softener. 24L304 and 24L305 contain bleach.

Fabric Softeners

Soften fibers, reduce wrinkles, and reduce static.

Liquids are absorbed by the fibers during the laundry rinse cycle, keeping fibers smooth and strong as they withstand spinning, tumbling, and heat.

Sheets, or dryer sheets, keep fabrics soft, fragrant, wrinkle-free, and reduce static cling. Sheets are added to the dryer with wet laundry and are activated by heat and moisture.

Balls help soften laundry and prevent wrinkles while drying without the use of chemicals found in fabric softener liquids and sheets. Reusable and often recommended for sensitive skin.

Carpet and Upholstery Cleaners

- 1 gal jugs

Shampoos work with rotary cleaning methods to remove spills, spots, and stains from carpet, area rugs, and upholstery. They loosen carpet fibers, when combined with water, to remove deeply embedded soils with no tacky residue.

Presprays loosen dirt and stains in heavily soiled carpets prior to shampooing or extraction cleaning. They contain oil repellents to help fabrics and carpets resist resoiling.

Odor eliminator additive removes odors from carpeting and upholstery. Penetrates fibers to eliminate unpleasant smells including cigarette smoke, perspiration, and mildew.

Note: Find Carpet Cleaners for Extraction Machines on page 1577.

Graffiti Removers

Ready-to-use removers effectively clean up paint, permanent marker, ink, crayon, and adhesive from multiple hard surfaces. 6KHD7 and 6UAX9 are aerosols with a thick gelled formula that clings to vertical surfaces. Wipes are premoistened and offer an efficient alternative to using multiple items, such as rags, buckets, and spray bottles.

Mold & Mildew Removers

Removers seep into porous surfaces to remove embedded fungal spores and prevent future damage by inhibiting growth and stopping airborne spore transmission.

Mold Control Fogger Machine

This electric machine uses liquid oil- or water-based mold control products to saturate the air in enclosed spaces or small rooms to kill airborne and surface-based mold spores. It dispenses a fog that coats surfaces including walls and ceilings to kill mold spores and prevent future growth.

Mold control chemicals work with the fogger to eliminate and prevent mold and mildew. No rinse required, nonflammable, and plastic safe. VOC content is 0%. Ready to use.

J-Fill Dilution Control Systems

These systems dispense accurate cleaning solutions with no measuring, mixing or mess, and no tampering. No metering tip installation—bottles come pre-tipped. Numbered and color-coded labels are visible through product windows for easy product identification. System dispenses cleaners with a push of a button or a squeeze of a trigger on 46E798. **Dilution control chemicals** come in a Pkg. of 2.

RTD Dilution Control System

WATER HOSE AND QUICK CONNECT KIT

Attach and detach bottles from water supply. Hookup kit includes 5-ft. water hose, shutoff valve, and female quick-connect.

DILUTION CONTROL CHEMICALS

Maintenance-free dilution control system is built right into the bottle. Units easily attach to a common garden hose for water supply. Provide safe, accurate mixing; eliminate contact with concentrated chemicals and reduce chemical waste.

RTD—Set flow lever to fill buckets or bottles.

RTD Spray—Have an adjustable fan spray with high and low settings, ergonomic trigger for one-handed operation, and a hanging bracket.

DILUTION CONTROL ACCESSORIES

For use with all RTD bottles.

Quick Connect—Female attachment connects RTD bottles and water source.

Wall-Mounted Holster—Holds two 1.5L or 5L bottles.

Water Supply Hose—5-ft. hose allows greater flexibility; can easily move from one water source to another.

Wire Baskets—Wall-mountable baskets provide more-permanent installation and allow hands-free operation.

3M Glass Cleaner Preprinted 1 L Bottle with Sprayer 2AV87

3M

Twist 'N Fill Dilution Control System

DISPENSER

Features a pressure-relief fitting that dilutes chemical concentrates with water to accurately and safely dispense cleaning products. Air gap prevents chemical backflow into water supply.

WIRE SHELF

Provides neat storage and easy accessibility of chemicals.

DILUTION CONTROL CHEMICALS

Choose a concentrate, insert the bottle into the dispenser, twist, and fill bottles and buckets with the appropriate solution strength for cleaning.

PREPRINTED BOTTLES

Dispense mixed cleaning chemicals into labeled white bottles and sprayers. Pkg. of 12.

Flow Control Dilution Control Systems

Dispensers minimize worker interaction with chemicals by delivering accurately diluted cleaning solutions directly into containers.

Portable Water Hose and Quick Connect Kit—Reusable, movable kit brings highly accurate dilutions to on-the-go convenience.

Wall-Mount Dispenser—Uses simple two-dial dispensing, and includes a three-point locking system to limit chemical exposure and help prevent theft. Small cabinet size fits compact spaces.

Dilution Control Chemicals—Feature numbered and color-coded labels for easy identification.

pH Value Information

Neutral falls between 5 and 9 on the pH scale. These daily cleaners remove light soil or small particles from surfaces.

Alkaline falls between 9 and 14 on the pH scale. General purpose cleaners (9-11 pH) remove oils, particulates, fats, and proteins. Heavy-duty degreasers (13-14 pH) remove heavy grease and oil.

Acidic falls between 0 and 5 on the pH scale. These cleaners remove soils caused by mineral deposits and organic matter including hard water marks, rust stains, soap scum, lime, grease, and proteins.

Multi-Surface Floor Cleaners & Maintainers

Floor cleaners remove everyday dirt, grime, and scuff marks.

Floor maintainers extend the life of floors between finishes without dulling the gloss. They repair or fill in microscopic scratches and scuffs and eliminate the need for frequent stripping and refinishing of floor surfaces.

Floor Finishes and Sealers

All finishes and sealers (except 48TH96) have a high gloss finish type.

Finishes protect and restore floors with a scuff-resistant coating. They cover sealed floor surfaces and are designed for use with high-speed buffing and burnishing machines.

Sealers provide the base coat for floor finishes. They fill uneven and porous surfaces and create a semi-permanent layer with high chemical resistance.

Combination floor finishes and sealers work in one convenient step. Combine a sealing layer with a protective finish coat to save time and money.

Floor Strippers

Concentrated liquid strippers dissolve and remove buildup caused by multiple layers of floor finishes and sealers. Buildup may cause discoloring over time, and any dirt and dust embedded in the floor coatings become harder to remove with mopping alone.

Bottles with Trigger Sprayer

Spray bottles with trigger sprayers apply cleaners, degreasers, disinfectants, and other liquids in offices, restaurants, and health care facilities. These empty bottles are typically filled from bulk containers and used for small jobs, such as cleaning glass or countertops.

Dual spray bottles allow you to use all the product in the containers and reduce hand fatigue by providing a continual spray at every angle, including upside down.

Cleaning Supplies Holders

Carry Tote—Holds and transports quart bottles and other small cleaning items. Durable plastic construction with hand grip.

34 in Organizer/Tool Holder—Features 3 S-hooks, 2 double hooks, 1 message clip, and 1 carry sling for electrical cord.

28 in Organizer/Tool Holder—Offers 6 holders with rubber grips for tools or handles.

Rim Caddy—BRUTE® rim caddy snaps securely onto the rim of BRUTE 44-gal. trash cans and features storage compartments and hooks, plus smooth surfaces for easy cleaning.

Caddy Bag—The BRUTE® trash can caddy bag fits 32- or 44-gal. BRUTE containers. Large elastic pockets are designed to hold cans, bottles, tools, cleaning utensils, and other accessories. Adjustable buckles.

Vented Dispensing Container—Extended faucet helps fill bottles and other containers without spilling. Molded graduations.

Dispensing Rack and Wire Basket—Rack organizes liquids and snaps together without nuts, bolts, or screws. Stores up to 20 gal. of liquid plus supplies. Has 11" extension legs to easily accept 5-gal. dispensing containers. Wire basket, sold separately, conveniently stores spray bottles on plastic shelving.

General Purpose Cart 5M880

HYGEN Microfiber Cart with Charging Bucket 6JHV1

High-Security Microfiber Cart 1PBJ9

Janitorial Cleaning Carts

- Swivel casters are nonmarking

GENERAL PURPOSE CARTS

Space-saving carts accommodate common cleaning items and waste collection.

HYGEN MICROFIBER MOPPING KIT WITH CHARGING BUCKET

Designed to help reduce cross-contamination when damp mopping in healthcare environments, and help improve dry time. Cleans up to 5000 sq. ft. Bucket is fully-loaded with microfiber pads.

HIGH-CAPACITY MODULAR

Provide 40% more storage than standard janitor carts, in the same footprint, with 30% larger, leak-proof, zippered, side-opening waste bags. Accommodate 32- to 55-gal. BRUTE containers. Securely hold WaveBrake Dual water mopping combos or microfiber mop bucket dollies. Include 2 bottle caddies and 5 rubber tool grip handle holders. Can be used with Microfiber Disinfecting Bucket 5NY73, sold separately on page 1534.

High-Security Microfiber, 1PBJ9

Locking doors and security hood open on both sides for quick, easy access. Includes waste cover.

JanSan Microfiber, 1PBJ8

Features 4 removable, color-coded pails, 4 nonmarking 4" swivel casters, and a folding front platform. Includes two 30-qt. storage bins and mop bucket attachment.

JanSan Microfiber, 1PBJ7 and JanSan 1PBJ6

Include folding front platform and mop bucket attachment.

Safety Cone 2LEC6

Safety Cone—Collapsible 3UU66

Barricade System with Belts 2LEC8

Door Barricade Sign 2LEB6

Safety Cones, Systems, and Barricade Signs

All cones have a yellow background, except 6VKP6 is orange. Legend text is black for all cones and signs.

Safety Cones—Stack standard cones to reduce storage space. Collapsible cones compress and store in a tube mounted to the wall.

Safety Cone Systems—6VKT0 includes (2) 20 ft yellow plastic chains, (2) signs, (3) red flashing lights, (4) message labels, and (5) yellow cones. 2LEC8 includes (1) cone, (1) 20 lb weight ring, and (1) nylon barricade belt. 2 units are required to make complete system.

Accessories—2LED3 helps stabilize 36 in safety cones. Flashing Light requires one D battery, not included. 2LED2 snaps into the top of 36 in cones to hold standard rigid signs. 6VKT2 is injection-molded polypropylene for high-traffic indoor areas. 6GJA1 adhesive-mount, plastic labels are compatible with safety cones. Sign legends are: Slippery Wet Floor Please Walk To The Right, Slippery, Wet Floor Please Walk To The Left, Watch Your Step. Have as yellow background with black and red legend text.

Door Barricade Signs—2LEB6 telescopes 42 in to 72 in, and 6GJA0 telescopes 30 in to 44 in to close off areas to foot traffic. Double-locking design with adjustable torsion lock and rubber ends grip the door frame or wall.

A-Frame Plastic Floor Safety Signs

Portable signs fold flat for easy storage. Not retroreflective.

See-All Industries signs are waterproof and have a write on surface.

Rubbermaid and **See-All** signs are ANSI, OSHA, and 29 CFR 1910.145 Compliant.

Middle Support Signs—Offer extra stability.

Reversible Signs—Fold signs inside out and lock bottom tabs together to display message that is on the reverse side.

Blank Signs and Die Cut Lettering Kit—Create custom message with blank signs and die cut sheet of letters and numbers. 3YTV5 includes (3) each of A, E, I, O; (2) each of L, N, R, S, T, U; (1) each of the remaining alphabet and numbers 1 to 9; and basic punctuation characters.

Institutional Mop Bucket and Wringer Combo

Designed for use in correctional and institutional applications—virtually all-plastic, metal-free design reduces the ability for making weapons. Features quiet-rolling 3" nonmarking casters. Wave baffles result in less splashing while mopping and maneuvering. Molded-in handles, sink ledge and a pour spout provide control to ensure a safe and stable emptying process.

Tandem 1-Piece Bucket/Wringer Combo 2FTP8

Color coded combo E4108 helps keep different types of cleaner separated

Mop Bucket/Wringer Combos

TANDEM

All-in-one compact design with integrated bucket and wringer provides effective wringing and no lost parts. 31-qt. bucket has a down pressure wringer and accepts up to 24-oz. mops.

NEW GENERATION WAVEBRAKE BUCKET/WRINGER COMBOS

Patented mop bucket system helps prevent workplace hazards associated with spills and splashes. Color-coding on Bucket/Wringer Combos helps reduce cross-contamination. Organize by function, department, or building area. WaveBrake baffles reduce splashing while mopping and maneuvering for a safer environment. Molded-in pour spout and sink ledge help direct water while emptying the mop bucket. Improved wringer design works with more mop sizes, extra small to extra large (12- to 32-oz.). Built-in steel handle provides a secure grip to lift and carry the bucket. Red handle at back of mop bucket helps lift, carry, and empty the bucket. Structural web-molded plastic construction. 493G96 includes a foot-operated drain in front of bucket to empty into floor drains.

NEW GENERATION WAVEBRAKE BUILD YOUR OWN BUCKET COMPONENTS

Individual components and colors are available to build a cleaning system that meets your specific needs.

Note: New Generation WaveBrake wringers, replacement buckets, and dirty water buckets will not fit on pre-September 2018 mop buckets.

String Wet Mop Heads

- 4-ply
- Looped-end
- Stitched tailband
- Multiple colors help avoid cross contamination
- Wet mop handles sold separately on page 1532
- Launderable unless otherwise noted

Cotton/Rayon/Synthetic Blend—Durable mop heads have open-end spun yarn. Resist unravelling, fraying, and linting. Tailband prevents tangling and improves floor coverage.

Cotton/Synthetic Blend—Mop heads are highly absorbent. Looped-end design increases floor coverage and reduces streaks.

Cotton—Cotton material is more absorbent than other cotton/synthetic blends.

Antimicrobial—Mop heads feature antimicrobial yarn treated with a silver-based agent.

Rayon/Polyester—Contain a minimum of 50% post-consumer recycled content.

Finish Wet Mop Heads

- Size is dry weight

Looped-End Nylon—Even application without excessive linting or fraying. Higher liquid release offers more coverage and less chemical waste.

Looped-End Rayon—Economical alternative to nylon. Releases liquid evenly for a smooth, clean finish.

Cut-End Polyester—Economical 4-ply mops have excellent absorbency and release characteristics; ideal for applying floor finishes and disinfectants.

Cut-End Polyester, Screw-On Style—Provide easy mop head changes and have excellent liquid release properties; ideal for economical floor finishing, disinfecting, and general-purpose cleaning. Noncorrosive screw and header allows mops to lay flat for easy cleaning under furniture and cabinets. Use handle 1TZA6, sold separately on page 1532.

Rubbermaid Commercial Products

Finish Wet Mop Heads

Looped-End Nylon—Nonlinting, continuous filament yarn leaves a glossy long-lasting finish. GlossPro Flat Finish mop applies finish to 30% more floor area.

Web Foot Looped-End Rayon—4-ply, looped-end synthetic yarn is designed for a controlled release of floor finish. Tailband is sewn on the inside of mop to help reduce the "drag" patterns common to most finish mops.

3M Easy Scrub Mopping Systems

EASY SCRUB FLAT MOP SYSTEM

- Mop handle holds 15 oz. of solution
- 54" standard handle

Push-button and squeeze bottle systems provide liquid on-demand. Common applications include patient rooms, classrooms, stairwells, restrooms, and spot mopping.

Buddy Jug—2½ gal. dispensing container. Safe with general disinfectant cleaners with pH from 7 to 10.

EASY SCRUB EXPRESS FLAT MOP SYSTEM

- 38" to 59½" aluminum handle

Quickly and easily change out chemicals. Swivel head.

Express Mop Tool and Starter Kit—1EKB2 includes an aluminum telescopic handle/pole and 16" mop pad holder. Simple press of a button dispenses cleaning solution. 30XJ20 includes flat mop tool, 12 (11 oz.) bottles, caddy, two 18" flat microfiber mops, ½ gal. pour jug, three blank sheets, and label CD.

Express Bottles—Squeezable bottles hold 11½ oz. of cleaning solution and fit in mop handle.

Express Bottle Caddy—Portable, holds up to twelve 11½ oz. Express bottles (1EKB4).

MICROFIBER FLAT MOPS

Clean and remove stuck on dirt and debris. Polypropylene scrub stripes are intertwined with absorbent microfibers. Washable. Color-coded borders help reduce cross-contamination. Red for restroom floors. Blue for operating and emergency rooms. Green for kitchen floors. White for general floors and dining floors in facilities, or patient rooms and public areas in healthcare facilities. Use 1CPH4 for textured surfaces such as ceramic tile, quarry tile, natural stone, etc.

Microfiber Dust Mops

Microfiber mops collect more dust, dirt, and moisture than traditional mops.

ECHO CUT-END

Use on hard-surface floors. 90% recycled content—30% post-consumer, 60% post-industrial. Heat-set yarns will not unravel as quickly as other yarns. Launderable and fast-drying.

LOOPED-END

Hold more than ordinary microfiber mops. Kits include 3 pads and an adapter for use with regular dust mop frames (sold separately, see page 1537).

5NY74

5NY73

Microfiber Mop Bucket Systems

7-gal buckets hold microfiber mops up to 18" long and fit onto Rubbermaid Janitorial Carts on page 1526.

Press Wringer Buckets—Washboard-style sieve strainer helps remove debris from the mop before down press wringing. Buckets hold multiple microfiber mop pads (available on this page) and have 3" nonmarking casters. 5NY74 allows storage of unused floor finish with an airtight lid. 5NY75 has a twist-valve floor drain for fast emptying.

Charging Bucket—Disinfecting bucket designed especially for healthcare cleaning has a watertight, latch-on lid. Holds 15 to 20 microfiber wet pads.

Charging Bucket With Sieve—Effectively and ergonomically moistens mops. Reduces cross-transmission when a finish mop is used for each room. Snap on lid and floor drain for fast emptying.

Microfiber Cloths

- **Launderable and reusable**

Small fibers trap dirt and moisture, cleaning surfaces without leaving a sticky residue or spreading dirt. Microfiber cloths are more absorbent than standard cotton cloths and don't require cleaners or chemicals. Use for general-purpose cleaning, tough jobs, and delicate surfaces. Leave no residual lint, streaks, or scratches. HYGEN medium-duty cloths, 3CCZ4 and 3CCZ3, withstand up to 500 launderings and up to 200 with bleach. Patented zig-zag scrubbers make cleanup quick and easy.

Fine-Sweeping Floor Brooms

Brush, handle and brace combo removes even fine dirt and dust. Ideal for highly polished or waxed floors. Two threaded handle holes on either side of block allow use of alternating sides for even wear. Angle brace adds support and stability.

Bristle Material	Block Material	Block Size	Bristle Color	Trim L	Item No.
Polyethylene	Wood	36 in	Gray	3 in	498Z08

3-in-1 Floor Broom

Combine the best features of fine, medium, and heavy floor brooms in one product. Synthetic bristles have pitched angle for sweeping on all types of floor surfaces. Shorter, heavy bristles in front sweep heavy debris, and longer, fine/medium bristles in back sweep away fine dust and particles. For use with threaded handles.

Contractor Brooms

Synthetic fibers provide extra strength and durability. Can be used in wet and dry applications and with detergent and water. Acid- and fungus-resistant fibers last longer than traditional brooms. For use with contractor bolt-on handle 4GU69, see page 1541.

Silver and Black/Gray Polypropylene Bristles—For sweeping up fine dust and dirt on smooth surfaces.

Black/Gray Flagged Synthetic Bristles—For picking up heavy dirt and the fine dirt left behind. Includes a heavy-duty, wide-leg brace.

Maroon Polypropylene Bristles—For sweeping up heavy dirt and debris on very rough surfaces.

Blue Polypropylene Bristles—Stiff bristles are able to sweep heavily caked dirt and debris on very rough surfaces.

Black/Brown Palmyra Bristles—For sweeping heavy debris. Broom comes with a heavy-duty brace.

Floor Sweeping Compounds

Compounds are sprinkled on floors to combat everyday dirt. These compounds keep dust and dirt confined to floor areas during cleanup, diminishing the spread and inhalation of dust. Gritted sweeping compounds act as an abrasive, helping to loosen grime and dirt stuck to floors while sweeping floors at construction sites, warehouses, or garages. Gritless sweeping compounds do not include abrasives and will not scratch or mark finished floors in schools, museums, and gyms.

Color-Coded Brushes

Promote safe food handling practices and help minimize the risk of cross-contamination between work zones using color-coded brushes.

UTILITY SCRUB

General-purpose, with a white plastic block and 1⅝" poly-ester fill.

HAND SCRUB

Ergonomic design with curved back and flared, crimped bristles to hold solutions and clean along edges and corners. Contoured plastic blocks are 2½"W. Fill is 1⅜".

BENCH

Remove powder and other residues. Polyester fill is 2½".

PIPE HOOK

Circular clean-in-place brushes are ideal for cleaning curved drains, tubes, pipes, and equipment. Polyester bristles are twisted into galvanized steel wire.

WAND

Radiator-style brushes feature a long, narrow shape to clean coun-tertops, refrigerator coils, conveyor belts, and other hard-to-reach spots. Slip-resistant, durable plastic handle will not crack or splinter.

BOTTLE AND GALLON

Wirewound brushes feature smaller diameter handles and softer bristles for cleaning containers with smaller openings.

MULTIPURPOSE VALVE AND FITTING

Medium stiff bristles provide aggressive cleaning, and rounded heads and ends protect against scratching.

Color-Coded Squeegees, Floor Brushes, and Cleaning Supplies

Protect against microbial cross-contamination by assigning specific colors to each potential area of contamination.

Color-coded supplies allow certain colors for specific cleaning purposes. This system is easy to understand and prevents cross-contami-nation for better sanitation.

SQUEEGEES

Hygiene—1-pc. design inhibits growth of bacteria by eliminating openings for dirt to accumulate. Soft ther-moplastic elastomer blade contours easily to uneven surfaces. Frame is designed to help prevent fluids from splashing over squeegee frame. 12" squeegee includes a 6½" handle.

Foam—For cleaning liquid spills from floor surfaces. Double foam rubber blades conform to most surfaces, including tile and marble. Durable plastic frames will not rust or spark.

FLOOR SCRUB BRUSHES

Dual-angle plastic block and crimped polypropylene filament hold liquid for scrub-bing at high and low angles. Threaded handle hole; order handle separately on page 1541. 1¾" trim length. Overall length: 10".

ANGLE BROOMS

Designed for extended use; ergonomic shape prevents uneven wear. 1"-dia., fiberglass handle. Sanitary, unflagged polypropylene bristles. Self-locking Flex-Tip. 12" sweep face; 5½" to 7" trim length. Overall length: 54".

FLOOR SWEEPS

Hygienic, nonabsorbent plastic block with angled synthetic bristles. Short, heavy-duty bristles up front help sweep heavier debris. Long, fine bristles in back sweep fine dust and can be used with sweeping compound. 2⅓" trim length. Block size: 24".

HANDLES

1"-dia. handles for use with a variety of bench and floor squeegees and brushes. Short 6½" polypropylene handles feature ACME threads and are ideal for use with bench squeegees and brushes. 60"L fiberglass handles are self-locking.

Food Service Brushes

Bottle—Short-handle brushes are used to scrub the sides and bottoms of tubes, jars, bottles, and glasses. They have a cylindrical head and a small-diameter handle to clean containers with small openings.

Oven and Grill—Wire bushes and metal scrapers quickly and easily remove heavy carbon deposits, rust, and burnt-on food buildup.

Note: Equipment must be turned off prior to brush use.

Grill Cleaning System—Specifically designed to clean hot surfaces without clogging. No. 2NTJ7 must be used with grill pad and holder. No. 2NTJ6 cleans without scratching or lifting surface cure.

Coffee Maker—Compact brush cleans all coffee decanters, pots, urns, and dispensers. Semi-circular wire wound brush contours to the inside of the container.

Scouring Pads and Scrubbing Sponges

TOUGH GUY

SCOURING PADS

Nonabrasive—Cleans without scratching.

Medium-Abrasive—For most daily cleaning jobs.

Blue—Abrasive, open-weave pad cleans baked-on surfaces and crusted build-up on equipment.

Green—Flexible, heavy-duty abrasive pad.

White and Yellow—Yellow cellulose sponge backed with white, lightly abrasive scouring pad.

Green and Yellow—Yellow cellulose sponge backed with medium-abrasive green scouring pad. Premoistened and individually wrapped.

Blue and Yellow—Contour-cut sponge backed with blue antimicrobial scratchless scouring pad.

Antimicrobial—Green pad with antimicrobial treatment.

PADS

Nylon Soap—2 scrubbing surfaces and a foam center filled with concentrated liquid detergent.

Steel Wool—Steel wool is fully saturated with high-sudsing cleaning formula.

SCRUBBERS

Brass—Soft brass wire for use where scratching is an issue.

Stainless Steel—Wideband construction for full-coverage cleaning.

Plastic Mesh—Durable high-strength filament with overlap construction. For sensitive surfaces.

MICROFIBER SCRUBBERS

Blue—Sponge covered with microfiber for lint- and streak-free cleaning.

Scouring Pads and Scrubbing Sponges

Scotch-Brite

SCOURING PADS

Cleansing 98—For sensitive surfaces such as stainless steel, chrome, porcelain, and ceramic.

General Purpose 96—Synthetic scouring pad.

General Purpose Green 9650—Thicker hand-size version of scouring pad 96 eliminates cutting or folding of pad for a better grip.

Heavy-Duty 86—For heavily baked-on foods.

Pot 'n Pan 88—Synthetic material won't splinter or rust.

Power Pad 2000—Scours 2 to 4 times faster with 2 to 8 times less scratching than conventional scouring pads. Ideal for stainless steel.

Cleaning Pad 9000—Cleans most types of surfaces, including porcelain and nonstick cookware, without scratching.

Purple Scour Pad 2020—Fast scouring and low scratching.

Scour Pad 220—Heavy-duty, tough cleaning.

Multipurpose 622—For no-scratch scouring.

Dobie All Purpose Pad 720—Hand-size, no-scratch pad constructed of mesh-wrapped urethane sponge.

Grill Scrubber 7721—Mineral-coated to remove burnt-on food and grease.

Natural Fiber—Made from 50% plant-based materials. One sponge does the work of 30 paper towels.

SCRUBBING SPONGES

Power Sponge 3000—Power Pad 2000 is combined with an antimicrobial sponge.

Scrub Sponge 74—Features 96 pad on one side for medium-abrasive scrubbing.

Scrub Sponge 63—Light-duty cleaning without scratching.

Sponge Cloth—Offers the absorbency of a sponge with the coverage of a wipe.

Copper-Coated—Long-lasting copper edges cut through tough soil.

Stainless Steel—Removes baked-on food from cooking equipment.

Trash Can Dollies

Use to mount, secure, and keep cans in good working order. Wheeled trash can dollies provide a secure base for trash cans and transport cans around a facility without dragging or lifting. Anchor dollies secure to the ground to prevent cans from tipping.

Half-Round Plastic Trash Cans

TOUGH GUY

Place against a wall to save floor space in hallways, break rooms, and other places where space is limited. Plastic resists dents and won't rust or chip. An open top makes it easy to add trash and change trash bags. D2127 cans include rigid plastic liner. 4PGR5 dome push door top is made to fit these trash cans.

Trash Bags for Wood, Metal, Concrete

- Super Hexene HAO

For heavy-duty and industrial applications that require maximum strength and resistance to punctures and tearing. They are often used by contractors on construction sites, in lumber yards, and in brickwork applications to hold heavy or sharp waste.

Pest-and Rodent-Repellent Trash Bags

Bags have natural mint fragrance added to repel rats, raccoons, and other rodents while remaining safe for humans. HDPE bags are lightweight and moisture-resistant for collecting soft refuse such as paper towels, paper, and linen. LLDPE bags are tear- and puncture-resistant for collecting heavy refuse and items with sharp corners, such as cardboard in kitchens.

Hospital Isolation Bags

- Coreless rolls

Bags with legends are printed in English and Spanish to identify contents: Infectious Waste (red) and Infectious Linen (yellow). Bags without a legend are for Noncontagious Linen (blue and green). Color-coded to manage disposal. HDPE bags are lightweight and moisture-resistant for collecting soft refuse such as paper towels, paper, and linen. LLDPE bags are tear- and puncture-resistant for collecting heavy refuse and items with sharp corners, such as glass, plastic, and cardboard.

General Purpose Corded Shop Vacuums

- Wet/Dry pickup

Roll shop vacuums to a cleanup site and plug into a nearby electrical outlet to vacuum up liquid spills or dirt and debris. They're ready for use without having to wait for a battery pack to recharge. Standard vacuums filter the outgoing air through the vacuum bag. Search General Purpose Corded Shop Vacuums on Grainger.com for a complete list of vacuum contents.

Portable Corded Shop Vacuums

- Wet/Dry pickup

Vacuums are lightweight, compact units that can be carried around the jobsite to clean up liquid spills or dirt and debris. They plug into a nearby electric outlet, so they're ready to use. These vacuums take up less storage space than a full-size shop vacuum. All vacuums include efficient, single-stage bypass motors for powerful pick-up.

Portable Cordless Shop Vacuums

Shop vacuums allow the cleanup of wet or dry spills while eliminating the trip hazard of a cord and the need to work near an electrical outlet. They're powered by rechargeable batteries to allow use in remote areas where electric power is unavailable. These vacuums are lightweight for transport and compact to save space in storage.

Commercial Cleaning Corded Shop Vacuums

- Wet/Dry pickup

Commercial vacuums have a single-stage or 2-stage motor that allows more frequent use than general purpose shop vacuums. They are used for cleaning up liquid spills or dirt and debris and are commonly paired with attachments suited for professional office, school, or retail cleaning applications. Standard vacuums filter the outgoing air through the vacuum bag.

Industrial Corded Shop Vacuums

Industrial vacuums provide greater suction than general purpose or commercial-cleaning shop vacuums to pick up heavier particles and liquids. Their 2-stage or 3-stage motor allows high-frequency use for heavy-duty cleanups of dust and dirt or liquid spills. Standard vacuums filter the outgoing air through the vacuum bag. HEPA filter vacuums force air through a fine mesh that traps harmful particles such as pollen, pet dander, dust mites, and tobacco smoke. Vacuums plug into an electrical outlet to generate suction and have a large tank for holding vacuumed debris or liquids. These vacuums withstand frequent use at manufacturing facilities and building or construction sites.

Pneumatic Industrial Drum Vacuums

Drum vacuums operate on a compressed-air supply to suction dust and dirt or liquid spills into their drum for disposal. They withstand high-frequency use and reduce the risk of downtime since they have no electric motor to burn out. These air-powered vacuums are commonly connected to air compressors at construction sites or pneumatic hoses in manufacturing facilities.

Static-Conductive Pneumatic Drum Vacuums

- Wet/Dry pickup

Drum vacuums with static-conductive components suppress the buildup of electrical charges, which can cause nuisance shocks. They're ideal for vacuuming talc, powders, and other substances that can generate static electricity. They operate on a compressed-air supply to suction dust and dirt or liquid spills into their drum for disposal. These air-powered vacuums withstand high-frequency use and reduce the risk of downtime since they have no electric motor to burn out. They're commonly powered by air compressors at construction sites or pneumatic hoses in manufacturing facilities.

Corded Dust Extractors

- Wet/Dry pickup

Plug extractors into an outlet near machinery and power tools to collect dust from cutting, sanding, and grinding operations. They are commonly used in workshops, factories, and other locations. Dust extractors draw in dust as it's produced by machinery to help prevent dust from becoming airborne or accumulating on floors, surfaces, and tools.

Cordless Dust Extractors

Extractors run on battery power and connect to stationary or handheld power tools to collect dust from cutting, sanding, and grinding operations. They're commonly used at remote jobsites and locations where a power outlet isn't available. Dust extractors draw in dust as it's produced by machinery to help prevent dust from becoming airborne or accumulating on floors, surfaces, and tools.

Power-On-Demand Vacuum

▪ Dry pickup

Connects to a power tool for dust extraction and shuts off automatically when the tool shuts off. It has an outlet on the operating panel for plugging in power tools, so that the vacuum will run only when the power tool runs. It's used for collecting dust from cutting, sanding, drilling, and grinding tools. Vacuum also functions as wet/dry vacuums for cleaning dust and dirt or liquid spills.

GUARDAIR.

Pneumatic Personnel Cleaning Stations

▪ Wet/Dry pickup

Vacuum dust, powders, and chips from workers' clothing and skin. Stations provide an alternative to dusting off with air guns, which generate potentially dangerous pressures that could cause eye or ear injuries. Powered by compressed air and have a brush attachment to loosen particles so they can be suctioned into the attached tank. Nonelectrical discharge (NED) protection suppresses static-charge buildup to allow use with combustible materials such as metal or coal dust, flour, grain, and sugar.

Husqvarna

Dustless Technologies

Slurry Vacuums

▪ Wet pickup

Suction up the mix of water and dust generated by concrete cutting, drilling, grinding, and sawing. They handle slurries, which are typically too heavy for standard wet/dry vacuums. Slurry vacuums help prevent hazardous dust from becoming airborne and keep slurry from clogging drains and entering sewage systems.

Nilfisk DRI-EAZ

Built-In-Pump Vacuums

10W854

39C364

▪ Wet pickup

Combine a wet/dry vacuum for cleaning up dust, dirt, or liquid spills and a pump for transferring large volumes of water. They can suction debris or liquids into the tank like a standard shop vacuum or can connect to a garden hose to pump water through the hose as it's suctioned into the vacuum. This pumping feature eliminates the need to empty the tank when clearing water from flooded basements or broken pipes.

10W854 operates in three modes: vacuum only, pump only, or vacuum and pump. **39C364** quickly removes water from flooded structures.

Sanitaire Hoover Commercial Dayton

Bagless, Corded Upright Vacuums

- Dry pickup

Bagless, corded upright vacuums collect dirt, dust, and debris in their dirt cup or chamber for disposal. The see-through chamber shows the level of debris, so it can be cleared out when full to prevent reduced suction or an overheated motor. These bagless vacuums eliminate the need for replacement bags and rely on filters to trap dust and allergens and keep debris from entering the motor.

Bagged, Corded Upright Vacuums

- Dry pickup

Corded upright vacuums plug into an electrical outlet to lift dirt from carpet fibers. Reusable bags collect dirt, dust, and debris in bags that can be emptied and reused making it easy to recover small items (such as jewelry and toys). Disposable bags collect dirt, dust, and allergens in replaceable bags that are discarded when full. They minimize contact with collected debris since their disposable bags don't need to be shaken out like reusable bags or cleaned out like a dirt cup. Both types of bags act as filters to trap dust and allergens.

Bagless, Cordless Upright Vacuums

- Dry pickup

Operate without the limitations of a power cord to collect dirt and debris in their dirt cup or chamber for disposal. They typically have a see-through chamber that shows the level of debris, so it can be cleared out when full to prevent reduced suction or an overheated motor. These bagless vacuums eliminate the need for replacement bags and rely on filters to trap dust and allergens and keep debris from entering the motor.

Makita Vacuums—2-stage filtration system. Floor nozzle aids in maneuverability and debris collection.

Sanitaire Vacuum—Low profile allows machine to lay flat for extra maneuverability under furniture.

Stick Sweepers

Floor sweepers pick up dust and debris from carpeting as well as hardwood, tile, or vinyl flooring. They have a slim cleaning head and a pivoting handle for cleaning under furniture and machinery. Their quiet operation makes them suitable for use in hotels and hospitality environments.

Rubbermaid Sweepers—Corner brushes help clean tight spots. **5M865** cleans bare floors and low-pile carpets. **5M867** has a low profile for cleaning under furniture on a variety of floor surfaces. **4HC27** includes soft bumpers to product furniture on bare floors or low-pile carpets.

Bissell Sweepers—36RE54–36RE56 include dual-debris canisters, plus corner brushes for hard-to-reach areas on bare floors and low-pile carpets. **36RE53** is battery-operated with a 90-min. run time. Roller brush sweeps dirt into its dustpan.

Bagless, Cordless Backpack Vacuums

- Dry pickup

18V, M18 FUEL series vacuums rest on your back and operate without the limitations of a power cord to collect dirt and debris in their dirt cup or chamber for disposal. The chamber also allows small items to be recovered from the collected debris. Vacuums eliminate the need for replacement bags and rely on filters to trap dust and allergens and keep debris from entering the motor. Brushless motor has the suction power to clean up drywall dust, concrete dust, and wood/metal shavings.

Bagged, Corded Canister Vacuums

- Dry pickup

Vacuums trap dirt, dust, and allergens in replaceable bags that are discarded when full. They keep debris contained for disposal to help prevent recirculation of dust and allergens, making them a common choice for vacuuming in healthcare and educational settings. These vacuums have a lightweight wand for cleaning and a canister that houses the electric-powered motor and holds the collected debris. HEPA filter vacuums force air through a fine mesh that traps harmful particles such as pollen, pet dander, dust mites, and tobacco smoke. ULPA filters trap more and smaller particulate matter than HEPA filters. **48ME63** is compact for increased portability and maneuverability. **30RR52** cleans hard surfaces, carpet, furniture, and above-floor areas. **566G94** is HEPA safe for immediate containment in hazardous particulate applications. **9RY02** has a large capacity for mold, lead, or asbestos remediation. **36RE57** comes with on-board cleaning tools for carpets, upholstery, and more.

Computer/Electronics/Data Vacuums

METROVAC® ATRIX

- Dry pickup

Remove dust and dirt buildup from computers, data equipment, and office machines to prevent damage or overheating. They provide an alternative to canned-air dusters for cleaning out keyboards and clearing dust from equipment-cooling fans. Include micro-cleaning attachments for adapting to different cleaning angles and getting into tight spaces.

DataVac Pro Series are all-steel, high-tech vacuums/blowers. **Express** is an ESD-safe vacuum for servicing and cleaning static-sensitive equipment. **Omega Supreme** is also ESD-safe and can be used for collecting hazardous debris such as lead dust, silica dust, and mold. Accessories store in lid.

ESD-Safe Vacuums

METROVAC® Nilfisk ATRIX

- Dry pickup

Vacuums dissipate static electricity to avoid damaging sensitive electronic equipment during cleaning. Also known as antistatic vacuums, they create a path for grounding static electricity to prevent discharges that could cause interruptions or failures of computers, printers, data equipment, robotic devices, and other electronics.

Use **45RK33** as a vacuum/blower to remove dust, lint, hair, debris, and paper shreds from electronics. **4RXY7** can be used in both portable and stationary applications with a 4-stage filtration system. **2TUX8** is a complete antistatic vacuum, blower, and dusting system for electronics. **2FTK2** filter canister is resealable and disposable. Captures large volumes of debris and particulate.

4NFP9

Cleanroom Vacuums

Nilfisk

- Dry pickup

Disposable bag vacuums provide multiple stages of filtration for collecting fine dust and powders in cleanrooms, labs, and other controlled environments. They remove contaminants and other airborne particles to meet specific cleanroom standards. Capture the largest particles during the first stage of filtration and capture finer particles during the following stages. Their final filtration stage traps ultra-fine particles and prevents them from recirculating.

4NFP9 has an extra-large filter, plus a thermal protection device to keep motor from overheating. Hose provides ESD protection. **4RXY8** and **4RXY9** are compact and wheels make them easy to maneuver. **4RXY8** can safely collect and contain potent compounds for disposal.

Explosion-Proof Vacuums

Nilfisk

These bagless vacuums are made of nonsparking materials to help prevent the ignition of combustible dust. They allow cleaning in areas where dry goods and other potential ignition sources are stored or processed. They're commonly used around products such as flour, starch, animal feed, light metals, coal, plastics, and textiles. All-in-one design safely collects and renders inert Group E metal dusts including aluminum, magnesium, and other commercial alloys.

61HV93

Pneumatic Drum-Top Vacuum Heads

Vacuum heads operate on a compressed-air supply, so they have no electric motor to burn out and no moving parts to wear out. They're commonly used in wet environments where an electric-powered vacuum could be hazardous. They generate strong suction to draw wet or dry materials into an attached 55-gallon drum. Designed for flood control, sludge pickup, and cleaning of sumps and coolant tanks.

Note: All air vacuums come with a 3/16" jet installed. 7/32" and 1/4" jets are also supplied.

Bagged, Cordless Handheld Vacuum

Vacuum operates without the limitations of a power cord to trap dirt, dust, and allergens in replaceable bags that are discarded when full. The bags keep debris contained for disposal to help prevent recirculation of dust and allergens.

462R86

Bagless, Cordless Handheld Vacuums

Vacuums operate without power cord restrictions to collect dust and debris from small cleaning jobs in their dirt cup for disposal. The dirt cup can be cleared out when full to prevent reduced suction or an overheated motor and also allows small items to be recovered from the collected debris. These bagless vacuums eliminate the need for replacement bags and rely on filters to trap dust and allergens and keep debris from entering the motor.

Vacuum Bags

Collect vacuumed dust and debris for disposal and help filter out allergens and dust particles to prevent them from recirculating in the air. New or empty bags help prevent clogs, suction loss, and motor burnout. Disposable bags are discarded when full and replaced with a new bag to minimize contact with collected dirt. Reusable bags are shaken out when full and used again to reduce waste.

Vacuum Filters

- Reusable

Trap dust and allergens to keep them from recirculating in the air or entering the vacuum's motor. Filters are usually found near the vacuum's exhaust port to catch fine particles that haven't been collected in the vacuum bag or dirt cup. These filters are used for regularly replacing old filters to maintain suction and avoid motor burnout, and to change out clogged or damaged filters. Filters typically fit specific vacuum cleaner brands or models.

Vacuum Hoses

- Plastic

Hoses attach to a vacuum cleaner's intake port to draw in dirt and debris. They connect with compatible attachments to extend their length or adapt to specialized jobs, such as cleaning crevices and upholstery. These vacuum cleaner hoses are used as replacements for hoses that are worn, damaged, or no longer maintain suction.

Carpet Extractors

STRIVE SERIES WITH READYSPACE

ReadySpace technology allows carpets to dry and be ready for foot traffic in 30 min. or less. Rollers and deep cleaning brushes can perform interim and restorative carpet cleaning.

SELF-CONTAINED EXTRACTORS

EX-SC-1020—Extractors have a drop-down hose for easy emptying, a solenoid valve that helps prevent drips, and simple controls for ease of use.

Speed EX Compact—Electric extractor features lift-off solution and recovery tanks for easy cleaning and filling. Noncorrosive aluminum scrub head and rotomolded tanks for durability. Handle is adjustable for ease of use and folds down for storage.

Falcon 2800 Plus—Self-propelled extractor has a 75-ft. power cord and electronic speed control for greater efficiency. Rear-mounted pivoting head provides greater solution recovery for faster drying time. Includes a prespray wand for cleaning heavily soiled areas.

Falcon Ultra Battery—Self-propelled front-mounted head allows for easy maneuvering around corners and narrow aisles. Six spray heads with 100 psi for enhanced solution dispersal and better cleaning performance. Runs up to 4 hr. on a single charge.

PORTABLE EXTRACTOR

Marathon 350 Carpet Spotter—Spray extractor cleaner tackles upholstery, staircases, drapes, and other challenging cleaning applications. Perfect for handling small carpeted areas. Highly mobile unit can be transported from room to room rapidly. Weighs only 22 lb.

Defoamer for Carpet Extraction Recovery Tanks

Ready-to-use liquid defoamer is used in the recovery tank of hot water extraction machines to keep dirty water and cleaning solutions from foaming. These concentrated antifoam liquids control excessive foam in hoses, tools, and recovery tanks to protect carpet extractor motors from damage including clogging, corrosion, or electrical shorts.

45NY63

Walk-Behind Floor Sweepers

- Adjustable main and side brooms
- Easy-to-empty hopper

Battery-Powered Sweepers—Compact machines easily clean most indoor and outdoor surfaces in a single pass. **60KL32** offers a quiet, 61 dBA sound level to allow sweeping anytime, even in noise-sensitive environments. Dual-brush system is 99.5% efficient for particles up to 2 microns. Runs on a maintenance-free, rechargeable 12V battery. Includes brushes, battery, and onboard charger. **45NY63** utilizes 3 brushes. The two front brushes rotate in opposite directions grabbing the debris directly in front of the sweeper while the brush roller on the bottom picks up all the fine particles. Includes brushes and battery.

Push Sweeper—Lightweight, durable sweeper is easy to maneuver for cleaning dirt, dust, and litter from hard surfaces such as asphalt, wood, or cement. Rotary side brooms sweep debris into the path of the main broom, which feeds the large hopper. Dent- and rust-resistant construction stands up to rough use. Includes lubricant spray.

Replacement Floor Scrubber Rotary Brushes

1MEH6 Clutch Plate sold below. More sizes and styles available on Grainger.com.

POLY GENERAL SCRUBBING BRUSH
Polypropylene 0.028" bristles for general scrubbing of most floor types.

NYLON GENERAL SCRUBBING BRUSH
Nylon 0.028" bristles for general scrubbing of most floor types.

LIGHT SCRUBBING BRUSHES
Nylon 0.018" fibers with 500-grit silicon carbide for light-to-medium scrubbing of vinyl, sealed concrete, terrazzo, slate, and marble floors.

MEDIUM SCRUBBING BRUSHES
Nylon 0.022" fibers with 320-grit silicon carbide for medium to mildly aggressive scrubbing of resilient floors, nonslip flooring, terrazzo, quarry tile, and concrete. Asymmetrical bristles for effective cleaning on uneven surfaces.

STRIPPING BRUSHES
Nylon 0.050" fibers with 80-grit silicon carbide for aggressive scrubbing of concrete and stripping of resilient floors, terrazzo, and tile. Constructed with bristles of different lengths that work well on uneven surfaces.

HEAVY-DUTY STRIPPING BRUSHES
Nylon 0.060" fibers with 46-grit silicon carbide for aggressive scrubbing of concrete surfaces and aggressive stripping of resilient floors. Irregular bristle length assures cleaning on uneven surf aces.

CARPET CLEANING BRUSHES
Polyester bristles scrub carpet while glide plate supports the weight of the machine.

SANDING DISCS
For aggressive and effective sanding of wood floors.

CLUTCH PLATE
For brushes and pad drivers with 5" dia. center holes. Cast of durable zinc alloy.

Floor Surface Preparation Pads

1EKC3

Use with rotary or automatic floor machines. These environmentally preferable floor pads require only a neutral cleaner or water, reducing the use of chemicals. Nonwoven mineral floor pad construction enables pad to remove floor finish from a variety of hard floor surfaces, including vinyl tile, marble, terrazzo, concrete, and wood floors. Compatible with water-based or solvent-based finishes.

Stripping, Scrubbing, and Buffing/Cleaning Pads

Environmentally sustainable pads are washable and reusable.

STRIPPING PADS

For rotary and automatic floor machines.

High-Productivity Black 7300

Remove old finish, dirt, and buildup. Increase pad-to-floor contact for more efficient stripping. Use to strip heavy buildup or for quick stripping.

Black 7200

Wet strip floors, maintaining consistent performance throughout the pad life.

Brown 7100

Resilient pads can be used for wet or dry stripping on uneven floors. Quickly and easily cut through old finish to prepare floors for refinishing.

SCRUBBING PADS

Use with rotary and automatic floor machines.

Blue 5300

Remove dirt, spills and scuffs, leaving a clean surface ready for recoating. For heavy-duty scrubbing prior to recoating.

BUFFING/CLEANING PADS

Red 5100

Clean when damp, buff when dry. Use for light scrubbing without dulling the finish. For rotary and automatic floor machines.

White Super Polish 4100

Pad buffs very soft finishes and lower-traffic areas; or use for polishing soft waxes on wood floors. For rotary floor machines.

Preburnishing and Burnishing Pads

Environmentally sustainable pads are washable and reusable.

PREBURNISHING PADS

TopLine Autoscrubber Green 5000

For light scrubbing of floors before burnishing with minimal finish removal. For rotary or automatic floor machines.

BURNISHING PADS

For ultra high-speed floor machines.

Sky Blue Hi-Performance 3050

Restore gloss to dull floors. Great for frequent burnishing with less dust, point build up, and burning.

Aqua 3100

Produce a brilliant gloss on softer finishes or in lower traffic areas. Exceptional durability.

TopLine Peach 3200

Pads restore gloss to dull floors in a single pass. For use on floors with good base coat. Minimal finish removal.

Natural Blend White 3300

Use natural hair and synthetic fiber pads for outstanding results on a wide variety of finishes and traffic conditions. Provide high gloss while minimizing swirl marks.

Tan 3400

Provide a brilliant "wet-look" finish on harder finishes or high-traffic areas. Best choice for scratch and scuff removal.

Natural Blend Tan 3500

Natural hair and synthetic fiber pads provide excellent results on harder finishes and high-traffic areas. Remove marks and scuffs while polishing.

Eraser Pink 3600

For optimum results on harder finishes and heavy-traffic floors. Remove black marks, restore excellent gloss and image clarity.

Cold Water Pressure Washers, Electric/Direct-Drive

NORTH AMERICA First Choice When Quality Matters

- 3 piston axial pump
- Tempered stainless steel plungers

All models, except 5RCC2, feature a TSS motor (Total Stop System) which turns on and off when spray gun is activated and has an automatic safety valve with pressure shutoff at the head. Units include an adjustable high-pressure nozzle. All units include either foam bottle or chemical injector. 5RCC2 and 5RCC3 also come with a ceramic plunger and crank shaft pump. 3APW3 and 786A14 include a turbo nozzle/lance. 468C08 has a quick-connect soap nozzle.

Cold Water Pressure Washers, Electric Motor

Mi-T-M Performance Under Pressure.

- Crankshaft pump
- Solid ceramic pistons
- Downstream, low-pressure chemical injection
- Thermal relief valve prevents pump damage

Quiet operation and no engine exhaust make them ideal for indoor use.

DIRECT-DRIVE

35-ft. cord has ground fault circuit interrupter (except 3WB89). Include 36" insulated wand with 0° to 60° spray nozzle except 3WB88 and 3WB89 which are equipped with 15° and 25° high-pressure/chemical nozzle. Cart Style units include solid steel axles and tubed pneumatic tires. Max. intake water temp.: 125°F.

BELT-DRIVE

Stationary Style

3WB73 and 3WB74 are designed for hot water use without any exhaust. Feature 4-ft. cord with ground fault circuit interrupter, user-adjustable time delay auto shutdown, and thermal overload protection. Industrial-duty motor is enclosed in an easy-to-access stainless steel cabinet. Max. intake water temp.: 180°F. Include 36" wand with 0°, 15°, 25°, and 40° quick-connect nozzles.

Cart Style

20KC14 features thermal overload protection, external bypass system, and totally enclosed powder-coated belt guard. Includes 50-ft. ⅜" nonmarking hose, insulated lance and trigger gun with safety lock, and 10-ft. power cord.

Mi-T-M Performance Under Pressure. Dayton

Cold Water Pressure Washers, Electric Motor

- Solid ceramic pistons
- Crankshaft pumps

These washers generate fluid pressure with a lightweight electric motor that provides cleaner and quieter operation than gas-powered engines. They remove mud, dirt, and debris and more from a variety of surfaces. All except 486Z79 and 52PF29 feature a built-in chemical detergent injector to apply cleaning agents and eliminate the need to scrub by hand. Available in cart-style and carry-style. Carry-style washers are lightweight and portable and can be used just about anywhere. CSA Certified.

Mi-T-M Performance Under Pressure. ChoreMaster

Cold Water Pressure Washers, Portable Gas or Diesel Engine

- Downstream, low-pressure chemical injection
- Thermal relief valve
- Solid steel frames

DIRECT-DRIVE

High pressure rating and compact design make these washers great for light- to medium-duty use. Include 36" wand, solid steel axles, and pneumatic tires.

Mi-T-M Models—Feature low oil shutdown, except 3WB97. Quick-connect nozzles: 0°, 15°, 25°, and chemical, except 3WB97 has 15°, 25°, and chemical only.

ChoreMaster—Feature fold-down steel handles and inline water strainer. Quick-connect nozzles: 15°, 25°, and chemical.

BELT-DRIVE

Provide less wear and longer life than direct-drive pumps. Ideal for heavy-duty use. Include external vibration- and heat-reducing bypass system and low-oil motor protection. Include 36" wand and 0°, 15°, 25°, 40°, and chemical quick-connect nozzles. 6CGP0 and 6CGP1 come with a 48" wand.

23-HP Electric Start—Large fuel tank allows 8-hr. run time. Dry battery included. Has a roll cage frame and lifting hook.

Mi-T-M Performance Under Pressure.

Hot Water Pressure Washers, Electric Motor

- Crankshaft pump
- Solid ceramic pistons
- High-pressure chemical injection
- Output water temp.: 190° to 200°F (pressure washers); 250° to 300°F (steam cleaners)

Mounted on sturdy rolling frames with tubed pneumatic tires and solid steel axles. Feature enclosed fan-cooled industrial motors. Thermal relief valve helps prevent pump damage and an easy-access coil drain helps prevents freezing. Include ⅜" x 50-ft. hoses, 36" wand with 15° and chemical quick-connect nozzles, and 35-ft. electrical cord with GFCI, except 48UH46 and 48UH47.

Note: Additional models are available on Grainger.com.

DIESEL OR KEROSENE

Top-fired oil burner enhances fuel efficiency and servicing. Burn #1 or #2 diesel fuel or kerosene. Solid state electronic ignition. Heavy-duty frame, roll cage, and lifting hook. 3WB94 and 2GXK5 include 0°, 15°, 25°, 40°, and chemical quick-connect nozzles.

ELECTRIC BURNER

Eliminates exhaust fumes for interior cleaning applications. Heat exchanger cartridges provide consistent on-demand hot water.

Mi-T-M Performance Under Pressure.

Hot Water Pressure Washers, Diesel or Kerosene Engine

- Crankshaft pump
- Solid ceramic pistons
- Low-pressure chemical injector
- Output water temp.: 200°F
- Thermal relief valve

Electro Magnetic Firing (EMF) system requires no battery, generator, motor, or transformer. Top-fired burner assembly. Units burn #1 or #2 diesel fuel or kerosene. Include pneumatic tires and solid steel axles. Feature easy-access coil drain and overpressure protection. Dual 36" wand with fixed chemical nozzle and 0°, 15°, 25°, and 40° quick-connect nozzles. Electric start models include dry battery. Wrapped frame with lifting hook. Hood cover tilts for easy burner access. Skid-mount is heavy-duty powder-coated steel square tube frame. ½" schedule 80-coil with stainless steel wrap heat exchanger. Polyethylene burner and engine fuel tanks. Temperature rise is 150°F/66°C above ambient; max. outlet temperature is 200°F. Quick-connect nozzles: 0°, 15°, 25°, and 40°, 10-gal. fuel tank capacity. Oversized crankshaft pump with upgraded bearings.

Note: Additional kerosene pressure washer models are available on Grainger.com.

Telescoping Wands

- Feature internal high-pressure hoses
- Pole tips fit standard quick-connect nozzles

Feature removable angled spray head. Compatible with quick-connect-style nozzles. Ideal as an accessory for pressure washers, for cleaning home siding, industrial buildings, and trailers. Twist collar to extend and retract the wand.

WAND SUPPORT BELT

- Nylon belt with adjustable hook-and-loop closure
- Supports 18- and 24-ft. telescoping wands

Wand clamps to the belt for greater support and comfort during long cleaning jobs.

Nozzles and Filters

TURBO ROTARY SPRAY NOZZLES

Improve washer's efficiency and provide the blasting power of a 0° nozzle over a wide 20° cleaning stream area. Solid brass body with ceramic orifice. Rubber housing protects against impact. Max. fluid temp. is 195°F (200°F for 35XH58 and 35XH59). ¼" (F)NPT inlet. 5JKN1 is for use with 5JKN3, see page 1591, and includes filler and quick connect.

Note: The operation of the turbo nozzle may cause damage to the surface being sprayed. Test on a small area before using on intended application.

SPECIALTY NOZZLES

No physical nozzle change necessary between high pressure and soap nozzles. Max. fluid temp. is 300°F; inlet and outlet ports are ¼" (F). 5RCC4 Long-Range Soap Nozzle quick connects to pressure washer wand and projects chemicals 15 to 20 ft. Adjusts from fan spray to stream. No assembly required.

TURBO NOZZLE INLET FILTERS

Filters prevent turbo nozzles from clogging by trapping fine debris particles. Install easily between the end of the lance and turbo nozzle. Max. flow is 8 gpm; max. fluid temp. is 200°F.

Sewer Cleaning Pressure Washer Accessories

Use to convert pressure washers to jetting machines, or to clean sewer drain lines.

SEWER AND ROTATING NOZZLES

Stainless steel, bull-nose nozzle slides easily into drain pipes and sewer lines to flush debris or clear frozen pipes while attached to sewer hose.

SEWER HOSE

Flexible hose for use with sewer nozzles. Max. temp.: 160°F.

FOOT-ACTUATED VALVES

Foot-controlled valves allow both hands to be free to control the sewer hose. ¼" FNPT outlet.

PUMP DISABLER VALVES

Jetter valves convert standard triplex plunger pumps into sewer cleaning pumps. Disabler pulse valves have adjustable levers to change pump to either configuration by turning the handle on the valve.

REELCRAFT

Mi-T-M

Pressure Wash Hand-Crank Hose Reels

These hose reels are equipped with a high-pressure water swivel that handles a broad range of pressures, temperatures, and chemicals. These steel reels withstand corrosion, hold tangle-free hose, and mount on the floor, wall, bench, or in trucks. They are used with water or chemical hoses for equipment cleaning, pressure washing, and in agricultural spraying.

SPEEDAIRE

Pressure Washer Hoses

SPEEDAIRE

2600 psi models have a textile braid reinforcement, and RMA Class B oil resistance. 3000 to 4500 psi models have a wire braid reinforcement, and RMA Class A oil resistance.

YELLOW, NITRILE

Stainless steel wire braid reinforcement for protection against oil and animal fat. RMA Class A oil resistance and 4:1 safety factor.

BLUE AND BLACK, NITRILE

1500 psi models have a textile braid reinforcement. 3000 and 4500 psi models have a wire braid reinforcement. Blue hoses are nonmarking and abrasion resistant. RMA Class B oil resistance and 4:1 safety factor.

FOOD GRADE

Single wire braid reinforcement. Resists oil, abrasion, and animal fats. Outside cover has Microban antimicrobial protection. 4:1 safety factor.

STEAM CLEANER/ PRESSURE WASHER

Single wire braid reinforcement. For steam cleaners or combination steam cleaners/pressure washers. Handles hot water up to 250°F at 3000 psi (2500 psi on ½"), or steam up to 325°F at 350 psi. 4:1 safety factor.

** S=Swivel*

For additional paint, go to Grainger.com and search interior paint.

Looking for a Specific Color? Here's How:

STEP 1

Identify the color type under the "Paint Color Family" column.

Example: Blues.

Paint Color Family	FLAT 1 gal. Item No.	FLAT 5 gal. Item No.
Blues	J2138	J2146
Greens	J2139	J2147
Neutrals	J2140	J2148

STEP 2

Decide what size and finish you'll need. Then locate the item number in the table under the finish and "Item No." column.

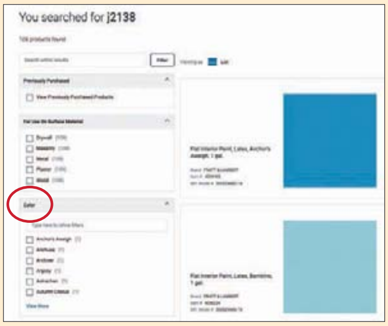
Example: J2138 – FLAT, 1 gal.

Paint Color Family	FLAT 1 gal. Item No.	FLAT 5 gal. Item No.
Blues	J2138	J2146
Greens	J2139	J2147
Neutrals	J2140	J2148

STEP 3

Search for the Item number on **Grainger.com**. Select Paint, Equipment and Supplies.

Once on that page, you will see all of the available colors.



Architectural Paint

Accolade Paint
The finest-quality paint and primer in one is 100% acrylic waterborne and features a low-VOC formula.

Fresh Spec Zero VOC Paint
Premium quality, professional low-VOC coating is GREENGUARD GOLD certified. It offers high hide, smooth application, and makes touch ups easy.

Pro-Hide Gold Ultra Paint
Best professional quality product is ideal for both residential and commercial applications.

Pro-Hide Silver 5000 Paint
Proven performance for professionals on a budget.

Economy Paint
A quality, general-use paint for high-turnover jobs.

Paint Finish Types

FLAT
Minimally reflective finish free from gloss or sheen. Meant to absorb light in order to hide imperfections.

VELVET
Soft, stain-resistant finish has low light reflectivity. Minimizes imperfections and maintains uniformity.

EGGSHELL
Low luster that noticeably reflects light.

MID-SHEEN
Very versatile with subtle gloss and average light reflectivity. Washable, scrubbable finish is burnish-resistant.

SATIN
Low luster appearance is ideal for higher traffic areas.

SEMI-GLOSS
Moderate glossy finish provides great reflectivity. Shiny finish is washable and scrubbable with excellent stain resistance.

PRATT & LAMBERT PAINTS *Never compromise*

Accolade Paint

- Dry time: 30 min. to touch, 4 hours to recoat
- Coverage: 400 sq. ft./gal.
- VOC content: <50 g/L

Provides excellent coverage and hide. Washable, scrubbable paint applies smoothly with outstanding durability. Use on properly prepared drywall, plaster, masonry, wood, metal, and previously painted surfaces.

Note: All paint is nonreturnable.

Drywall Repair

Use with gypsum, drywall, nailheads, corner beads, wood, plastic, brick, plaster, metal, stucco, masonry, and concrete.

COMPOUNDS

DryDex Premium Lightweight Joint Compound—Features dry time indicator. Compound goes on pink, dries white.

Lightweight Wallboard Joint Compound—Ready-mixed lightweight formula.

DAP FASTPATCH 30 Patching Compound Powder —Multipurpose formula resists impacts, shrinking, and cracking. Can be painted without priming.

SPACKLING

DryDex Spackling—Dry-time indicator goes on pink and dries white.

Vinyl Interior Spackling—Resists cracking and crumbling.

Fast n' Final Lightweight Spackling - Interior/Exterior—1-step interior/exterior formula requires no sanding. White color. Lightweight.

10L498

PATCHING

ElastoPatch Flexible Patching Compound—Permanently eliminates recurring cracks.

Presto Patch Ready-Mixed Multi-Purpose Patching Compound—Ready mixed patching compound for filling, leveling, and patching holes.

All-Purpose Stucco Patch—Blends naturally with existing stucco. Interior and exterior use.

Wood Filler—Fills small holes and cracks in interior and exterior surfaces. Adheres to stucco, plaster, drywall, and wood.

Plaster of Paris—For patching and repairing large holes in interior plaster or wallboard.

Patching Plaster—For major repairs on interior plaster or wallboard surfaces.

Rust Tough and Rust Tough 250 Primer and Paint

- VOC content: < 250 g/L

Corrosion-resistant, direct-to-metal alkyd enamel. Protects against mild chemicals, fumes, oil, and grease stains. Excellent hide, color, and gloss retention. Superior chip, crack, and peel resistance. Rust Tough 250 performs like a traditional alkyd enamel. For use in moderate to severe industrial environments and is acceptable for use in federally inspected meat and poultry plants.

Tough Coat and Tough Coat Quik-Dry Paint

Multipurpose alkyd gloss enamel designed for new construction and industrial maintenance applications. For interior and exterior applications. Dries fast and allows equipment to be placed back in service quickly. Chip and flake resistant. Tough Coat Quik-Dry is ideal for industrial, OEM and metal fabrication. Air dries within 15 min.

Industrial Primer

Heavy-duty primer offers good protection for steel in normal industrial environments. Industrial Primer is for interior and exterior use. Easy to apply by spray. Fast drying. Can be topcoated with alkyd and latex coatings. Weld-Thru Primer is rust inhibitive and designed for shop-priming structural steel. Excellent choice for where harsh environments put heavy performance demands on a shop-applied primer. May be welded through with no effect on the weld's integrity.

HVAC & Mold Resistant Coatings

- Surface texture: porous, smooth

General Purpose—Developed for high moisture areas, mold-resistant primers and sealers form a dehydrated finish that does not allow moisture penetration. The finish minimizes nutrients that feed mold colonies.

Fungicidal & Mold—The high viscosity provides maximum bridging ability on insulating materials and reduces sagging and dripping on vertical or top surfaces. The finish minimizes nutrients that feed mold colonies.

Mold-Inhibiting—Designed for use in ductwork. These sealants dry to form durable, flexible, and moisture-resistant protective coatings.

Epoxy Primers Activators & Base Coatings

RUST-OLEUM BRANDS

Epoxy floor coatings apply to surfaces in commercial shops, garages, labs, factories, building lobbies, and similar settings to protect them from damage or adapt them for specific environments.

Single Component Epoxy Systems are latex acrylic floor paints with a small addition of epoxy, which air dries like a traditional paint. They do not require a separate activator base or primer.

Multi Component Epoxy Systems are two-part epoxy floor coatings that require separate cans for primer, activator and base (see Grainger.com for additional bases) that cure by a reaction when parts are mixed. Used for large scale, quick applications in medium duty environments.

Pre Packaged Epoxy Component Kits are designed to cover predetermined sizes of floors. Kits commonly contain quantities of polymer, pigment, and epoxy flakes to apply a non-skid surface to floors and walkways. These kits are commonly used on garage floors of all types where a quick turn-around, durable system is required.

CRC | RUST-OLEUM BRANDS | Florock Excellence in Polymer Flooring

Urethane Activators & Base Coatings

Urethanes have better resistance to UV rays and abrasion than epoxies but are less hard. They are well suited for use on surfaces that are exposed to sunlight.

Single Component Urethane Systems provide toughness, flexibility, abrasion resistance, and excellent UV resistance on commercial or residential floors.

Multi Component Urethane Systems are abrasion resistant and more color-retentive than epoxy coatings. These coatings can last longer and look better because the two-process application system bonds more tightly to the floor surface than single-component systems. Activator and base sold separately.

Pre Packaged Urethane Component Kits resurface concrete floors and add color to designate walkways or other markings. They are able to provide a number of performance functions such as slip resistance, chemical resistance, and abrasion resistance.

1AJZ3 Wooster

RUST-OLEUM CONCRETE SAVER | H&C CONCRETE INSPIRED. | INSL-X | RUST-OLEUM BRANDS | WOOSTER PRODUCTS, INC.

Single Component Acrylic Systems

Acrylic primers are designed for use on both interior and exterior floors. They dry rapidly to a tough, alkali-resistant finish that will withstand hard wear, abrasion, grease, and strong cleaners.

Concrete Saver eliminates dusting, blocks stains, and makes floor easier to clean. Easy touch-up and recoat. Roller application.

H&C creates the look of acid stain, and penetrates into the concrete for a faux layered look. A clear coat is required.

INSL-X by Benjamin Moore helps provide a durable finish for interior or exterior applications that require extra skid resistance. It also helps fill and seal cracks, and provide resistance to abrasions and ponding water. The coating is water-reduced, which allows for easy application, fast drying, and simple clean up. It is ideal for stairs, walkways, patios, and other areas with high foot traffic.

Rust-Oleum provides numerous primers and activators including mildew-resistant paint for wood and line striping to anti-slip coatings.

Wooster anti-slip coating provides safe traction for pedestrian traffic. For use on bare wood, concrete, primed metal, asphalt, marble, stone, and other surfaces.

Paint Additives

- Exterior, interior use

Color Additives—Mixed into paint bases and floor coatings to tint the paint or coating to a custom color. These paint tints and coating tints enhance the beauty of painted or coated surfaces by adding color.

Anti-Skid Additives—When mixed with epoxy, latex or oil-based paints, stains, or sealers, create a skid-resistant coating for concrete, wood, metal, or fiberglass. Made from aluminum oxide, these additives are frequently used on industrial stairs, decks, and walkways.

Boiled Linseed Oil—Both a thinner for oil-based paints and a coating. As a thinner, it improves the flow and gloss of oil-based paints. As a coating, it creates a shiny hand-rubbed finish on wood and furniture. It increases wood's resistance to water-marks, scratches, and warping.

Coating Durability Additives—Traditionally used to improve pigment wetting and reduce foaming during processing. These additives improve flow and leveling and substrate wetting during application. They improve UV durability, reduce surface defects, and enhance substrate adhesion in applied coatings.

Paint Solidifiers—Turn liquid latex paint into a solid material within minutes for fast cleanup and curbside disposal. One package hardens up to two-thirds of a gallon of paint in less than an hour.

Leveling and Conditioning Additives—Add flowing or leveling properties to paint without excessively thinning or foaming. These additives are available for both oil-based and water-based paints. They slow down the drying process to ensure that brush streaks can be eliminated.

Special Purpose Spray Paint

KRYLON

Specially-formulated for unique applications and environments.

Appliance Epoxy—Chemical and stain-resistant epoxy is durable, scrubbable, and colorfast.

OSHA Paint—High-visibility safety colors. Approved by the Occupational Safety and Health Act governing board.

Metallic Paint—Dries quickly for a brilliant metallic-like finish.

High-Heat Paint—Withstands temperatures up to 1200°F intermittently, up to 600°F continuously.

Fluorescent Paint—Bright, bold neon colors for maximum visibility and safety. Increase brilliance by 200% to 400%.

Crystal Clear—Provides a tough, long-lasting protective coating.

Chalkboard Paint—Creates a slate-like chalkboard surface. Durable, long-lasting finish.

Farm and Implement—Meets manufacturers' specs for farm, vehicle, maintenance, and lawn and garden equipment.

Camouflage—Bonds to most plastics. No sanding or priming required.

Workable Fixative—Eliminates smudging, wrinkling, and gloss on paper, posters, signs. Dries in seconds to a clear, durable finish.

True Seal Protective Rubberized Coating—Dries to a flexible, rubberized seal. Stops leaks by filling cracks in openings.

NonSkid—Durable, skid-resistant paint makes surfaces safer.

Glowz Glow-in-the-Dark—Finish recharges with exposure to light.

Striping & Marking Paints

Temporary Marking Chalks—Mark surfaces and can be cleaned away using a wire brush or power washer. Chalk allows for straight lines to be drawn on surfaces in a variety of high-visibility or standard colors when used with line reels.

Temporary Marking Paints—Designed to last approximately 30 days before being washed away by rain. These paints are ideal for roads, pavement, gravel, grass, and dirt prior to being permanently marked in the future.

Semi-Permanent Striping Paints—Used to add markings to outdoor surfaces such as concrete, pavement, grass, or gravel for up to three months of use, where permanent markings are not allowed.

Permanent Striping & Marking Paints—Create permanent markings on a surface that won't wash away.

Heat Activated Pavement Markings

Thermoplastic pavement marking paints clearly mark traffic lanes, legends, symbols, and road boundaries on roads, parking lots, and other paved surfaces. They are thicker and more wear resistant than other types of marking paints. These paints are heated and applied to paved surfaces to increase visibility and provide long-term wear.

Line rolls come in a variety of colors for varied road and pavement needs. These rolled strips can be applied to any roadway to delineate the lanes and keep traffic flowing.

Paint Thinners

These liquid paint thinners reduce the viscosity of paint.

General Purpose Paint Thinners—Solvents used to thin or reduce the viscosity of paints to prepare them for spray application or to clean up after their use.

Mineral Spirits—Petroleum-derived clear liquids used as a common organic solvent in cleaning up after painting. Mineral spirits are less expensive than turpentine and thin oil-based paints, stains and varnishes.

Lacquer Thinners—A mixture of solvents able to dissolve a number of different resins or plastics used in lacquer finishes. They clean tools and equipment after a lacquer project.

Xylene Thinners—Used for thinning paints, enamels, varnishes, and alkyd resins. They are highly flammable and are recommended for ventilated or exterior use. Toluene paint removers are fast-drying solvents for thinning oil-based paints, varnishes, enamels and alkyd resins.

Xylol Thinners—Used for thinning paints, enamels, varnishes, and alkyd resins. Often specified as a thinner for specialty paints and coatings, xylene is highly flammable and is recommended for ventilated or exterior use.

Water Immersion Coatings—Protective layers that are applied to a material that will be subjected to water or liquid for an extended period of time. Thinners for immersion coatings reduce the viscosity of the coatings so that it can be spray-applied instead of brushed or rolled onto a surface. This is commonly done for surfaces that are not flat or are uneven.

Paint Removers

General Purpose Paint & Coating Removers—Remove paint, finishes, and coatings while also cleaning the underlying surface.

Acetone—Removes oil stains from walls. It is used as a paint thinner for oil paints and resins and can be used to clean paint brushes, sprayers and other equipment used while painting.

Graffiti Removers—Emulsify and remove paint without extra cleanup. These removers dissolve aerosol paint, enamel, and lacquer from hard or porous surfaces.

Marine Paint Removers—Powerful water-soluble paint and anti-fouling strippers designed for marine uses. These removers can remove up to eight coats of paint in just one application on wood or fiberglass boats. They remove varnish and urethane from fine woods, metals, and glass.

Glaze Removers—Reduce the pH of surfaces being stripped of paint to help improve adhesion of new primer and paints. These removers neutralize surfaces covered in alkaline products or mill glazes.

Remaining Residue Clean Up—Penetrate left over layers of paint and adhesive to clean surfaces prior to painting. They remove grease and other stains to ensure a smooth paint finish.

Sample Kits—Include samples of a variety of paint removers and strippers, allowing users to test a small painted area to determine which product is best suited to remove paint for each individual project and situation.

Preparation Cleaning

Pre-Coating Cleaner—Designed to wash down walls, window/door frames, floors and metals to remove dust, loose paint, wallpaper paste and grit prior to painting. Bottled liquid cleaner requires no further rinsing after the surfaces are wiped down. Removes any type of debris that would prevent a smooth coat of paint.

Muriatic Acid—A bottled liquid diluted solution of hydrochloric acid and is used for a variety of heavy-duty tasks, such as removing salt deposits on rock or stucco. It is also used to remove rust and stain from concrete and brick.

Markal Paint Markers

Permanent liquid paint markers. To choose your "Marking Tool Surface Material" go to Grainger.com, enter "Item No." and use the filter on the left side.

PRO-LINE Fine—Marks on small surfaces and and has a valve-actuated tip.

PRO-LINE HP—Penetrates through oils and greases to dry quickly and leaves a bold mark.

PRO-LINE HT—Fast-drying paint locks in colors and retains some colors that can reach high temperatures, providing legible marks up to 2,200°F.

PRO-LINE WP—Fast-drying formula resists spreading and running when in contact with water or water-based fluids to leave a bright mark.

PRO-LINE XT—Marks on rusty, rough, and dirty surfaces.

PRO-MAX—Formula dries quickly and leaves bold marks.

Valve Action—Low chloride and xylene-free formula.

Brush Size

1XRK1

Foam Brushes

- Bristle thickness 9/16"
- Synthetic foam material

Foam brushes are inexpensive painting tools for either oil or water-based paints. They work best with thin products like stain and polyurethane finishes. These brushes wear out quickly and are best used as throw-away, single-task brushes. **Soft Foam Brushes** are for use with all paints and coatings, for water paint base type and used on concrete, metal and wood. **Firm Foam Brushes** are for use with paints, stains and varnishes, for oil and water paint base type and used on drywall metal and wood.

Chip Brushes

- Natural filament

Chip brushes are used in both painting and maintenance work. They are used to sweep away chips and dust from machinery, and to paint in small places or corners where regular brushes cannot fit. They are commonly used with solvents since they are made with natural China bristles that don't melt. For use with glue, resin, epoxy, and oils, and can be disposed of after one use. China hair filament material, and wood handle, except 38UX48 is plastic.

Angle Sash Brushes

- Synthetic filament

The bristles of an angled sash brush (sometimes called a cutting brush) are cut at a slant, making it easier to paint clean lines. For use on surfaces with grooves, like cabinets, furniture, or paneled doors. The angled sash style is effective for painting close to another surface, such as between window trim and walls. Wood handle, except 38UX44 and 38UX46 are plastic.

Round & Oval Sash Brushes

osborn

Round Sash Brushes have a blunt, tapered tip with soft edges to cover a large area and is commonly used by faux and decorative finish painters. Sizes are measured by the diameter of the bristle head. **Oval Sash Brushes** have thin, rounded bristles and produce a soft, fuller edge. Used for applying oil-based paints, stains, enamels, and other solvents to window mullions, machinery, pipes, and other narrow areas.

Skive Brushes

MICHIGAN BRUSH MANUFACTURING COMPANY, INC.

- Firm bristle stiffness

Skive brushes or paddle paint brushes are designed for painting both broad marks and edges. They are ideal for spreading thick colors over large surface areas. These brushes make a great finishing brush for faux finishing projects on metal and wood, and are used with all paints and coatings. Feature a natural filament and hog hair material, and wood handle.

Electric 36WH30

Manual 45DR38

Paint Power Rollers

- For use with latex and oil based paints

Electric Paint Power Roller System—Include a motor or pump that propels paint from the container to the roller through a hollow tube. The paint reaches the roller and is evenly distributed over the flat surface through tiny pores on the roller cover and saturates the roller wool.

Manual Paint Power Rollers—Include a draw tube that pulls paint into the handle of the roller and feeds it to the roller cover for extended painting times. The tube will refill the pole as many times as necessary, helping to speed painting procedures, eliminating drips and spills, and providing even coverage to any flat surface being painted.

Paint Roller Poles

- Universal connection

Adjustable poles attach to the base of roller frame handles and adjust to increase reach for painting in high areas or on ceilings, reducing the amount of ladder work needed on a job. Poles feature a twist-locking mechanism to hold in place. **Nonadjustable** paint extension poles are stationary sticks with threaded heads, resembling broomsticks. Paint roller frames screw onto the threaded heads and hold paint rollers steady to reach short or moderate heights.

Paint & Stain Edger
12G323

Paint Edgers & Pads

Paint & Stain Edgers create clean, straight lines of paint along molding and trim without using painter's tape. These tools use disposable pads to spread paint alongside areas that are not intended for paint. They provide better control and less splatter than paint brushes, making them faster to use when cutting edges around ceilings, windows, doors, and in corners. **Refill Pads** replace old, worn pads to help ensure smooth, even paint coverage.

Staining Cloths

Paint Mitt
39AN37

Staining Cloths & Paint Mitts

Staining Cloths are cotton cheesecloth squares used for staining or varnishing wood surfaces. Since cloths are thin and pliable, they saturate quickly to fill wood grain and cover surfaces smoothly.

Paint Mitts are multi-layered, lined gloves that provide protection while applying paint or stain in hard-to-reach areas or on irregular surfaces.

Paint Trays & Liners

Paint Trays have a reservoir that works with both brushes and rollers, and a ridged slope for removing excess paint before applying to a surface. They are often used with a disposable tray liner for easier cleanup. **Paint Tray Liners** are disposable plastic inserts that make cleanup easier. Liners are made of solvent-resistant plastic that resists cracking. The form-fitting design snugs tightly to the paint tray to extend the life of the tray for multiple uses.

Paint & Coating Buckets, Pails & Cups

Paint Handheld Cups & Liners are used for mixing small amounts of paints and holding paint for trim work and quick touchups. Paint cup liners are one-use disposable plastic cups that fit into regular paint cups or small pails to keep them clean. Liners are also used for quick color changes between coats.

Paint Mixing & Measuring Paint Pails make it easy to mix paints, pastes, and other adhesives. Pails are imprinted with both standard and metric gradations for accurate measuring. Containers are safe for use with all paints, pastes, and adhesives. Lid is sold separately and allows container to be used for storage.

Paint Roll-Off Buckets, Liners & Lids hold large amounts of paint at one time. **Buckets** have internal grid patterns that allow multiple users to load paint at the same time, increasing efficiency and productivity on large painting jobs. The buckets are easily carried with the ergonomic handle. Time-saving disposable **liners** make cleanup and color changes more efficient. Liners are custom-made for the paint pail and are easily removed for quick disposal. **Lids** are available for use with mix/measure containers, easing storage requirements for unused paint.

Paint Strainers and Cheesecloth

Strainers remove clumps, debris, and other contaminants from paint to leave it smooth and fluid before use. They are commonly used to prepare paint for use in a paint sprayer or to strain old cans of paint before starting a paint job.

Paint strainer bags ensure a tight fit over paint buckets. Bags help paint jobs achieve a smooth finish and also help to reduce clogs in paint sprayer equipment.

Cone strainer holder keep strainers in place while pouring paint through strainers.

Cone paint strainers are disposable and for use with all types of paints and stains. Paint pours easily through the mesh. It also protects spray equipment from debris.

Cheesecloth strains debris from paint.

Surface Protectors

Surface Protection, Film—
A. Self-adhesive film applies quickly and removes easily. Nonslip surface grips carpet firmly. Tear- and puncture-resistant.

B. Clear, self-adhering protective film for all types of carpeting.

C. Reverse-wound nonskid film is easy to apply and protects against spills, dirt, and foot traffic. Removes with no residue.

D. Great for painting and staining. The cloth side absorbs while the coated side is leak-resistant.

E. Heavy-duty, absorbent, slip-resistant, and reusable. Long-lasting and easy-to-clean.

F. Fire-retardant, leakproof, durable, and reusable.

G. Pre-taped along one edge of high-density masking film. Perfect for use in areas when painting.

H. Protective film for HVAC ducts. Helps to meet SMACNA guidelines.

I. Reusable cover holds in place with elastic and fits most standard toilets.

Surface Protection, Paper—
J. Features liquid shield technology that defends floors and other hard surfaces from water, paint, and mud.

K. Economical kraft construction paper, in easy-to-handle rolls, is large enough for several projects.

L. Construction-grade paper protects flooring, cabinets, and counter tops from foot traffic, paint, and spills.

M. Breathable to allow floors to continue the curing process.

Window Shield Self-Adhesive Film—Provide protection to windows and glass.

Carpet Film Applicator—Features a roller design that allows for fast application. Steel construction adjusts to fit 24", 36", and 48" rolls.

Dust Containment Pole—Use with plastic sheeting to keep debris and dust contained to the work area.

TRIMACO

Drop Cloths

Trimaco—Aqua Shield is fire retardant, leakproof, and durable. Eliminator is a durable professional-grade butyl drop. One Tuff drop features a cloth side that absorbs while the coated side is leak-resistant. Stay Put canvas is 300% more slip-resistant than canvas. SuperTuff Double Guard is absorbent paper with a leak-resistant bottom. SuperTuff Leakproof is heavy-duty and absorbent.

Approved Vendor—Washable, heavy-duty 8-oz. canvas. Double-stitched with mildew-resistant thread. Finished hems and seams. Great for indoor and outdoor painting projects.

Flame-Retardant Floor Paper

Spray Booth Paper and Filters

RECEPTOR FILTER

Superior overspray holding capacity results in fewer filter changes. Green layer is made from 100% recycled PET green soda bottles.

1" INTAKE AIR FILTER PAD

Tacky pressure sensitive adhesive filter panel is great for mixing rooms and cross-draft and semi-downdraft spray booths.

2" INTAKE FILTER PAD

Filter removes 100% of visible dust and micron particles. UL Listed, Class 2923X for flammability.

AIR FILTER PAD

Designed to help reduce operating costs and for virtually all spray applied industrial coatings. Biodegradable and can be incinerated. Ideal for adhesives, clear coats, epoxies, fiberglass, sealers, stains, and urethanes. Meets UL Class 2 Standards for Flammability.

GFS WAVE EXHAUST FILTERS

Provide full-depth loading with low runoff and exceptional paint holding capacity. Minimal particulate emissions and high paint removal of all coating types, including clear and waterborne. 6TWA3 comes in a roll. Filter material complies with UL 900, NFPA, and OSHA requirements.

FLAME-RETARDANT FLOOR PAPER

Eliminates scraping, stripping, and scrubbing to improve plant efficiency and assure compliance with OSHA requirements for safe cleaning and residue removal. Antislip surface; bright white color improves booth visibility.

Spray Booth Coatings

- Applies with airless, HVLP, or conventional spray equipment
- Environmentally friendly formula is VOC < 164g/l

Nonflammable, water-based coatings protect against hazardous overspray accumulation. Dries quickly to form a flexible film that can be cleaned of overspray with just soap and water.

Airless Line Stripers

- See striping paints on page 1610

LineLazer 3400—This 1-gun, airless striper is perfect for small parking lots, schools, park and recreation departments, factory safety lines, and re-stripe jobs.

LineLazer 3900—This 2-gun airless striper is ideal for parking lots, roadways, athletic fields, and factory safety lines.

LineLazer 5900—Designed for larger striping jobs such as large parking facilities, roadways, athletic fields, and factory lines.

LineLazer ES—Powered by a high-output battery which allows it to be used safely indoors for factory safety lines as well as jobs where noise is a concern. 53JT70 includes 2 batteries.

High Volume, Low Pressure (HVLP) Sprayers

CS MAX HVLP SPRAYER SYSTEM
- 2-Stage

Variable air pressure control reduces overspray and improves precision.

CAPSPRAY 75
- 3-Stage

Turbine features 25-ft. air hose. Use with stains, lacquers, enamels, and most multicolor coatings.

CAPSPRAY 95
- 4-Stage

Turbine features 30-ft. air hose.

HVLP POWER CART

Features 2½-gal. pressure pot and 30-ft. hose. For long applications use with 2PCX5 and 2PCX1.

Disposable Tank Liner

Straight-sided insert designed to fit a 2.8 gallon spray paint pressure feed tank 2TKN8. Lip snaps over the tank to prevent leakage between the insert and tank.

Description	Item No.
2.8 gal. Disposable Pressure Tank Liner, Pkg. of 10 Linear High Density Polyethelene, 9½"L, 10¹¹⁄₃₂"W, Thickness 0.01 Mil	**5PB40**

Scan. Order. Done.
Details on page A1.

Line Stripers and Accessories

TITAN

Clutch-driven piston line striper. Stainless steel rotating ball valves keep debris from sticking. Feature self-adjusting, 1-pc. static packing with wiper lip for longer life. Subaru gas engines operate quietly and start easily. Carry 5-gal. paint pail (not included). For a complete selection of striping paint, see page 1610.

PowrLiner 850—Unit features a reversible gun mount to stripe off either front or rear tire. Designed with folding handle and poly tires for smooth operation.
- **Max. gpm: 0.33**
- **Max. psi: 3000**

PowrLiner 3500—Delivers a perfect line on difficult applications like smooth concrete and field and pavement marking. No piston or packings, cylinder or clutch to wear or burn out. Features the Sureflo pusher valve that makes priming easy. Perfect for spraying coatings prone to shearing.
- **Max. gpm: 0.92**
- **Max. psi: 3300**
- **Honda motor**

Atomizing Spray Nozzles

No-drip nozzles positively stop liquid flow when the compressed air is shut off, saving costly liquids.

INTERNAL MIX

Mix the liquid and air inside the air cap for the finest atomization. Can be used on liquids with a viscosity up to 300 cp. Both air and liquid side are pressure fed.

EXTERNAL MIX

Designed for the highest flow rates. Allow the air and liquid flows to be adjusted independently. Ideal for where precise liquid flow is needed. Can be used on liquids with a viscosity above 300 cp. Both air and liquid sides are pressure fed.

SIPHON FED

Require no liquid pressure and can be used with gravity fed liquids or lift liquids from a 36-in. siphon height. Can be used on liquids with a viscosity up to 200 cp.

Roof Coatings

Acrylic Roof Coatings are liquid-applied seamless coatings that are sprayed or rolled onto a roof surface. Coatings turn white as they dry and adhere strongly to the areas where they are applied. They work well on pitched or steep-sloped roofs where they reflect sunlight, reducing heat transfer into buildings. These coatings also repel water and moisture for the life of the coating. Acrylic coatings are a short-lifecycle, low-cost roof coating option.

Asphalt Roof Coatings are two-course processes applied to preserve the surface of a roof and it make it durable. Asphalt creates seamless, pliable water-resistant protection and levels irregularities on roof surfaces. The second coating is a protective to coat that repels moisture and UV rays. These coatings can be applied by spray, brush or paint rollers.

Aluminum Coatings help improve buildings' energy efficiency at a lower price than acrylic coatings. These coatings are highly reflective and can lower roof temperatures and repel ultraviolet rays away from the surface.

Silicone Roof Coatings are spray-applied onto a flat roof surface to repair cracks, blisters, and seams. These coatings increase protection from the elements and stop ponding water from seeping into roof substrates and causing leaks. Silicone lasts longer than other roof coatings, standing up to bad weather and high heat throughout its lifecycle.

Roof Accessory Paints are professional-grade roof spray paints that closely match the original color of most roofing materials. They resist fading and protect against rust. For use on fascia, flashing, gutters, soffits, and vent pipes.

Multisurface Rubberized Coatings

Rubberized Liquid Coatings apply to surfaces and then dry to be waterproof barriers.

Rubberized Tape Adhesives produce leakproof membranes and insulation necessary to cover the entire surface of a pipe. They can be used in conjunction with liquid coatings like epoxies to enhance surface protection. Withstands tear and abrasion.

Perma-Patch 3ZC17

GreenPatch 39F847

Asphalt Patch Paving Material

Sakrete—21HC47 is a liquid formula used to fill cracks up to ½" wide. Accepts traffic after 5 days. 39UV47 has a full cure time of 2 days.

Perma-Patch—Patches potholes, utility cuts, and cracks. Bonds permanently to asphalt, concrete, steel, and wood. Apply in any weather condition. No mixing. Dries immediately; cures faster under greater volumes of traffic. Compaction can be accomplished by hand tamping.

GreenPatch—Ready-to-use VOC-compliant formula contains recycled asphalt and permanently repairs potholes and cracks in pavement. Workable in all weather and can be installed in standing water. Accepts traffic immediately after application.

Rust-Oleum—Concrete Patch and Repair is a 2-part, industrial-strength epoxy that permanently bonds concrete, won't shrink or crack, and creates a surface stronger than concrete. For indoor/outdoor use. Fast curing; paintable in 8 hours. Easy mixing, low odor, no solvents.

#1 CHOICE OF PROFESSIONALS

Driveway Asphalt and Coating

Asphalt Resurfacer—Fills and seals rough surfaces and cracks in asphalt driveways. Features a 7x rubberized formulation for long life and durability. Stir gel formula applies easily, dries quickly, and reduces tracking.

E-Z Stir Asphalt Filler/ Sealer—Do-it-yourself, easy-to-use formula stirs and applies easily. Reinforced for improved traction and durability.

Top-Kote Asphalt Coating—Smooths, preserves, and protects weathered asphalt driveways. Renews and gives a black appearance to surfaces.

Asphalt Pothole Patch—Use this solvent-based asphalt and aggregate compound to fill larger cracks and potholes. All-weather formula requires no mixing.

Asphalt Coating—Brush-applied sealcoat is ideal for home use. Stirs and applies easily.

21HC54

Concrete Mixes

SAKRETE

- 50 lb. pail

Formulated with sand, gravel, and cement for repair and building jobs where concrete is more than 2" thick.

21HC53 sets posts and poles easily without blending. Sets in 30 min.

21HC52 includes fibers that help resist cracking due to shrinkage.

21HC54 achieves 5000 psi strength. Also good for use in concrete countertops.

21HC55 is a general purpose concrete mix with a strength of 4000 psi.

Description	Meets	Mfr. Model	Item No.
Fast Setting Concrete Mix	ASTM C-387 and ASTM C-270	120019	**21HC53**

Hard Hat ANSI Classifications

ANSI/ISEA-Z89.1-2014
Describes the impact resistance and electrical insulation properties of the hard hat.

Impact and Electrical Insulation Classifications
Type I: Reduces the force of impact caused by a blow to the top of the head only.
Type II: Reduces the force of impact from a blow to the top or side of the head.

Class C - Conductive: Provides no protection from electrical hazards.
Class G - General: Provides low-voltage protection up to 2.2kV.
Class E - Electrical: Provides high-voltage protection up to 20kV.

Hard Hat Suspension Types

Pinlock
Feature a band with evenly spaced holes on one end and pins on the other end that fasten for a comfortable fit.

Ratchet and Swing-Ratchet
Feature a knob for tightening or loosening the band to customize the fit. Swing-ratchet suspension helmets let the wearer reverse the position of the helmet without removing the suspension frame.

One-Touch and Staz-On
One-Touch have a clip that is squeezed and slid along the band to adjust fit. Staz-On suspension helmets have a band with evenly spaced holes on one end and pins on the other end that fasten to adjust.

Hard Hat and Helmet Suspensions

- Suspension brand and helmet brand must be the same

Suspensions are the part of the hard hat or helmet that rests on the wearer's head. They provide a gap between the headgear and head, which helps absorb shock and redirect impact force away from the head and spine. Suspensions should be replaced yearly as part of normal maintenance and inspection practices, or earlier if the suspension shows signs of wear.

Faceshield Assemblies

Sellstrom. Product that works.

- Meet ANSI Z87.1-2015 standard when headgear or bracket is used in conjunction with proper visor to create complete faceshield
- Assemblies meet CSA Z94.3-07 CUL certified

Polycarbonate visor provides high clarity and is great for heavy-duty impact and heat-resistance applications. Crown/chin guard on 23X909 offers extra side and bottom protection from splashes, dust, and contaminants.

DP4™ Faceshield Assembly 4PE38 combines full-face coverage with shade 5, 6, or 8 flip visor options, eliminating the need to wear 2 protective devices. Provides UV/IR protection during grinding, cutting, and brazing operations.

Cooling Headwear

Keep cool on the job with reusable towels, bandannas, and sweatbands. Just soak in cold water up to 20 min. for instant cooling relief. Activate towels in just a couple minutes—wear on your neck or use for wiping away dirt and sweat. Wear cooling bandannas alone or with protective hard hats. Cellulose sweatband absorbs sweat and helps keep it away from eyes and hands. Brightly colored neck protector can be worn with front or full-brim hard hats to provide shade and visibility.

Noise Reduction Rating (NRR)

Noise Reduction Rating (NRR) is the maximum number of decibels (dB) that a properly fitted hearing protector will reduce noise levels. When choosing the right hearing protection for your application, OSHA suggests subtracting 7 from the NRR value, to help account for improper fit.

Level (db)	Example of Noise Levels
140	Rifle Fired 1 Meter Away
120	Basketball Game Crowd Noise
100	Chainsaw
90	Drilling Concrete, Leaf Blower
80	Vacuum Cleaner
50	Floor Fan

Insertion Method

Roll-Down—Roll-down earplugs must be rolled and compressed by hand before being inserted into the ear canal. Once inserted, the earplug expands to create a seal.

Push-In—As implied by the name, push-in earplugs are inserted into the ear canal with a gentle push. They do not need to be rolled and compressed before insertion.

Banded Ear Plugs

- Reusable band with disposable tips

Ideal for intermittent use when switching between noisy and quiet areas. Less bulky than ear muffs and more convenient than individual ear plugs, they protect hearing where high levels of noise reduction aren't needed. Reusable band holds replaceable tips in place and allows them to be more easily inserted and removed than standard ear plugs. Band can be worn over the head, under the chin, or behind the neck; it can also rest around the neck when plugs aren't in use.

MOLDEX 3M Condor Honeywell HOWARD LEIGHT

Metal-Detectable Ear Plugs

- Disposable; except Flanged and Pod Shape are reusable

Include metallic components that can be sensed by a metal detector. Commonly worn by workers in food manufacturing and pharmaceutical processing plants so that ear plugs lost on the production line can be easily found, to help prevent contamination of products.

Plugs expand within the ear to form a seal that reduces sound levels and helps prevent hearing loss in noisy work environments. Corded to help keep them from falling off, and allow them to rest around your neck when not in use.

Note: For more information on plug shapes, see page 1643.

Metal-Detectable Ear Plug Dispensing System

Convenient all-in-one unit consists of a disposable dispenser, prefilled with a supply of metal-detectable ear plugs. Dispenses ear plugs one or two at a time to minimize waste and supply clean plugs for each user. Throw out the container when empty to eliminate the hassle of refilling. Dispenser must be wall mounted with the included bracket. Once installed, the bracket can be reused with replacement Moldex dispensers.

Passive Ear Muffs

Passively block noise by relying on the insulating materials of the padded ear cups that create a seal around the ears. Typically worn in areas where workers don't need to speak with one another and the goal is to block all or most surrounding noise. Ideal for environments with intermittent noise because they can rest around the neck when not in use. As the NRR increases, ear muffs tend to get bulkier due to the larger ear cups and increased insulation materials.

Impulse Noise Protection Ear Muffs

Electronically filter out constant, loud noise and short bursts of high-volume noise. Electronic hearing protection ear muffs reduce, or attenuate, loud noises while still allowing you to hear ambient sound. Often worn to protect against impulse (or impact) noises such as gunfire or metal stamping, pressing, and forging sounds.

Frameless Safety Glasses

- Meet ANSI Z87.1
- 99.9% UV protection

A. Addison—Has 9-base lenses and provides 180° field of vision. Curved temples with soft tips. Nonslip nosepiece.

B. Brooklyn—Wraparound frame, curved temples with integrated side protection, and universal nosebridge.

C. Chaise Rocks—Nonslip design with bayonet temples and universal nosebridge.

D. Condor V—Features flexible, contoured spatula temples.

E. Condor Mini V—Smaller size eyewear features flexible spatula shield temples.

F. Condor Visitor—Universal size with spatula temples. 4JND6 to 4JND8 are 1-pc. construction, vented style. Fit over most prescription glasses, except 4VCL8 is designed for smaller faces.

G. Enticer—1-pc. wraparound design with cushioned bayonet temples and nosepiece.

H. Jbird—Has 9-base lenses and spatula temples with soft tips. Allows 180° field of vision.

I. Kramer VP—Wraparound design and soft rubber temple ends for a more comfortable fit.

J. Oxulux—Wraparound design with contoured padded temples, nonslip gel pad, and universal nosebridge.

K. Oxulux OTG (Over-the-Glass)—Wraparound design with contoured padded bayonet temples, nonslip gel pad, and universal nosebridge. Universal size. Fits over most prescription glasses.

L. Quest—1-pc. design with adjustable temples and integral brow bridge provides a wide field of vision.

M. Quest OTG (Over-the-Glass)—Extra-large size. 1-pc. design with adjustable temples and integral brow bridge provides a wide field of vision.

N. Persuader—Contoured floating lens improves field of vision. Wraparound frame, bayonet temples with cushioned sleeves, and soft gel nosepiece.

O. Wasko—1-pc. molded frame and lens with padded flexible temples.

P. Wasko Mini—1-pc. molded frame and lens with padded flexible bayonet temples. Small size.

Q. Winger—Integrated side shields and metal alloy temples with nonslip rubber head grips.

Frameless Safety Glasses

- Meet ANSI Z87.1-2015
- Meets CSA Z94.3
- 99.9% UV protection

A. Astro OTG (Over-the-Glass) 3001—Designed to be worn over prescription glasses. Unilens wraparound design features universal nosebridge; cushioned, adjustable temple lengths; and adjustable lens angle.

- Meets Military V_0 Ballistic Test for Impact

B. Falcon—9-base unilens provides coverage with a wide field of vision. Molded-in nosebridge, adjustable temple lengths, and lens angle adjustment.

C. Ignite—Frameless design features 9-base wraparound unilens with adjustable nose-piece and cushioned temples.

- Meets Military V_0 Ballistic Test for Impact

D. Skyper—Wraparound unilens has molded-in nose-bridge and side shields. Adjustable comfort-cushioned temples with adjustable temple lengths and lens angle adjustment.

E. SVP 200 Series—Frameless, low-profile glasses fit most faces and are very lightweight for all-day wear. Wraparound 10-base lenses, molded nosepiece, and comfort-able, flexible temple tips.

F. Ultra-spec 2000—Unilens design is antistatic with built-in side shields, browguard, and adjustable temple lengths.

G. Ultra-spec OTG (Over-the-Glass) 2001—Designed to be worn over prescription glasses. Molded-in side shields, brow-guard, universal nosebridge, and flexible and adjustable temple lengths.

Half-Frame Safety Glasses

Honeywell UVEX

- 99.9% UV protection

A. Acadia—Versatile, sporty, indoor/outdoor wraparound style has sculpted, padded temples and premium integrated hinge mechanisms for fit, comfort, and compliance. Soft ribbed nosepiece is designed to minimize slippage.
- Meet ANSI Z87.1

B. Avatar—Designed for maximum all-day comfort and customizable fit, with indirect venting, ratchet temples, 9-base wraparound, adjustable temple length and lens tilt, and flexible nose pads.
- Meet ANSI Z87.1 and CSA Z94.3

C. Bandit—Wraparound unilens design. Features dual lens with replaceable lenses, adjustable temples, and molded-in side shields.
- Meet ANSI Z81.1

D. Fuse—Wraparound 9-base lenses with adjustable nose pads and soft, flexible temple tips. Includes adjustable, breakaway retainer.
- Meet ANSI Z81.1 and CSA Z94.3

E. Genesis—Dual 9-base wraparound lenses feature a shock-absorbing browguard and a ventilation channel to prevent fogging. Unilens design, flexible nose pads, adjustable temple length, and lens angle adjustment.
- Meet ANSI Z87.1 and CSA Z94.3

F. Genesis S—Same features as Genesis eyewear, but feature a 6% smaller frame for workers with slimmer facial profiles.
- Meet ANSI Z87.1 and CSA Z94.3
- Meet Military V0 Ballistic Test for Impact

G. Genesis X2—Same features as Genesis eyewear,
but with a sportier design and cushioned temples.
- Meet ANSI Z87.1 and CSA Z94.3

H. Genesis XC—Same features as Genesis eyewear, but provide 20% more coverage for extra protection.

I. Mercury—Wraparound dual-lens design offers a 180° field of vision with additional side protection. Soft, flexible nosepiece conforms to almost any nasal profile to reduce slippage while soft, padded temples provide secure, no-slip fit.
- Meet ANSI Z87.1 and CSA Z94.3

J. Millennia—Wraparound dual 9-base unilens design. Feature browguard and built-in side shields for top and side protection. Include adjustable, breakaway retainer.
- Meet ANSI Z87.1 and CSA Z94.3

K. Millennia Sport—Lenses have curved temples and universal nosebridge. Includes adjustable, breakaway retainer.
- Meets ANSI Z87.1 and CSA Z94.3

L. Protégé—Expandable, floating unilens design with wraparound brow, cushioned temples, and a soft, flexible nosepiece.
- Meet ANSI Z87.1 and CSA Z94.3

M. Vapor II—Wraparound frame with 9-base lenses provides 180° field of vision. Universal nosepiece. 4FE55 include adjustable, breakaway retainer.
- Meet ANSI Z87.1 and CSA Z94.3

Full-Frame Safety Glasses

- Meet ANSI Z87.1-2015
- 99.9% UV protection

A. Astrospec 3000—Unilens wraparound design with universal nosebridge, adjustable lens angle, and replaceable lenses.
- Meets CSA Z94.3
- Meets Military V_0 Ballistic Test for Impact

B. Hypershock—Dielectric glasses are nonconductive, making them ideal for applications where accidental exposure to an electrical charge is possible. The full frame design offers high impact protection, with streamlined padded temples and a molded nosepiece for a more secure and comfortable fit. Uvextreme Plus anti-fog lens coating provides you fog-free vision and greater scratch resistance for long life.
- Meet CSA Z94.3-2007

C. Livewire Sealed Eyewear—Foam subframe fits contours around the eyes for a comfortable seal. Padded, flexing temples with lens angle adjustment. Convert for goggle use with the included adjustable cloth headband. Hydrophilic/hydrophobic HydroShield coating technology offers longer-lasting fog-free performance.
- Meets CSA-Z94.3

D. Tomcat—Dual-lens design with metal frame. Adjustable nose pads and flexible padded temple grips.
- Meet CSA Z94.3-2007

E. Ultra-spec 1000—Wraparound design. Uncoated unilens with molded-in side shields, browguard, and universal nosebridge.
- Meets CSA Z94.3

F. Uvex RX Frame Only—Prescription-adaptable, unisex frame features adjustable nose pad bridge, regular hinge, and skull temples. Includes removable dust dam. Style number SW06E. RX lenses are not included.

Honeywell UVEX

Tirade Sealed Safety Glasses

38TJ72

- Met ANSI Z87.1-2010
- Meet CSA Z94.3
- 99.99% UVA/UVB protection

Offer protection in high particulate locations where debris, dirt, and dust present the risk of eye injury. Feature a large unilens design for a wide field of unobstructed peripheral vision, and a soft foam subframe to help ensure a comfortable gap-free fit. The Uvextra anti-fog coating helps keep lenses clear. Indirect ventilation channels on the subframe provide superior dust filtration. The quick-release hinge system converts easily from temples to headband, with removable temples and standard adjustable headband included.

35ZA30

Backdraft—Lightweight, frameless design features soft TPR internal side shields for extra protection from particles or debris. Also include secure, comfortable rubber nose pad and temple sleeves. 35ZA29 and 35ZA31 have superior MAX3 hard lens coating. 35ZA30 and 35ZA32 feature MAX6 coating, with 6 times the antifog properties than traditional coatings.

35ZA42

Pantera—Hypoallergenic foam seal helps protect eyes from dust and debris. Adjustable temple length provides comfortable fit.

35ZA36

Hornet DX—Replaceable vented hypo-allergenic foam gasket surrounds the inside of the lens to protect against impact and airborne debris. Include a removable strap for a secure, goggle-like fit in a lightweight design.

Safety Glasses

- Meet ANSI Z87.1-2015
- 99.9% UV protection

Checklite—Lightweight single-lens glasses are sized to fit smaller faces. Frameless design features colored spatula temples.

- Meet MIL-PRF-31013 military standards
- Meet CAN/CSA Z94.3-16

Bearkat—The one-piece wraparound lens design allows you unobstructed vision and the tight fit can provide greater safety. Lenses have a scratch-resistant Duramass coating and the flexible temples with non-slip soft material offer a comfortable fit. Bearkat 3 models feature a soft, secure gel nosepiece.

- Meet MIL-PRF-31013 military standards, CAN/CSA Z94.3-16; except Bearkat 3 only meet ANSI Z87.1-2015

Rubicon—Curved lens provides distortion-free 180° field of vision. Spring-hinge temples and nonslip temple sleeves.

Klondike Plus—Features adjustable temples, 11° base curve lens, and TPR nosepiece. 5-position ratchet temples.

Swagger—Provides great comfort and excellent seal. Nonslip low-profile bayonet temples are thick and wide for better side protection and a bold modern look. Dual lens design. Soft TPR temple and nose pad material for long-wearing comfort.

- Meet ANSI Z87.1-2015
- 22JJ40 polarized lenses reduce glare

bollé SAFETY

- Meet ANSI Z87.1-2010
- 99.99% UV protection

Select models feature permanent Platinum coating on both sides of the lens to offer high resistance to scratching and aggressive chemicals and help delay fogging.

A. Prism—Durable nonconductive polycarbonate frame, excellent coverage, upper brow protection, comfortable straight temples, and sport-style design.

B. Rush—Wraparound lightweight nonconductive frame and premium optical quality. Design includes upper brow protection, nonslip temples, and adjustable nonslip bridge with silicone nosepiece.

C. Rush+—Ultra-sporty design with a nonslip adjustable bridge and flexible co-injected temples to customize fit. Platinum coating.

D. Contour—Ultra-lightweight half-frame provides panoramic view. Nonslip temple tips, rubber nose pads, and reinforced bridge. Antistatic, stylish design, premium optics.

E. Silium+—Ultra-lightweight for comfort in extended wear, with a nonslip adjustable bridge and straight, highly flexible temples. Platinum coating.

F. Baxter—Highly wrap-around frame for total comfort. Waterproof foam and special strap attachment system offer effective protection against liquid and solid spray, and from dust. Platinum coating.

G. Lowrider—High-contour, close fitting design with rubber temples for a comfortable and nonslip fit. 20V730 has high-impact polarized lenses that provide true color definition while fighting harsh glare.

H. Tracker Sealed Eyewear and RX Holder—A rubberized eye seal keeps out dust and other fine particles, and the adjustable head strap assures a snug fit and optimal protection. Each accept a Prescription Insert Holder.

Safety Glasses

- Meet ANSI/ISEA Z87.1-2015
- Meet Ballistic Military MCEPS GL-PD 10-12
- 99.9% UV protection

Feature advanced lens and frame technologies for greater style and comfort. Copper lens color is best suited for driving applications. Select models have military-grade Vapor Shield antifog lens technology that can resist condensation, fog, and haze even under extreme temperatures and conditions. Glasses with TPR nose pads and temple tips prevent slipping and help keep glasses in place.

A. Delano G2—Stylish, eyewear with a large viewing area features flexible, soft rubber temples for added comfort.

B. Zorge G2—Durable, TR90/nylon frame with soft, rubber temples for comfort.

C. Caraz —Extra-lightweight wraparound frame switches easily between glasses and goggles. A removable EVA foam gasket is attached to the frame to help keep foreign particles away from the eyes. Models featuring polarized lenses can reduce glare in bright light conditions.

D. Dakura—Flexible wraparound frame and soft temples.

E. Kazbek—Flexible, soft-touch nylon wraparound frame. Edge-Flex temples and TPR nose pads. Wide fit glasses feature frames with an additional 22mm width at the temple. Multi-Fit models have an adjustable nosepiece for a more comfortable fit on a variety of facial structures.

F. Reclus—Durable and flexible TR90/nylon frame with soft TPR nose pads and temple tips for greater comfort and durability.

Contemporary design can be worn with detachable temples or with an adjustable headband for all-day comfort. Soft, flexible nasal pads and face cushioning for excellent fit. Suited for dirty, high-particulate work environments such as those where grinding, chipping, shaving and sanding occur. The hydrophilic/hydrophobic HydroShield antifog coating technology on select items offers 90x longer-lasting fog-free performance than most other antifog products. D5296 offers increased magnification for reading, inspection and other fine-detail work.

Safety Glasses/PPE Dispensers

Dispensers accommodate packaged or nonpackaged protective eyewear and other PPE equipment. Wall mount or countertop use. Mounting hardware not included.

Safety Glasses Dispensing Trays—Double-hinged top lid provides easy access and seals out dust. 4GMR6 and 23Z418 have a foam bottom.

Safety Glasses Stack-Style Dispensers—All have an open top for quick filling and a lower flip-up dispensing door in front.

Safety Glasses Case with Door—Flip top hinged lid for filling helps keep dust out. Individual compartments store eyewear.

PPE Wire Dispensing Rack—Wire basket lets workers easily take and return safety glasses and other protective devices. Includes 3 labels: "Safety Glasses," "Hearing Protection," and blank label.

Condor

Goggles

- Meet ANSI Z87.1-2010
- 99.9% UV protection

Offered with direct or indirect venting. Direct-vented goggles let air flow into the goggle from the work environment. Choose indirect-vented to limit or prevent liquid splash passing into the goggle.

A. Condor—Designed for general lab and shop applications. Can be worn with most half-mask respirators. 1VT66 to 1VT68 have perforated sides.

B. Platoon OTG (Over-the-Glass)—Soft vinyl body fits over most prescription eyewear. Translucent light-green frame reduces glare and side reflection. 4VCF4 and 4VCF5 have perforated sides.

C. Max Barron—Foam-lined lenses with adjustable head strap. Black nylon frame.

Goggles

Honeywell UVEX

- Meet ANSI Z87.1-2015
- Meet CSA Z94.3 (except 2CVG2, 2CVG3, and 6T363)
- 99.9% UV protection

Select goggles feature hydrophilic/hydrophobic HydroShield antifog coating technology, which offers 90x longer-lasting fog-free performance than most other antifog products.

A. Classic OTG (Over-the-Glass)—Soft, flexible PVC. Durable construction. Fit over most prescription eyewear.

B. Strategy OTG—Lightweight TPE body with snug fit. Fit over most eyewear to help provide impact protection.

C. Futura OTG—Offer distortion-free 180° field of vision. Fit over most prescription eyewear.

D. Flex Seal OTG—Silicone construction with soft body seal withstands extreme temperatures. Pivoting clips allow positioning on a hard hat or above the ears. Low-profile design fits over most prescription eyewear.

E. Stealth—Soft, flexible elastomer seal conforms to facial contours. Quick-adjust headband clips. Prescription insert holder sold separately.

F. Stealth Reader Goggles—Low-profile, wraparound design with pivoting headband clip and adjustable-slide neoprene headband.

G. Stealth OTG—Pivoting headband clip and wide adjustable-slide headband allow goggles to be used comfortably with hard hats and over most prescription eyewear.

H. Carbonvision—Wide-vision goggles with a soft, flexible body and frame conform to your face for excellent fit.

Respiratory Filter and Gas/Chemical Cartridge Abbreviations

PARTICULATE FILTER TYPES

NIOSH-approved filters are rated as N95, R95, P95, N99, N100, or P100. The number 95, 99, or 100 indicates the filter efficiency percentage rate.

N Series—Used in environments free of oil aerosols.

R Series—Resistant to oil mist. Use is restricted to one 8-hr. work shift.

P Series—Oil-proof with time use restrictions specified by manufacturer.

GAS AND CHEMICAL CARTRIDGE ABBREVIATIONS

AG—Acid Gas
AM—Ammonia
CD—Chlorine Dioxide
CL—Chlorine
FM—Formaldehyde
HC—Hydrogen Chloride
HF—Hydrogen Fluoride

Disposable Particulate Respirators

- NIOSH approved

SAF-T-FIT® Plus—Molded cup design offers low breathing resistance. Convenient suspension straps. Latex-free.

Limited-Use Welding Respirator with Disposable Filter—Low-profile half-mask design fits under welding helmets and faceshields. A proprietary coaxial valve system channels air to the wearer for easy breathing and maximum filtration use.

Disposable Particulate Respirators

- NIOSH approved

Electrostatically charged microfibers are designed for ease of breathing. R and P series respirators may have additional time-use limitations. Refer to instructions for specific information.

A. GENERAL INDUSTRIAL

Provide protection against certain non-oil-based (N series respirators) or oil-based (R and P series respirators) particles.

B. HEALTHCARE/SURGICAL

- Meet CDC guidelines for tuberculosis exposure control
- FDA cleared for use as surgical masks

Reduce exposure to airborne particles generated by electrocautery, laser surgery, and other powered medical instruments. Also reduce the potential exposure of the wearer to blood and other body fluids. Fold-flat mask 49U069 has a 3-panel design to help reduce eyewear fogging. Chin tab provides easy adjustment and positioning.

C. WELDING

Feature adjustable straps (except 4MH67), Cool Flow™ exhalation valve, and cake-resistant filter material (except 4MH67) for comfort and durability.

OV/OZ—Feature a carbon layer that helps provide respiratory protection where metal fumes may be present including those with ozone and nuisance level organic vapors.

D. ODOR-REMOVING

AG—Suggested for protection against particles where nuisance-level (levels beneath OSHA PEL) acid gases may also be present such as primary aluminum smelting, chemical processing, glass etching, and paper processing.

OV—Use in foundries, undercoating, petroleum operations, and agriculture where exposures may include nuisance-level (levels beneath OSHA PEL) concentrations of organic vapors.

E. 100 LEVEL

Use where certain OSHA substance-specific regulations require 100 level respirator for particle exposures to lead, cadmium, arsenic, or methylene-dianiline (MDA). Excludes asbestos.

MOLDEX Ideas that wear well.

Disposable Particulate Respirators

- NIOSH approved

Dura-Mesh® shell resists collapse, even under hot and humid conditions. Contour-molded nosebridge has a foam cushion for an easy soft, comfortable seal without a metal nose band.

A. Standard 2-Strap—Elastic straps are attached securely so they don't break the seal.

1DLL7, 1DLN1, and 1DLP3 feature a low-profile design with a lower, wider nosebridge. FastFit® 6DMW8 offers flat-fold convenience with cup-shape comfort. Individually packaged for hygiene in a dispenser box.

B. Adjustable Cloth Straps—Tug-to-fit adjustable cloth straps provide speedy, comfortable fit. 3NML1 has a low-profile design to fit easily under welding hoods.

C. and D. AirWave®—FlexFit® design expands and contracts as you move and speak for all-day comfort. Wave design lets more air flow in and out for easier breathing. SmartStrap® models with adjustable soft cloth strap allows the respirator to hang loosely from the neck when not in use.

E. HandyStrap®—Cloth strap with buckle allows mask to hang around the wearer's neck, always ready for use.

F. Healthcare and Surgical Masks—Meet CDC guidelines for tuberculosis protection. 2 latex-free straps—on the 1500 series they are color-coded by size.

FastFit® 6DMW9 opens quickly and seals easily, and handily refolds to store in a scrubs pocket. Hygienic individual packaging in a quick-access dispenser box.

Half- and Full-Facepiece Respirators

MOLDEX Ideas that wear well.

User-friendly reusable respirators are designed for comfort and convenience, with a wide field of vision and fewer parts for simplified maintenance. Filters and cartridges are sold separately.

7000 and 7800 Series Half-Facepiece—Lightweight respirators with extra-wide sealing flange and compact design fits well under welding helmets and with safety glasses. The premium 7800 Series offers higher heat and compression resistance with enhanced comfort and durability.

9000 Series Full-Facepiece—Streamlined, ultra-lightweight respirators feature a ratchet fastening strap system and standaway head harness for easy, quick removal. The frameless mask has an extra-wide lens for extended field of view.

9000 Series Full-Facepiece Accessories—Spectacle Kit lets you use prescription lenses (not included) with the respirator. Lens Covers help protect lenses from scratching and overspray.

Half- and Full-Facepiece Respirators

3M

- NIOSH approved

Cartridges and filters sold separately. Fit test kits sold separately, see page 1686.

6000 SERIES

Soft, lightweight facepiece with easily adjustable head strap offers increased comfort. Full-facepiece models feature a large lens that provides a wide field of view.

6500 SERIES

Adjustable head harnesses provide excellent fit and comfort over long shifts. The Cool Flow™ valve helps reduce heat and moisture, for better comfort and easier breathing. With a light, comfortable silicone face seal. Models with Quick Latch mechanism permit easy on and off; no need to remove your hard hat or faceshield as you move in and out of contaminated areas.

FF-400 SERIES

Feature a soft silicone nose cup and large lens that allow for superior peripheral vision. Unique 3M™ Scotchgard™ protector helps the lens resist dirt, paint, and stains and makes it easier to clean. 3M™ Cool Flow™ exhalation valve reduces heat and moisture buildup inside the facepiece.

7000 SERIES

Soft, pliable facepiece and adjustable head strap for maximum comfort. Half-facepiece respirators are easily adjustable and feature Cool Flow™ exhalation valve. Full-facepiece respirators feature standard nose cup to prevent fogging, double-flap face seal, and an antiscratch polycarbonate lens for greater durability.

AIR REGULATOR ASSEMBLY

Use with 6000, FF-400, and 7000 series facepieces and supplied air hose to have respirators in supplied air mode. Kit includes waist belt, air control valve, and breathing tube.

ACCESSORIES FOR FULL-FACEPIECE RESPIRATORS

Spectacle Kits—Allow prescription eyewear to be worn with respirator.

Lens Covers—Protect lenses from soil or damage.

Advantage® Half- and Full-Facepiece Respirators

- NIOSH approved

Cartridges and filters sold separately. Fit test kits available; see page 1686.

200 LS Half-Facepiece—Soft, light, and comfortable. Sealing surface conforms to wearer.

420 Half-Facepiece—Allow quick adjustment for stable, comfortable fit. Adapt to a variety of head sizes and facial contours. Switch easily between lock-down and drop-down modes.

420 Half-Facepiece with Threaded Cartridge Adapters—1-pc. headband and harness assembly eliminates pressure points; form-fitting neck buckles and wide straps provide a comfortable fit. Face seal adapts to facial contours. Adjustable crown strap and quick, easy switch between lock-down and drop-down modes for flexibility. Include 2 cartridge adapters for use with Comfo® threaded cartridges, available on Grainger.com®.

3200 Full-Facepiece—Soft facepiece with rubber head harness and adjustable straps. Respirators feature antiscratch polycarbonate wraparound lens and nose cup.

4200 Twin-Port Full-Facepiece—Dedicated twin-cartridge respirators with adaptable bayonet cartridge adapters mounted onto the lens. Rubber head harness. In-turned lip provides ideal face seal.

4200 Respirator RD40 Adapter—Converts the 4200 full-facepiece respirator for applications including supplied air respirators, powered air-purifying respirators (PAPRs), and gas mask configurations.

3200 and 4200 Accessories—Spectacle kit allows prescription eyewear to be worn with respirator. Lens covers protect lenses from soil or damage.

Half- and Full-Facepiece Respirators

- NIOSH approved

Cartridges and filters sold separately. Fit test kits available; see page 1686.

HALF-FACEPIECE RESPIRATORS

5500 Series—Comfortable, low-profile design in latex-free materials is an economical choice for subcontractors, plant guests, and occasional users.

7700 Series—Medical-grade silicone half mask with a dual flange provides complete face-to-mask sealing and all day comfort.

RU8500 Series—Features a speech diaphragm that provides vocal clarity and aids in communication.

RU8800 Series—Has a triple flange that provides 3 surface areas to seal mask to the face. Designed to fit the widest range of facial types with silicone construction for all day comfort.

FULL-FACEPIECE RESPIRATORS

5400 Series—Economical models feature a 200° field of vision. Support APR, PAPR, and CF-SAR configurations.

RU6500 Series—Soft, durable silicone seal for all day comfort. Models feature the most configurations for APR, PAPR, and CF-SAR using either the center port or side ports.

7600 Series—Medical-grade silicone sealing surfaces and a speech diaphragm that allows clear communication. Antiscratch polycarbonate lens provides a 200° field of vision and a downward view for sight in all directions. Support APR, PAPR and CF-SAR configurations.

7600 Series Welding—The welding shield can be flipped up or removed when not welding. 2" x 4¼" shade plates not included.

FACEPIECE ACCESSORIES

Backpack Adapter—Backpack relocates APR cartridges to wearer's back to accommodate welding faceshields, or to move cartridges away from paint spray to help extend cartridge life. Converts half- (5500, 7700, RU8500, or RU8800 series) to a backpack-style respirator and helps minimize weight on the facepiece.

Welding Attachment—Converts 5400 and 7600 Series full-facepiece respirators to a welding respirator. Uses standard 2" x 4¼" welding lens, sold separately.

Spectacle Insert Kits—Metal spectacle frame with support wire accommodates personal prescription lenses (not included) that are fitted to the frame.

Honeywell NORTH

Primair® 700 Series Powered Air-Purifying Respirator (PAPR)

449N06

Features 3-speed airflow for more comfortable use in manufacturing, pharmaceutical, and hospital lab applications. The illuminated keypad has large buttons you can operate even when wearing gloves. The battery and blower motor are integrated into an ergonomic belt that distributes the weight for a more comfortable fit. Filter locks into place with just a ¼ turn to help ensure a tight and secure connection.

Description	Includes	Mfr. Model	Item No.
PAPR System	Battery, Battery Charger, Blower, Comfort Pad, Free Starter Kit, Nylon Belt	PA701HE	**449N06**
Straight Breathing Tube	Breathing Tube, Loose Fit	PA031	**449N07**

More Headgear Choices

Personnel who already have fit-tested North® Honeywell® headgear can adapt it to a CA200 PAPR system—all it takes is a breathing tube and cartridge. This lets the wearer keep familiar gear and helps reduce the complexity of respiratory protection compliance. See page 1674 for NIOSH-approved half- and full-facepiece respirators.

Honeywell NORTH

CA200 Series Powered Air-Purifying Respirator (PAPR) Assembly Kits

- NIOSH approved

Assemblies feature a triple-alarm system with audible, vibratory, and visual alerts that warn the wearer when there are blocked or clogged filters and at 5% and 10% battery life remaining. Airflow automatically adjusts to meet OSHA and CSA cfm requirements. Each kit includes a blower, Li-ion battery, belt (standard or decon), single-unit charger, flow meter, and carrying case. Require breathing tube, headgear, and cartridges, sold separately.

Note: Personnel who already have fit-tested Honeywell® North® tight fitting facepieces can adapt it to a CA200 PAPR system—all it takes is a breathing tube and cartridge. This lets the wearer use a common facepiece and helps reduce the complexity of respiratory protection compliance. See page 1674 for NIOSH-approved tight fitting facepieces (ie. half- and full-facepiece respirators).

32HD64

- NIOSH approved
- Meet ANSI Z89.1 Type I Class G for head protection, Z87.1+ for faceshield/eye protection

Helmets provide all-in-1 head, eye, face, and respiratory protection. A lightweight, battery-driven positive-pressure PAPR is integrated in the helmet, eliminating waist belts and trailing hoses or leads. Electronic systems management (ESM) features a heads-up display and visual and audible alarm for airflow and filter and battery life. Flow rate adjusts to 7.6 or 8.2 cfm.

Pureweld® Powered Air-Purifying Respirator (PAPR) System

32HD66

- NIOSH approved
- Meets ANSI Z89.1 Type 1 Class G for head protection, Z87.1+ for faceshield/eye protection

All-in-1 welding helmet provides head, eye, face, and respiratory protection. The helmet has an integrated lightweight, battery-driven positive-pressure PAPR, which eliminates waist belts and trailing hoses or leads. A heads-up display and visual and audible alarm for air flow and filter and battery life are provided by the electronic systems management (ESM) feature. Flow rate adjusts to 7.6 or 8.2 cfm. The system can function as a fracking respirator to help protect oil and gas workers against inhaling silica dust. The welding window flips up for easy visibility and conversation through a clear inner visor. Choose fixed or autodarkening filter. Includes neck cape, HE filter, battery pack, and charger.

EZ Air and EZ Air Pro PAPRs

- NIOSH approved
- Meet ANSI Z89.1 Type I Class G for head protection, Z87.1+ for faceshield/eye protection

Complete particulate system for industrial applications offers combined respiratory, eye, and face protection against hazardous airborne contaminants and flying debris. Include downtube with FR cover, blower, HE filter, waist belt, battery, charger, and storage bag. Batteries provide up to 8 hr. use per full charge, 5 hr. full recharge time.

EZ Air—Motorized, lithium-ion battery operated system provides constant supply of fresh, filtered air over user's face. Large helmet design accommodates safety glasses under faceshield. Has airduct headgear assembly and flow tester, and features audible, visual, and vibration alarms. Waist belt is lightweight and adjustable. Rechargeable battery.

EZ Air Pro—Designed with superb balance, no fit testing required. Helmets are interchangeable with supplied air respirators and be converted. Ergonomically and lightweight waist pack has low profile style and holds NiMH battery pack.

Adflo™ Powered Air-Purifying Respirator (PAPR) Systems for Welding

- NIOSH approved
- Facepieces meet ANSI Z87.1-2010 for high impact

Headgear combines hard hat, welding filter, and positive-pressure airflow to help wearer be productive and comfortable while welding or grinding.

The lightweight, compact blower offers continuous filtered air for protection against particles and certain gases. Its slim profile fits into tight places.

The Speedglas™ filter provides superior optical performance. Speedglas™ headgear's auto-darkening feature allows sight at comfortable light levels, with constant eye and face protection.

Systems include a high-efficiency particulate filter, wide leather belt, lithium-ion battery, storage bag, and starter kit.

With 9100-Air Headgear—Lighter and more stable than other systems, this features an adjustable head suspension and a more balanced design. Provides more protection to the ears and sides of the neck. The smooth up-and-down pivot design can lock shield in a raised position.

With 9100FX-Air Headgear—Innovative flip-up pivot design allows easy transition from welding to grinding modes for greater welding flexibility. Clear, wide-view grinding visor offers an enhanced field of view.

With 9100MP Headgear—Provides 5 levels of welder protection in 1 comfortable and easy-to-use system. Compact and lightweight design helps protect the eyes, face, head, hearing, and respiratory system. Also provides overhead protection, increased peripheral vision, and superior optical quality.

- Meets ANSI Z89.1-2009 requirements for Type I Class G hard hats

Speedglas™ Auto Darkening Filters (ADF) and Magnification Plates—Filters feature a built-in magnification plate holder and 7 selectable dark shades, plus the capability to lock in a shade for plasma and torch cutting. They also have a shade 3 grinding mode and tack welding mode to help reduce eye fatigue during tacking applications. Can be used in TIG applications on settings as low as 1A.

Sentinel XL™ CBRN PAPR System

- NIOSH approved
- Latex-free

Capacity-2-rated loose-fitting PAPR provides first receivers and other first responders with chemical and biological protection. The butyl hood assembly has a lay-flat design for easy storage; it has a field-replaceable antimicrobial head strap, superior optics, and taped seams. The rugged, dual-chamber blower delivers high flow rates. With an audible/visual low voltage alarm. The system includes a Quick Loc™ waist belt, flow meter, 3 CBRN cartridges, and nonrechargeable battery.

Supplied Air System Components

Easily build a supplied air respirator system. Just choose headgear, a breathing tube, and an air source that fits your needs.

Note: Headgear, breathing tube, air control valve, and compressed air supply hoses are required parts of a NIOSH-approved system.

HEADGEAR AND ACCESSORIES

Versaflo™ M- and S-Series Headgear and Accessories—Compact, lightweight, and easy to maintain while helping protect the wearer from a range of hazards. Versatility, comfort, and ease of use make this headgear suitable for a variety of applications.

H-Series Hood and Accessories—Can be easily worn with limited facial hair or eyewear.

- Hood assembly meets ANSI Class 1, Class E requirements for industrial headgear

SUPPLIED AIR CONTROL, HOSES, AND FILTRATION

V-Series Air Control Devices—The devices are designed to provide a continuous air flow. For enhanced wearer comfort, 4YG10 (cool) and 1CGB7 (warm) allow the compressed air supply temperature to be adjusted up to 50°F.

Supplied Air Hoses—Combine up to 3 high-pressure hoses in any combination not to exceed 300 ft. Low-pressure hoses can only be used in single increments of 50 or 100 ft.

Compressed Air Filter and Regulating Panel—Helps filter and regulate compressed air.

SAR Headgear and Components

SAR HEADGEAR

Disposable Airline Hoods—Feature 1-pc. design with fully integrated breathing tube and head suspension. Hood adjusts easily with hook-and-loop closure and has an absorbent foam headband.

3WXJ7 and 11V243 are splash-resistant and seal in air flow. 3WXK2 laminated fabric with heat-sealed seams is made to offer zero permeability to air and moisture, and provide total protection against hazardous materials.

- NIOSH approved

Full-Facepiece Respirator and Helmets—Full-Facepiece Respirator is designed for high-pressure (150 psig) SAR systems, with a double-sealing flange for close fit. Adjustable belt holds the air flow valve and over-the-shoulder hose out of the way. High-impact, antifog, distortion-free polycarbonate lens.

Low-profile, lightweight Economy Air Shield Helmet has a quick-release suspension, flip-up visor, headband ratchet assembly, cotton neck shroud, and chin guard. The high-impact, antifog polycarbonate lens with antiscratch coating provides a wide field of distortion-free vision.

Deluxe models provide head, eye, face, and respiratory protection against hazardous airborne contaminants and flying debris in demanding industrial environments. Feature fire-retardant, coated fabric neck cape. Air Shield and Welding Helmet is made of glass-filled nylon with a variable-shade autodarkening lens, shade 9-13, good for all welding processes including TIG and TIG pulsing.

- Economy model meets ANSI Z87.1-2003
- Deluxe models meet ANSI Z89.1 Type 1 Class G for head protection, Z87.1+ for faceshield/eye protection

SAR COMPONENTS

Air Flow Control Devices—Low Pressure Flow Adapter allows an LP SAR hood to connect to an ambient air pump or low-pressure air source. OBAC quick-connect design with belt and clip assembly.

High-Pressure controllers are for use with high-pressure SARs. Their low-profile design won't get in the way. Each has Hansen fittings with belt and clip assembly. Personal Air Cooler adjusts air flow up to 25° cooler than ambient. Air Temperature Controller adjusts air 25° warmer or cooler than ambient, and includes a leather sheath for protection from temperature extremes. Adjustable Flow Control Valve changes air flow for greater comfort.

Air Supply Hoses—Use low-pressure hoses with ambient air compressors and high-pressure hoses with supplied-air compressors.

Filtration Panels—3-stage filtration system removes water, oil, and particulate contaminants, and provides alerts for high levels of CO. Include pressure regulator with gauge, pressure relief valve, case and stand.

- Meet NIOSH requirements

SAR Respirator Assemblies and Components

SUPPLIED AIR RESPIRATORY (SAR) HEADGEAR

CC20 Respirator Hoods—Hoods deliver continuous airflow and protect face, head, and neck. Provide excellent peripheral vision through 6" x 17" facepiece.

Note: To build a complete Bullard® supplied air system, choose 1 each from the following groups: respirator hoods and breathing tube assemblies for use with a breathing air compressor or free-air ambient pump.

88VX Abrasive Blasting Helmet Respirator Assembly—Respirator has a lightweight inner shell with an adjustable headband and wide-angle facepiece. Assembly includes a helmet, cape, ¼" industrial interchange fittings, breathing tube, airflow control, belt, inner/outer lens, and 5 Mylar® lens covers.

- NIOSH approved
- Facepiece meets ANSI/ISEA Z87.1-2010
- Head protection meets ANSI/ISEA Z89.1-2014

Note: For use with breathing air compressors.

BREATHING TUBE ASSEMBLIES

Control the flow of air into the respirator.

SUPPLIED AIR RESPIRATORY (SAR) COMPONENTS

Climate Control Tube—Control the temperature of air delivered to the respirator.

Air Supply Hoses—For use with breathing air compressors and have ⅜" I.D. Starter hose has ¼" female coupler and ¼" male fitting. Air supply hose for use with free-air ambient pumps. Hose has ½" female coupler and ½" male fitting.

41 Series Airline Filter—7-stage filtration system with 6 layers of filtration to remove water, oil, odors, and particulates. Includes 2 outlets with pressure gauge, relief valve, and pressure regulator. Can be used with other compressor safeguards to provide clean air to airline respirators.

CO Monitor—Displays the CO concentration with audible alarm when high CO levels are present. Includes remote alarm connection devices and connection kit for Airline Filter 6AM36 and any compressed breathing air source.

- Operates on 110/220VAC or 12VDC

Grade-D Breathing Air Filtration and CO Monitors—Portable Clean Air Box (CAB) system provides 3-stage filtration and carbon monoxide (CO) monitoring. Filters remove oil, water, particulates, oil vapor, and odors. Independent regulators provide proper airflow to each user. CO monitor features remote-capable, high-intensity 90dB alarm with strobe; internal and external visual display; and 90-sec. auto calibration. Powered by 110VAC or 8 AA batteries. Housed in a rugged polycarbonate Pelican® case that withstands harsh work environments.

Portable Ambient Air Compressors

Portable Free-Air® pumps can quickly and easily supply breathable air. Transfer ambient air from a clean air location to a supplied air respirator.

3AM92 and 6AH13 feature Carbofine outlet filter. Medium-efficiency inlet filter keeps particulates larger than 25 microns out of the air supply. Monitors, calibrators, and airline filters are not required.

38NF68 includes wheel kit, roll cage, inlet filters, and pressure gauge.

Supplied Air Respiratory (SAR) Packaged Systems and Airline Assemblies

Honeywell NORTH

- NIOSH approved

SAR Packaged Systems—Kits include everything needed to set up an airline system. The rotary vane air pump supplies breathable air from a clean-air environment. Breathing tube for all systems is located behind the back to keep it out of the way.

Packages with facepiece respirators include one or two Honeywell North 7600 full-facepiece or 7700 half-facepiece mask(s) made of 100% silicone. Packages with hood respirators include a Primair™ 100 Series hood with cotton neck seal for comfort; great for users with facial hair or when fit testing is not practical.

1-person systems have a ¾-HP pump and 50-ft. breathing hose. 2-person systems have a 1½-HP pump and 2 50-ft. breathing hoses.

Supplied Airline Assemblies—16M255 converts Honeywell North full-facepiece respirators (7600, RU6500, 5400) or half-facepiece respirators (7700, RU8500, 5500) into a SAR through the cartridge connection port; expanding the use of existing respirators helps eliminate additional fit test requirements.

16M253 and 16M254 are compatible with all Primair™ series hoods. 16M254 includes a PVC belt for easy decon cleaning.

AIR SHIELD SARS

Provide clean, continuous air flow for personal protection. Low-profile, lightweight air shield/helmet has quick-release suspension and antifog polycarbonate lens. Each system includes shield/helmet(s), ambient air pump, and 50-ft. breathing hose. 1-person systems have a ¾-HP pump and 1 shield. 2-person systems have a 1½-HP pump and 2 shields. Models with welding helmet have an autodarkening filter good for all welding processes including TIG and TIG pulsing.

Economy—Offer protection in body repair, chipping, grinding, and spray painting applications. Replaceable high-impact lens with antiscratch coating provides a wide field of distortion-free vision. Feature flip-up visor, headband ratchet assembly, cotton neck shroud, and chin guard. Welding helmets are made of thermoplastic resin with a shade 10 polycarbonate plate.

- Meet ANSI Z87.1-2003

Deluxe—Provide head, eye, face, and respiratory protection against hazardous airborne contaminants and flying debris in demanding industrial manufacturing environments. Feature fire-retardant, coated fabric neck cape. Welding helmets are made of glass-filled nylon with a variable-shade autodarkening lens, shade 9-13.

- Meet ANSI Z89.1 Type 1 Class G for head protection, Z87.1+ for faceshield/eye protection

ABRASIVE BLAST HELMET SAR

- Facepiece meets ANSI Z87.1

Nova 2000™ helmet features large wraparound lens for optimal vision and sound-deadening foam padding. System provides a portable air source with even air flow for 1 user and includes helmet, ¾-HP pump, and 50-ft. air hose.

About Gloves and Glove Sizing

ABOUT DISPOSABLE GLOVES

Disposable gloves create a barrier to keep hands clean and protected, while keeping oils and dirt on the hands from transferring to objects being handled. Intended for single use, they are typically thrown away after each task. Thinner gloves offer higher dexterity and better touch sensitivity, while thicker gloves offer more protection for hands and bettter durability. Texturing helps to improve grip, especially when handling wet or slippery items.

Powdered gloves have a light coating of powder inside the glove to help absorb moisture and make it easier to don or remove gloves. Powder-free gloves reduce the risk of particulate cross-contamination.

Acceptable quality level (AQL) is a numeric rating of a glove's barrier quality. The lower the number, the less chance that gloves will have pinholes or imperfections, providing increased worker safety. An AQL of 1.5 is a common choice for general healthcare applications while AQLs lower than 1.0 are preferred for laboratory work.

GLOVE SIZING CHART

To determine glove size, measure the the distance around the palm of the hand at the knuckles. Look up the measurement (in inches) in the chart to determine the corresponding size.

Palm Size (in):	6 to 7	7 to 8	8 to 9	9 to 10	10 to 11	11 to 12
Size:	XS	S	M	L	XL	2XL
Other Sizes:	Women's		Men's			
			Universal			
			One Size Fits Most			
					Jumbo	

Disposable Glove Materials

Nitrile gloves are latex-free and provide high resistance to puncture, tearing, and abrasion, as well as good chemical resistance. They are generally thinner and more tactile than vinyl gloves.

Natural rubber latex gloves provide high elasticity and dexterity, exceptional grip in wet and dry applications, and good resistance against rips and tears. They can cause allergic reactions in some people.

Neoprene gloves are resistant to chemical splash, provide a good grip when wet, and stay flexible across a range of temperatures. They are more comfortable than nitrile gloves and less comfortable than latex and polyisoprene.

Vinyl gloves are latex-free and are generally for frequent, short-term use in everyday applications. They have a looser fit and provide less protection against chemicals, tears, and abrasion than latex gloves.

Polyisoprene gloves are formfitting and have high tactile sensitivity, making them a good choice for picking up small items. They are latex-free and resist tears, punctures, and abrasion.

Polyethylene gloves (sometimes called sandwich gloves) are made of thin, clear, lightweight plastic and are intended for frequent, short-term use.

J4950

D1805

General Purpose Disposable Gloves

Use for everyday tasks such as inspection, cleaning, handling parts, and general maintenance tasks. Offer excellent dexterity and sensitivity while protecting hands and objects from contamination. D1814 features a thin flocked lining that absorbs moisture to keep hands dry and comfortable.

G6631

D1641

Electrostatic Dissipative (ESD) Gloves

Made of conductive fibers to prevent the buildup of static electricity that can damage sensitive electronic equipment. Use for electrical component assembly, and in telecommunication and electronics industry applications.

G6631 are uncoated for better dexterity and breathability.

G6632 have a polyurethane coating to provide a firmer grip.

D1641 have a polyurethane coating on palms and fingertips. Copper-based Thunderon liner.

F0634 have a nitrile foam coating for abrasion resistance as well as an antimicrobial liner and coating.

Chemical-Resistant Glove Materials

Chemical-resistant gloves are made from a wide variety of rubber polymers with different levels of resistance to chemicals, oils, and hazardous liquids. Choose your glove material based on the chemical or liquid exposure in your application.

Butyl has a high permeation resistance to gases and water vapors and provides heavy chemical resistance to esters, ketones, and acids. Butyl is very elastic and remains flexible at low temperatures.

Butyl/Viton is soft, flexible, and provides excellent protection against aggressive chemicals, such as hydrocarbons and concentrated mineral acids.

Natural rubber latex provides good resistance to some acids, alcohols, caustics, and detergents; but poor resistance to oils, greases, hydrocarbons, and organic solvents. Latex has high elasticity and dexterity, exceptional grip in wet and dry applications, and good resistance against rips and tears. It can cause allergic reactions in some people.

Natural rubber latex/neoprene provides good resistance to a variety of oils, acids, and alcohols. It is heat-resistant, strong, and highly flexible and elastic.

Neoprene is a synthetic rubber that resists a variety of substances including oils, acids, alcohols, fats, ketones, solvents, greases, and petrochemicals. It is flexible and provides excellent tensile strength and heat resistance.

Nitrile resists oils, grease, hydrocarbons, and animal fats, as well as punctures and abrasion. It has good resistance to acids, some organic solvents, pesticides, and fuel.

PVA (polyvinyl alcohol) is impermeable to gases and has excellent resistance to aromatic and chlorinated solvents. It has no resistance to water or water-based solutions.

PVC (polyvinylchloride) is abrasion-resistant and provides excellent resistance to acids, fats, and petroleum hydrocarbons. It remains flexible at a wide range of temperatures and can be used at low temperatures such as those encountered when working outdoors with refrigerated items.

PVC/nitrile provides a liquid-resistant barrier and excellent resistance to most chemicals and oils. It generally provides better resistance to solvents and abrasion than PVC alone.

Supported vs. Unsupported Gloves

Supported gloves incorporate the liner into the glove for better durability than unsupported gloves. They are a good choice for tasks when gloves are fully submerged in liquid.

Unsupported gloves have a good sense of touch but are less durable than supported gloves. They are a good choice when gloves come into contact with chemicals but are not fully submerged.

EN ISO 374 Types and Chemicals Tested

CLASSIFICATION TYPES

According to their permeation performance, chemical-resistant gloves are classified into three types.

Type A gloves have been tested against at least six chemicals listed in the standard and were found to meet level 2 for those chemicals. Level 2 indicates a breakthrough time of no less than 30 minutes against the tested chemicals.

Type B gloves have been tested against at least three chemicals listed in the standard and were found to meet level 2 for those chemicals. Level 2 indicates a breakthrough time of no less than 30 minutes against the tested chemicals.

Type C gloves have been tested against at least one chemical listed in the standard and were found to meet level 1 for those chemicals. Level 1 indicates a breakthrough time of no less than 10 minutes against the tested chemicals.

CHEMICALS TESTED

A - Methanol
B - Acetone
C - Acetonitrile
D - Dichloromethane
E - Carbon Disulphide
F - Toluene
G - Diethylamine
H - Tetrahydrofuran
I - Ethyl Acetate
J - n-Heptane
K - Sodium Hydroxide 40%
L - Sulphuric Acid 96%
M - Nitric Acid 65%
N - Acetic Acid 99%
O - Ammonium Hydroxide 25%
P - Hydrogen Peroxide 30%
S - Hydrofluoric Acid 40%
T - Formaldehyde 37%

Cut and Abrasion Resistance Classification for Hand and Arm Protection

ANSI/ISEA are the American National Standards Institute and International Safety Equipment Association. The ANSI Cut and Abrasion Resistance tables shown here are provided by ANSI and help identify the level of resistance provided by a material, enabling compliance with OSHA regulations 1910.138 (a) and 1910.138 (b), mitigating risk of injury, and increasing worker productivity.

Cut-resistant gloves protect hands from direct contact with sharp edges such as glass, metal, ceramics, and other materials. Cut resistance is a function of a glove's material construction. High-performing fabrics add cut protection without adding thickness. The ANSI/ISEA 105-2016 standard provides a consistent scale for manufacturers to rate their products in each of the designated areas based on standardized test methods.

Abrasion level indicates the wear resistance properties of a material. This test method provides a comparative ranking of material performance, which can be used as an indication of relative end-use performance. Glove coatings improve abrasion level over uncoated gloves.

Updated ANSI/ISEA Classification Levels for Cut Resistance

ANSI/ISEA 105 (2016)		ANSI/ISEA 105 (2005)	
New Cut Level Rating	Weight (grams) needed to cut through material** when tested with new test method designation ASTM F2992/F2992M-15	Old Cut Level Rating	Weight (grams) needed to cut through material* when tested in accordance with ASTM F1790-97 or F1790-05

Cut-Resistant Gloves for Food Processing Environments

- Dyneema lining
- Sold individually

Gloves are designed for comfort and dexterity while using knives, blades, and utensils in food processing applications. Dyneema polyethylene fibers used to construct gloves are superstrong, lightweight, and extremely moisture/UV/chemical resistant.

SafeKnit—High-strength fibers offer superior comfort and flexibility and a high level of cut resistance in heavy-duty applications. Ambidextrous.

PolarBear—G9435 and G9436 lightweight knit gloves provide comfortable protection for wearers working with sharp blades.

G9432 PolarBear Supreme gloves employ a blend of fibers and advanced knitting method to incorporate strands of stainless steel for extremely high cut protection.

- FDA compliant for food handling

PawGuard—Medium-duty glove provides a close, comfortable fit and the cut protection of a heavyweight glove. Good for most knife-hand and some off-hand applications.

- FDA compliant for food handling

VersaTouch—Knitted variable-stitch design adjusts to the shape of the hand to reduce fatigue and enhance cut protection. Exclusive materials manage moisture and hand temperature in hot and cold environments for high levels of comfort as well as cut protection. Designed with Dyneema Diamond Technology to deliver excellent dexterity.

Chainmail Cut-Resistant Gloves

- Stainless steel
- Ambidextrous
- Sold individually

Protect against extreme cut hazards in applications such as food preparation, butchering operations, and knife sharpening and cleaning. Puncture-resistant stainless steel mesh can be sanitized to eliminate the growth of bacteria. Cuffs are color-coded by size, for easy identification.

Condor gloves have a nylon strap at the wrist to securely hold glove.

Niroflex gloves have a stainless steel cuff with a stainless steel clip closure.

Cut-Resistant Palm-Coated Gloves Condor

- For dry and light oil applications

COATING MATERIALS

Coated gloves boost job performance by enhancing grip, particularly on slippery surfaces.

Natural Rubber Latex—A natural material with elasticity that resists cuts, punctures, and slashes.

Nitrile—Protects against petroleum, acids, and solvents, and resists snags, punctures, abrasion, and cuts.

Polyurethane—Allows tactile sensitivity and helps protect hands from harmful residue and chemicals.

LINING MATERIALS

Provide high level of hand protection.

Polyester—Cost-effective, durable material wicks moisture away from the skin. Well-suited for a wide range of demanding applications.

Kelvar—Aramid fiber offers cut and heat resistance good for automotive, sheet metal, and glass handling tasks.

HPPE—High performance polyethylene material offers cut, puncture, and abrasion resistance in carpentry and joining tasks and when handling ceramics, glass, and plastics.

ActivArmr Cut-Resistant Coated Gloves

Ansell

- For dry and light oil environments

Lightweight, proprietary knits and snug-fitting designs deliver breathable, second-skin dexterity for all-day protection.

Cold Weather High-Visibility—2-ply design provides superior protection from the elements. Soft acrylic terry layer keeps hands warm in cold conditions. Bright orange liner offers extra visibility, and contrasting black ¾ double-dipped, sandy-finish coating provides excellent grip.

Multipurpose Medium-Duty—Reinforced palm ridges and a layer of Kevlar withstand harsh abrasion and cuts and deliver excellent dexterity and precision while working with rough materials and power tools. Adjustable pull-tab wrist with ID nameplate.

Medium-Duty Hi-Viz—Highly visible bright orange liner and coating has a reflective logo to stand out in low light. Features Ansell Grip Technology to help wearers retain their grip on wet or oily objects, reducing fatigue, muscle strain, and risk of repetitive strain injury.

HVAC—Offers superior cut protection, enhanced wet/dry grip, and advanced dexterity while working with ducts and other sharp/jagged materials. Hook-and-loop neoprene closure with pull tab for tight fit.

Multipurpose Heavy-Duty—Versatile glove is engineered to deliver ultimate cut, puncture, and abrasion resistance for the most demanding jobs in construction, demolition, sheet metal, and masonry. Intercept Technology employs stainless steel and Kevlar fibers to protect against snips, screws, and sheet metal. Rugged construction features reinforced ridges for added palm and knuckle protection. Adjustable wrist closure with pull tab and ID nameplate.

Heavy Laborer—Ergonomic, breathable glove provides superior comfort and protection from punctures, cuts, and abrasions during extended periods handling concrete, wood, or metal debris. Intercept Technology employs stainless steel and Kevlar fibers to protect against snips, screws, and sheet metal. Reinforced gel-padded palm absorbs impact and vibration.

General Industry—Stretch armor yarn combines Kevlar and Intercept Technology to protect against snips, screws, and sheet metal to deliver excellent protection in general construction, installation, HVAC, and industrial tasks.

HyFlex Cut-Resistant Palm-Coated Gloves

- For dry and light oil environments

Gloves are designed to balance comfort, protection, and dexterity for a wide range of industrial applications. **Foam nitrile coating** provides abrasion resistance and a firm, secure grip. **Polyurethane coating** offers tear and abrasion resistance and increases glove life.

Nylon/Spandex Lining—Style 11-731 has a lightweight 18-ga. liner that offers flexibility and good tactile sensitivity.

Style 11-550 liner is a blend of para-aramid, spandex, and nylon that offers comfortable all-day wear and heat protection up to 212°F.

Dyneema Lining—Style 11-518 is a lightweight 18-ga. glove that offers a breathable, barehanded feel. Dyneema Diamond Technology provides superior comfort, dexterity, and protection for precision handling and assembly of sharp, ultra-fine parts.

Style 11-435 antistatic seamless plaited glove combines glass fiber and nylon yarn with Dyneema fiber for cut protection. Eco-friendly coating provides enhanced dexterity and comfort.

HPPE Lining—Style 11-927 offers enhanced protection and a consistent grip on objects coated with lubricants in a wide range of viscosities. Oil-repellent Ansell Grip technology with ¾-dip geometry grips in medium-duty oily applications.

Style 11-531 has a lightweight liner and ZONZ Comfort Fit technology, with special yarn and stitching design. FORTIX abrasion resistance coating.

Style 11-644 features Ansell cut protection technology that combines a proprietary blend of high-performance polyethylene yarn (HPPE) with a polyurethane coating for enhanced cut protection, wear life, and comfort with a high level of dexterity.

Style 11-727 is made from ultralight, breathable fabric with excellent fingertip sensitivity for precise secure handling of parts or components.

Style 11-561 is thin and lightweight to give flexibility and comfort, while protecting hands from abrasion and cuts. Skin-friendly and certified harm-free.

Style 11-651 is a medium-duty glove with a seamless 13-ga. liner made with INTERCEPT cut resistance technology. Elasticized knitted wrist for snug fit.

Kevlar Lining—Style 11-500 delivers excellent cut protection and high tactile sensitivity with a breathable stretch liner. Black palm coating masks dirt.

Style 11-510 features proprietary nylon and Kevlar zonal plaiting on palm and back for flexibility, comfort, and durability with reinforced abrasion resistance. ZONZ comfort fit technology and ComfortFlex cuff result in more breathable, maneuverable nitrile gloves.

Kevlar/Stainless Steel Lining—Intercept Technology yarn blend offers superior cut resistance, light weight, and outstanding dexterity. Resists heat and molten splashes. Excellent for handling glass, sheet metal, wood, concrete blocks, and other jobs in construction, metal fabrication, and assembly.

Style 11-501 stretch liner fits bare-hand close, to reduce the risk of snags and provide outstanding dexterity.

Style 11-511 enhanced cuff overedging increases wrist elasticity.

Style 11-515 high-visibility materials ensure fingers can be seen while installing glass and doing other tasks.

Needlestick-Resistant Mechanic's Gloves

Provide protection against needlesticks, abrasion, lacerations, and cut hazards for at-risk workers including law enforcement, hospitality, sanitation, and recycling staff.

Clutch Gear—Hi-Viz stretchable nylon back with Sure Grip palm patches. K2456 palms are lined with Punkban combined with Kevlar fiber for superior puncture resistance. K2457 is fully lined with the same material - palm and back.

Hercules NSR 3041—Made of layered SuperFabric material. Palm has silicone gripping surface.

PointGuard Ultra 4041—Layered SuperFabric material on enhanced areas. Knuckle padding on back of hand for impact protection and patterned silicone palm grip.

ThornArmor 3092—3 layers of SuperFabric in the durable TP-X palm. Breathable HexVent panel on back of hand for comfort.

RINGERS GLOVES® MCR SAFETY

Cold-Condition Insulated Mechanic's Gloves

- Thinsulate insulation keeps hands warm in extreme conditions

RINGERS GLOVES

Insulated thermal gloves combine a waterproof barrier and impact protection to provide maximum comfort and protection in the most demanding environments. Developed with Ringers' F3 Technology for superior dexterity and employ tough TPR impact protection. Touchscreen compatible index, middle and thumb tips.

Super Hero— Medium-duty gloves have added palm PVC patches. Extended cuff with gaiter closure.

Zero—Heavy-duty gloves have a silicone dot palm with PVC grip patch system, providing excellent protection and grip under any conditions. Gaiter closure increases safety and security.

Roughneck—Heavy-duty gloves with synthetic leather palm and grip patch system. Extended neoprene wrist closure with TPR pull tab.

Sub-Zero—Heavy-duty gloves have leather 2-layer palm with PVC grip patch system. Gaiter closure increases safety and security.

MCR SAFETY

Waterproof/windproof barrier and hi-vis snow/water resistant back-of-hand fabric keep hands warm and dry. Inner elastic snow/ice cuff keeps moisture out. MAXGrid material on the palm provides firm grip in dry, wet, and oily conditions. Touchscreen friendly fingertips.

Glove Coating and Lining Materials

COATING MATERIALS

Foam Nitrile—Cushioned base with a tacky surface to provide a secure positive grip when twisting and turning objects. The most breathable nitrile with better flexibility and less resistance to water and oil than smooth nitrile.

Foam Latex—Provides a good sense of touch and a spongy, tacky surface for a better grip than standard latex when twisting or turning parts. More breathable, flexible, and has better grip than latex, but is less water resistant.

Latex—Natural rubber latex has elasticity that provides resistance to abrasion, punctures, and tears with a safe, secure grip. Can be used over a wide range of temperatures to provide a good grip when handling wet and dry parts. Protects against weak acids, alcohols and detergents.

Microporous Nitrile—Provides better breathability and grip for twisting and turning than standard nitrile. Less breathable and has less gripping power than foam nitrile.

Nitrile—A synthetic rubber that resists snags, punctures, abrasion, and cuts, and provides resistance to acids, some organic solvents, oils, grease, and fuels. Offers a good grip when handling dry, greasy, and oily parts. A good option for people with latex allergies.

Polyurethane—Flexible synthetic material provides abrasion resistance and good grip. Provides good tactile sensitivity and dexterity and good grip in dry and light oily conditions and over a wide range of temperatures.

Polyurethane/Nitrlie—Combination of nitrile and polyurethane that provides durability, abrasion resistance, softness, and dexterity.

PVC—Synthetic thermoplastic polymer provides abrasion resistance, tactility, and dexterity combined with wet and dry grip. Remains flexible at colder temperatures and provides good durability and resistance to chemicals.

LINING MATERIALS

Bamboo—Lighter, softer, and more absorbent than cotton or synthetic materials. Breathable material wicks moisture away from the skin. 100% natural bamboo knit shells are inherently strong, antibacterial, biodegradable, and provide UV protection.

Cotton—Lightweight, soft material is comfortable and breathable for extended wear.

Dyneema—Polyethylene-based fiber provides superior cut and abrasion resistance. Lightweight for enhanced dexterity and sensitivity.

HPPE—High-performance polyethylene material has high tensile strength and provides high levels of cut and abrasion resistance.

Nylon—Lightweight lining provides high tensile strength and dexterity.

Nylon/Spandex—Lightweight lining provides high tensile strength and dexterity. Spandex blend improves stretch and flexibility.

Polyester—Durable, economical lining wicks moisture away from the skin.

Nitrile-Coated Knit Gloves

- For dry and light oil environments

Light-duty gloves are designed for dexterity, flexibility, a secure grip, and to provide protection from abrasion, snags, cuts, and punctures. Durable synthetic nitrile coating resists grease, oils, and aromatic and chlorinated solvents. Suitable for wearers with latex allergies. Flat-dipping curves the gloves like a hand for reduced hand fatigue and to help stay productive in a wide variety of jobs. Comfortable knit wrist helps keep dirt and debris out of the glove.

Smooth coating offers excellent fingertip and hand sensitivity. Foam coating has a spongy texture to improve grip when twisting and turning parts. Sandy coating has a rough surface for stronger grip.

Nitrile-Coated Gloves

- For dry and light oil environments

Easy Flex—Finger and palm coating lets the back of the hand breathe while protecting the working area. Gloves are snag-, cut-, and puncture-resistant. Nitrile coating repels oil and grease for a good grip. Gloves mold to the shape of the hand for a more relaxed, comfortable fit.

Hycron—Heavy-duty coating is a proprietary nitrile formulation that offers superior resistance to snags, abrasion, and punctures. Rugged gloves are stronger and more flexible than PVC and 3 times more durable than heavy-duty leather. Provide an excellent grease/oil barrier and will not degrade with time.

HyLite—Comfortable natural hand shape is easy to wear for a long workday. Proprietary nitrile coating is flexible, repels oil, and has good mechanical resistance to abrasion, cuts, punctures, and tears. This alternative to cotton, light leather, and PVC is silicone-free to help ensure metal sheets stay clean.

Hynit—Flexible gloves have a fully impregnated, proprietary nitrile coating that provides excellent abrasion resistance and repels oil, grease, and dirt. Slip-on cuff for easy on/off. D1504 has perforated back-of-hand.

Impact-Resistant Mechanic's Gloves

- Adjustable slip-on cuff

General Utility—Foam-padded inner palm with double-stitched synthetic leather reinforcements on palm, fingers, and saddle.

Vibration Impact—PTFE-treated palm repels oil and water and has 6 gel-padded reinforcements. Neoprene knuckle protection.

EXO Motor Impact—Features full back-of-hand padding with a breathable expansion chamber. Foam-padded, embossed synthetic leather palm, reinforced fingertips. TPR cuff puller and hook-and-loop closure.

Super Duty—Flexible Duraclad reinforcements cover the palm, fingers, thumb, and saddle. Hook-and-loop wrist strap and terry sweat wipe. TPR protection for the back of the hand and fingers.

EXO Project Impact—Vibration-absorbing palm, TPR impact protection, and a breathable expansion chamber. TPR cuff puller, and a hook-and-loop closure secures it to your wrist.

Ranchworx—Made of Bullwhip leather with Kevlar reinforced saddle and thumb. Seamless fingertips and flexible TPR finger and knuckle protection with extended cuff.

High-Visibility Impact-Resistant Mechanic's Gloves

Industrial Impact Cotton Corded—Cotton cording provides all-around grip at an economical price for oil and gas, mining, demolition, heavy construction, and rigging applications.

EXO Industrial Athlete Hi-Viz Impact—Performance-fit gloves for demanding jobs have a vibration-reducing reinforced palm and all-around impact protection, plus reinforced fingertips. Reflective accents and hi-viz colors help boost visibility and safety. Secure hook-and-loop wrist closure.

Industrial Impact Rigger—Duraclad reinforced palm, rope channel, and thumb boost grip and durability for heavy industrial environments, oil extraction and refining, mining, demolition, and rigging.

KONG Dexterity Super Grip—Proprietary Diamondclad silicone-fused palm offers nonslip performance and maximum dexterity on wet and oily surfaces. Designed for complete hand and finger impact protection in rugged oil and gas environments. Abrasion-resistant materials are used in the reinforced saddle and thumb.

KONG Oil and Waterproof—Gloves also are windproof for protection and comfort in harsh conditions on the rig or in the fields. Breathable material lets sweat evaporate to help keep hands dry and warm. Proprietary palm material offers superior abrasion resistance. Hi-viz palm and back of hand, multilayer microfleece insulation, and impact-resistant knuckle, finger, and metacarpal protection round off the rugged design.

KONG Original SDX2—Developed specifically for the oil and gas industry. Breathable nylon back with dotted palm for firm grip and abrasion resistance.

KONG High Dexterity Waterproof—Synthetic suede dotted palm offers firm grip in any conditions. Waterproof insert with polyester lining.

Vibram Rigger—Antistatic, antisaturation gloves are made for extreme durability and maximum grip when handling ropes and cables. The design features a 3-D beveled rope channel to boost directional grip, and impact-protective base of palm.

Vibram O.B.M. and O.B.M. XOR—Oil-based Mud Palm (O.B.M.) line is made for dirty, greasy jobs, with a tread pattern designed to channel high-viscosity lubricant and cold-temperature flexibility. The impermeable palm has an impact-protective base. Fingertips are designed for maximum grip on saturated tools and equipment. Maximum dexterity also is designed into these extremely durable gloves. O.B.M. gloves have PTFE protection on shell fabrics for increased resistance to oil and water. O.B.M. XOR (Extreme Oil Resistance) have a nitrile-coated cotton shell good for saturated environments.

Leather Glove Information

GRADE

Leather Grade—As a natural product, leather material can vary in color, thickness, and response to water, heat and cold. **Standard** leather is usually cut from the shoulder of the animal hide, where the skin is not as soft as premium leather. It has more apparent flaws or surface marks than premium leather. **Premium** leather is normally cut from the belly of the animal hide making it softer than standard grade leather. It has fewer scar marks or other blemishes. Leather cut from the side and shoulder of the animal offers high durability. Full- or top-grain leather comes from the external side of the hide and is typically smooth. Split leather or suede is more economical, but not as durable as grain leather.

MATERIALS

Cowhide—Durable and comfortable leather that maintains a good appearance over time. Excellent abrasion resistance and breathability.

Deerskin—Soft, lightweight leather that conforms easily to the hand for high comfort and flexibility. It has a longer lifespan than cowhide and is warmer than other leathers. Suitable for jobs where optimal dexterity is important.

Goatskin—Soft and supple leather with excellent dexterity. It has better abrasion-, tear-, and water-resistance than other leathers.

Pigskin—Flexible leather that softens with use, withstands moisture without becoming stiff, and is more breathable than other leathers.

THUMB STYLES

Keystone—Provides higher levels of comfort, durability, and mobility than other thumb styles. An inset thumb has a separate piece of fabric to allow the thumb to rest in a natural position for increased dexterity.

Wing—Thumb is sewn out to the side and welts are added to the seams for added strength and to relieve some stress on the palm. Offers comfortable gripping and free thumb movement.

Straight—Has a continuous piece of fabric extending straight from the wrist with a sewn seam around the thumb. Has less mobility than other thumb styles.

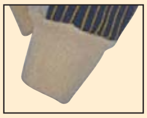
CUT STYLES

Gunn—Seamless back for greater comfort; the palm side of the middle 2 fingers is sewn into the palm at the base of the middle 2 fingers. Reinforced seam with a welt increasing gloves' durability and wear life.

Clute—Parallel seams on back of glove made from a continuous piece of leather for greater ease of movement, comfortable gripping, and a roomy fit.

CUFF STYLES

Knit Wrist



Safety—2" cuff length

Gauntlet—Extended 4" cuff

Slip-On

Shirred Wrist

Leather Driver's Gloves

- Full leather palm and back
- Gunn cut

Comfortable work gloves cover the entire hand with excellent abrasion resistance and breathability. Lined gloves offer thermal protection and comfort for hot or cold working conditions.

H6336 and J4938 have extra-strong Kevlar stitching that is stretch resistant to help keep the seam tight.

J4938 has thermoplastic rubber finger and back-of-hand impact protection.

Leather Driver's Gloves

- Full leather palm and back
- Gunn cut
- Unlined
- Shirred slip-on cuff

Cowhide gloves offer a good balance of abrasion resistance, dexterity, durability, and comfort for everyday general maintenance, construction, and industrial tasks. H4152 has cowhide palm and split leather back. J3520 has double palm to increase strength and wear resistance. J3527 is sewn with Kevlar.

Deerskin gloves are naturally soft and comfortable for extended wear.

Goatskin gloves are a very supple leather with a soft feel and excellent flexibility.

Pigskin gloves offer excellent abrasion resistance and retain their softness, even after exposure to water and moisture.

MCR SAFETY

Leather Palm Work Gloves

Heavy-duty gloves provide protection and abrasion resistance for demanding work environments. Leather palms and breathable back material for comfort. Gloves with hi-vis colors have reflective stripes on the back to increase safety when working in low-light or high-traffic locations. Pigskin gloves won't stiffen after getting wet; ideal when working in damp and wet conditions.

D1583, D1585, and J3484 are sewn with extra-strong Kevlar thread.

J3479 and J3484 have double leather palms for added protection.

D1699 and D1707 are slip-on with adjustable hook-and-loop closure at wrist.

Condor MCR SAFETY

Heat-Resistant Knit Gloves

Loop-in style gloves reduce snags and increase longevity. Loop-out style protects against abrasion and provides nonslip grip.

COTTON TERRY CLOTH GLOVES

Reversible, seamless gloves provide 4 wear surfaces. Insulate against elevated temperatures.

KEVLAR/COTTON BLEND TERRY CLOTH GLOVES

Reversible and seamless with knit wrist.

KEVLAR COTTON LINER TERRY CLOTH GLOVES

Cotton interior absorbs moisture. Ambidextrous and seamless.

NOMEX/KEVLAR GLOVE

Ambidextrous glove has cotton lining.

C-TREAD GLOVES

Ambidextrous gloves have a C nitrile coating to improve grip. Inner knit layer bonded to waffle design. Cushioned outer cotton/poly layer resists heat. 1AHE9 features a vaporproof membrane. 2ENE3 is uncoated.

KEVLAR C-TREAD COATED GLOVES

Ambidextrous gloves have a C nitrile coating to improve grip. Inner knit layer bonded to waffle design. Kevlar/cotton blend outer layer protects against cuts and slashes.

COATED HEAVYWEIGHT COTTON BLEND GLOVES

Glove-within-glove design. Nitrile C coating for added thermal protection, grip, and abrasion resistance. Ambidextrous with seamless knit construction.

HEAVYWEIGHT TERRY CLOTH GLOVES

Lined, reversible gloves have extra heavyweight material for extended wear and heat protection.

FLAME-RETARDANT TERRY CLOTH GLOVES

Ambidextrous, lined gloves have extra heavy-weight material.

MCR SAFETY MEDIUMWEIGHT

Seamless reversible gloves resist heat and abrasion for general purpose applications.

MCR SAFETY HEAVYWEIGHT

Durable fabric protects hands from heat and cut hazards.

Choose the Right Ergonomic Products to Help Prevent Injuries

Using **ergonomic principles** that design the workplace to accommodate employees can help in **avoiding Work-Related Musculoskeletal Disorders** (WMSDs). MSDs are soft tissue injuries that affect the blood vessels, ligaments, muscles, nerves, and tendons.

Investment and Return
Simple and relatively inexpensive workplace modifications such as adjustable work platforms, footrests, or chairs can aid in major reductions in workplace stress.

Corrective Measures
A reduction in workplace stress can help decrease lost work days and improve productivity and team member morale. Employee training on ergonomic issues can aid personnel in identifying problem areas within their work area that may require ergonomic improvements.

Employee Evaluation
Receiving feedback from team members regarding their ergonomically-designed tools and furniture can help ensure the equipment meets their specific requirements.

Back Supports

Elastic Knit Supports—Elastic construction provides gentle compression and warmth for a more comfortable fit.

Spandex Supports—Spandex fabric is breathable and provides firm support for a more comfortable fit. D0581 and D0588 feature stretchable bias binding for greater flexibility, a wider range of motion, and a more comfortable fit.

Weight-Lifter's Style Support with Lumbar Pad—Feature more support, less flexibility, and a restricted range of motion compared to other back supports. Ideal for use in heavy lifting applications.

Establishing an Electrical Safety Work Program

OSHA 29 CFR 1910.333(a) states that employers must employ safety-related work practices to prevent electrical shock or other injuries resulting from either direct or indirect electrical contact. The **NFPA 70E Standard for Electrical Safety in the Workplace** requires employers to perform an **Electrical Arc Hazard Assessment** for each situation.

A hazard assessment must be performed using 1 of the following 2 methods:

1. Incident Energy Analysis 2. Arc Flash PPE Category

The **Grainger Online SafetyManager® System** offers NFPA 70E Electrical Safety Training - 2015 Series to help you keep your workplace in compliance with the NFPA 70E Electrical Safety standard. Access our library of **easy-to-follow training courses** (subscription required), including Training Module 4: Personal Protective Equipment and Clothing requirements, as well as **helpful technical articles** at **grainger.com/safetymanager**

Protective Clothing and Personal Protective Equipment Table 130.7(C)(16)

Arc Flash Category*	Minimum ATPV Rating cal./cm²	Required Garments	Required Protective Equipment
1	4	Shirt (Long Sleeve) and Pants (Long) or Coveralls; Flash Suit Hood or Faceshield; Jacket, Parka, Rainwear, or Hard Hat Liner (AN)	Hard Hat; Safety Glasses or Goggles (SR); Hearing Protection (Ear Canal Inserts); Heavy Duty Leather Gloves; Leather Footwear (AN)
2	8	Shirt (Long Sleeve) and Pants (Long) or Coveralls; Flash Suit Hood or Faceshield and Balaclava; Jacket, Parka, Rainwear, or Hard Hat Liner (AN)	Hard Hat; Safety Glasses or Goggles (SR); Hearing Protection (Ear Canal Inserts); Heavy Duty Leather Gloves; Leather Footwear (AN)
3	25	Shirt (Long Sleeve) (AR); Pants (Long) (AR); Coveralls (AR); Flash Suit Jacket (AR); Flash Suit Pants (AR); Flash Suit Hood, Gloves, Jacket, Parka, Rainwear, or Hard Hat Liner (AN)	Hard Hat; Safety Glasses or Goggles (SR); Hearing Protection (Ear Canal Inserts); Heavy Duty Leather Gloves; Leather Footwear (AN)
4	40	Shirt (long sleeve) (AR); Pants (Long) (AR); Coveralls (AR); Flash Suit Jacket (AR); Flash Suit Pants (AR)	Hard Hat; Safety Glasses or Goggles (SR); Hearing Protection (Ear Canal Inserts); Heavy Duty Leather Gloves; Leather Footwear (AN)

** 1 of the 2 methods used to determine the PPE category for a job task. AN = As Needed (Optional), AR = As Required, SR = Selection Required.*

Arc Flash & Flame-Resistant Apparel Materials

Arc flash materials resist burning and melting and are self-extinguishing.

Canvas is a durable woven fabric.

ComforTouch is a cotton/nylon blend that is breathable and durable.

CoolTouch2 is a breathable blend.

Cotton is breathable and flexible.

DuraStretch is a soft cotton/nylon blend that stretches with movement.

Excel FR is a breathable cotton.

GlenGuard wicks moisture to keep workers cool.

Indura is a cotton material that is comfortable, breathable, and resistant to molten iron splash.

Inherent Blend and Treated Cotton is a durable antistatic cotton that wicks moisture to keep workers cool.

Modacrylic is breathable and wicks moisture to keep workers cool.

Nomex is durable and breathable.

Nomex IIIA is a Nomex/aramid blend that is breathable and durable. It has better static dissipation than standard Nomex.

Nylon is strong and smooth and has excellent resistance to wear and abrasion.

Protera is lightweight and breathable.

PVC is a plastic that repels water.

RevoLite is a carbon fiber blend that provides high thermal protection.

UltraSoft is a cotton/nylon blend that is breathable, durable, and comfortable.

NATIONAL SAFETY APPAREL® SALISBURY by Honeywell CPA CHICAGO PROTECTIVE APPAREL

Arc Flash & Flame-Resistant Clothing Kits - Category 2

- Meet NFPA 70E standards
- Available in sizes from S to 4XL at Grainger.com

Kits include a selection of garments and headwear that protect workers from burn injuries in areas with sparks, open flame, and other potential fire hazards.

See Grainger.com for detailed descriptions of each kit's contents and garment features.

H0471

D1685

Arc Flash & Flame-Resistant Coveralls

- Meet NFPA 70E standards
- Available in sizes from S to 4XL at Grainger.com

Protect workers from arc flash burns that can occur when working near electrical hazards. Coveralls are a single garment worn over personal clothing or base-layer flame-resistant clothing to provide continuous coverage over the worker's front, back, arms, and legs. **H0471** features high-visibility stripes at wrists, ankles and across the back.

Arc Flash & Flame-Resistant Headwear

- Meet NFPA 70E standards

Provide protection for the head and neck from burns that can occur when working near electrical hazards.

Balaclavas provide 360° coverage around the head and neck and cover gaps around the collar. Usually worn under headwear and in conjunction with eye and face protection.

Balaclava 41H940

Balaclava 2NNJ8

Beanie 4FEZ9

Knit Hat 4FEZ8

Liner fits close to the head and can be worn under a hard hat to protect the head, ears, and neck while leaving the face uncovered.

Beanies and Knit hats absorb sweat and keep the head and ears warm.

Arc Flash & Flame-Resistant Faceshields

- Meet NFPA 70E standards

Protect worker's head and face from burns while providing clear visibility to work area and surroundings.

Faceshields surround the face and extend slightly under the chin. 458P09 and 458P11 have a transparent chin.

Head Protection Kits include hard hats with an integrated visor to protect workers from arc flash and impacts to the head. The visor flips up to provide unobstructed vision when protection is not required.

Ventilated 56PG52

Lift Front 54YR32

Standard 54YR52

Arc Flash & Flame-Resistant Hoods

- Meet NFPA 70E standards

Protect worker's head, face, and neck from burns that can occur when working near electrical hazards. Hoods provide 360° protection and have a built-in faceshield.

Lift Front hoods have a faceshield that can be tilted up so workers don't have to remove the entire hood. 56PH78 and 56PG65 include a flashlight kit.

Standard hoods cover the head and face with a transparent faceshield for clear visibility.

Ventilated hoods have an integrated system that provides airflow to reduce heat stress.

Electrical Insulating Gloves

- Meet ASTM D120 specifications and NFPA 70E standards
- Available in glove sizes from 7 to 12 at Grainger.com

Rubber Insulating Gloves are made of dielectric natural rubber to protect workers when working near electrical hazards, Voltage Class is the maximum use voltage for the glove. Type I gloves are not ozone-resistant. Type II gloves are ozone- and UV-resistant. Workers should use a voltage Class and Type rating that meets their worksite requirements. See Grainger.com for detailed information on Voltage Class and Type.

Leather Protectors are worn over rubber gloves to protect from pinpricks, tears, and abrasion. They do not provide protection against electrical shock when worn alone.

Glove Kits include a pair of electrical-insulating rubber gloves and a pair of leather protector gloves. Also include glove bag where noted.

Arc Flash Protection Equipment

Enclose or insulate against electrical hazards to help prevent exposure to electric arcs and reduce the risk of injuries to workers.

Arc Protection Blankets provide barrier protection from exposure to explosive electrical arcs and flashes.

Shock Protection Blankets cover energized components to protect workers from electrical hazards and provide a protective barrier on electrical equipment located in cubicles, switchboards, and substations.

Grounding Sets protect workers from electrical shocks and prevent damage to equipment.

Electrical Sticks and Rescue Hooks protect workers from electrical charges when checking energized equipment and responding to emergency situations. Hot switch sticks can be used to help check transmission lines, power distribution equipment, down power lines, fuses, and load break connectors. Rescue hooks help withdraw injured workers out of a hazardous area.

Insulating Line Hoses cover high-voltage lines to prevent against accidental contact with live wires. Type II ozone- and UV-resistant rubber maintains flexibility in cold weather.

Heat-Reflective Aluminized Clothing

- Reflects up to 95% radiant heat

STEEL GRIP

5-ply Dual Mirror construction provides wear resistance, reflectivity, and resistance to molten metal splash. 15-oz. aluminized PFR Rayon (ARL) fabric is used for short-term exposure. 19-oz. aluminized Thermonol (ATH) is a Kevlar/fiberglass fabric for long-term contact.

Jackets

Feature laydown collar and semiraglan sleeves. Covered front snaps with wrist snap closure. Seams are serged and stitched with Kevlar.

Hoods and Replacement Faceshield

Include swing-open, clear 7" x 11" Lexan facepiece. Adjustable ratchet suspension.

Gloves

Kevlar® blend gloves have an aluminized back to reflect radiant heat and a wool lining for thermal protection and protect up to 900°F intermittent handling.

Bib Aprons

Adjustable web neck and waist straps attach with clip snap and D-ring fasteners. All edges are serged.

NSA

Aluminized Carbon Kevlar fabric provides excellent thermal insulation and maximum protection against molten metal splash, including molten iron and aluminum.

Coats

Feature front snap closures with back flap and underarm eyelets for ventilation. Split sleeve with snap closures.

Hood

Fitted hood allows hard hat use. Extended bib provides chest, back, and shoulder coverage. Adjustable leather shoulder straps fasten under armpits and secure the hood in place. Lens/faceshield clips on aluminum frame. Features a gold film that radiates heat.

Sleeves

Snap wrist closure and open top.

Gloves

Heat- and abrasion-resistant gloves with open-palm style and reversed wool lining for thermal protection.

Bib Apron

Adjustable leather straps on the neck and at the waist fasten with a buckle and snap to secure the apron in place.

STEINER

Flame-Resistant Clothing

Sleeve—Comfortable and washable, this flame-resistant sleeve helps protect your upper arm from sparks in light welding applications. Fits easily into welding glove cuffs and has an elastic top and wrist for a more comfortable fit. The anti-static Weldlite fabric is rot and mildew resistant, and it preserves its flame resistance for up to 50 home or 25 commercial washings. Sold by the pair.

- Meets ASTM D6413-13

Jacket—This cool, comfortable, and washable jacket offers protection from sparks in light welding applications. Relaxed fit helps provide all day comfort, and it has adjustable snap wrists and a large inside pocket. The anti-static Weldlite fabric is rot and mildew resistant, and it preserves its flame resistance for up to 50 home or 25 commercial washings. The leather-reinforced, black anodized snaps are non-reflective.

Condor

Leather Welding Clothing

Made from Kevlar-sewn select cowhide. Steel rivet reinforcements are added to critical areas for increased wear.

JACKET

30" length provides full protection. Features underarm and back vents. Satin arm and shoulder lining for easy on/off.

APRONS

1-pc., split cowhide waist aprons provide long-lasting waist-to-knee protection.

BIB APRON

Provides chest-to-knee protection. Secured around the neck and waist with webbing and snap buckle.

DETACHABLE BIB

Extends to the waist. 1-pc. select cowhide bib attaches to cape sleeves (sold separately) with 4 snaps. Secured around the waist with belt and snap buckle.

BIB APRONS, SPLIT LEG

Premium cowhide aprons have 2 adjustable nylon straps per leg.

CHAPS

Adjustable-waist (20" to 50") leather chaps have snaps on each leg.

SLEEVES

Secure with snaps at wrist and bicep with an adjustable strap. Priced and sold per pair.

CAPE SLEEVES

Cover arms, shoulders, and upper torso.

WELDING CAP

100% cotton reversible cap with elastic sides and soft bill. Patterned on 1 side and a solid black color on the other side. Washable.

Carbonized-Fiber Flame-Resistant Clothing

Carbonized fiber provides the best protection available as a single-layer garment. Performs better than traditional flame-retardant cotton material.

Jacket—Lightweight modern design with adjustable stand-up mandarin collar and a relaxed full-cut fit and elongated front for greater freedom of movement. Breathable and washable. With 2 pockets. Large inside pocket and snap front closure. Nomex sewn.

Bib-Style Apron—Combines heavy-duty protection and durability with lightweight comfort and dexterity. Sewn with Nomex thread. Features neck strap and adjustable waist straps.

Sleeves—Knit sleeves 4FRT5 and 4FRT6 significantly increase thermal protection in high-heat applications. Woven sleeves 4FRT1 to 4FRT4 protect from sparks, splatter, and flame in light to medium welding applications.

Flame-Retardent Cotton Welding Coveralls

Provide protection from light sparks and have continuous coverage that prevents gaps at the waist when moving or bending. Relaxed design allows coveralls to be worn over work clothing and for a comfortable fit. Weldlite fabric can maintain flame resistance for up to 50 home washings or 25 commercial washings. Include an inside chest pocket, 2 rear patch pockets, and 2 front swing pockets with side slits for access to pants pockets. Snap front closure. Suitable for use in light welding applications.
